

Mayank Parashar

SOFTWARE DEVELOPMENT ENGINEER 2

☎ +91 8285904998 | ✉ mayankparashar1257@gmail.com | in mayank-parashar-367593130

About me

Experienced software engineer with 4+ years of expertise in backend development. Specialised in designing, developing, deploying scalable and reliable distributed systems. Strong background in data structures and algorithms.

Skills

Language and Framework	Python, GoLang, Java, Django, Gin
Databases	Postgres, Mysql, MongoDB, Snowflake, Redis
Tech Stack	AWS, Kafka, Celery, Docker, kubernetes, grafana/loki, Grpc, GitHub Actions, Git

Experience

Ocrolus Inc

SOFTWARE DEVELOPMENT ENGINEER 2

Oct 2021 - July 2023

- **Developed and Designed fraudulent document detection service from scratch**, aimed at identifying suspicious documents. Assisted banks in saving money on bad loans, resulting in significant time and cost savings on fraudulent applications. Have processed more than **25 Million** documents
- Redesigned the service to run sources **Asynchronous** using **kafka** to make it instant, helps to reduce our average result wait time from **5 mins to less than 15s**. Currently this service handles over **50k documents** per day
- Engineered solution to mitigate race conditions occurring after **RedLock(using redis)** released due to timeout in a **distributed service** by utilizing signals to ensure that process terminated gracefully, eliminating potential background processing issues.
- **Developed custom migration manager for seamless releases** for our rapidly evolving service facilitated the controlled visibility of new features and ensured accurate data cleanup, enabling us to test and release new functionality without disrupting the client experience
- Developed a generic template builder identify paystub origin using a YAML configuration, which simplified the onboarding process for new templates **reducing TAT** to add new template from **hours to few minutes** and skip **10%** of the total paystubs

Cyware Labs

SOFTWARE ENGINEERING

Nov 2020 - Oct 2021

- **Designed and Deployed three microservices** policy engine, enrichment service and confidence score microservice. use batch processing and async polling between services to minimise resource utilisation and eliminating continuous socket connection.
- **Policy Engine:** generic engine to evaluate bundles based on custom set of rules added by user
- **Enrichment:** design and develop enrichment micro service help to reassess intelligence IOC from third party, support sync and async based on client quota, API throttling to avoid API threshold
- **Confidence Score:** design and develop complex module to generate confidence score of more than a million Indicators and IOC in less than 30 mins

HashedIn Technologies

SOFTWARE ENGINEERING

Feb 2019 - Nov 2020

- **Glyd/Treo Mahindra:** A cab service based on electric transport for small distance. Develop whole Trip flow with using FSM.
- Development and optimization of a highly scalable Booking Engine for finding best ride for commuter
- Utilization of Node.js for high I/O Bound process like Location service, notifications
- Use combination of Django, PostgreSQL, Node, Redis for developing a high scalable platform for commute service

Achievements

Finalist	Techgig Code Gladiators 2018 (in top 200 in 2 lakh contestants)
Google CodeJam	Qualified for Google CodeJam 2018
Code Auctor 2018, Enigma 2017	Winner of Intercollege Coding Contests

Education

AKTU

BACHELOR OF TECHNOLOGY

2015 - 2019

- *Computer Science and Engineering,*
