Job Title: Data Analyst

Job Summary

We are looking for a detail-oriented Data Analyst to collect, process, and analyze data to support business decision-making. The ideal candidate should be strong in data analysis, visualization, and problem-solving.

Key Responsibilities

- Collect, clean, and analyze large datasets
- Create dashboards and reports using visualization tools
- Identify trends, patterns, and insights from data
- Support business teams with data-driven insights
- Maintain data accuracy and documentation
- Work with databases and write optimized queries

Required Skills & Qualifications

- Bachelor's degree in Computer Science, Statistics, Mathematics, or related field
- Strong knowledge of SQL and Excel
- Experience with Python/R for data analysis
- Familiarity with data visualization tools (Power BI, Tableau, etc.)
- Basic understanding of statistics
- Good communication and analytical skills

Preferred Qualifications

- Experience with cloud platforms
- Knowledge of machine learning basics
- Prior experience in a similar role or internship

Job Type: Full-time / Internship / Contract
Location: On-site / Remote / Hybrid
