-
- Over 7.2 years of professional IT experience in the Salesforce Platform as a Developer and an Administrator.
 - Worked on Salesforce Platform including System analysis, design, development, testing & deployment.
 - Extensive Experience working on the Salesforce Products Sales Cloud, Service Cloud, and Community Cloud & Developing Custom Applications on the Salesforce Platform.
 - Experience Working in CRM business processes Campaign Management, Lead Management, Territory Management, Order Management, Account Management, Case Management, and merging management in a multi-tier environment.
 - Experience in Designing and Developing Data Models using Lookup, Master Detail, Self, Hierarchical & Many To Many Relationships.
 - Experience in creating Custom Objects, Custom Fields, Custom Tabs, Page Layouts, Record Types & Business Processes.
 - Experience in automating business logic using Auto Number Fields, Complex Formula Fields and Roll Up Summary Fields.
 - Experience in validating Data using Duplicate Rules, Validation Rules & Triggers.
 - Experience in Importing & Exporting Data using Tools Like Import Wizard and Data Loader.
 - Experience in Automating Business Processes Using Workflow Rules, Visual Work Flows, Process Builder & Triggers.
 - Experience in Automating Approvals using Approval Processes.
 - Experience in creating reports and dashboards and customizing them as per user requirements.
 - Experience in Creating Custom Report Types, Historical Trending Reports, Reporting Snapshots, Report Charts & Dynamic Dashboards.
 - Experience in Implementing Security and Sharing rules at Object, Field and Record levels for different users in the organization.

- Experience in Creating Custom Settings to create a Custom Set of Data and use this Data in Formula Fields, Validation Rules, Flows, and Apex codes.
- Experience in Creating Custom Meta Data Types to define Mappings, Business Rules, Master Data, and Protected Information and refer them in Formula Fields, Validation rules, Flows, Process Builder, and Apex.
- Experience in Configuring Email to Case, Web to Case, Web to Lead, Assignment Rules, Escalation Rules, Auto-Response Rules, Queues, Live Agent Setup & Knowledge Base.
- Experience in Writing efficient SOQL and SOSL for Querying and Searching Data from the Lightning platform.
- Experience in Writing Apex Classes & Triggers following Best Practices to automate Business Processes.
- Experience in Writing Apex Unit Tests for Classes, Controllers, and Triggers to generate Code Coverage.
- Experience in Developing Visualforce Pages and Visualforce Components to build Dynamic User Interfaces.
- Worked in modifying Visualforce pages to be supported in Lightning Experience and good understanding of Lightning mode and its features.
- Experience in Developing Lightning Aura and Lightning Web Components.
- Experience in Using Salesforce DX Environment and having Good Knowledge of Salesforce CLI Commands.
- Experience in Using Salesforce Command Line Interface for creating & Configuring Scratch Orgs.
- Experience in Creating HTML and Visualforce Email Templates to Send Dynamic Email Notifications.
- Experience in Building Asynchronous Processes like Batch Apex, Schedule Apex, Future Methods, Queueable Apex, Asynchronous Triggers & Continuation Callouts.
- Experience in Integrating Salesforce with External Systems using SOAP, REST Based Web Services, SOAP, and HTTP-based Callouts.
- Experience in Configuring Outbound and Inbound Integration Security.
- Experience in Synchronizing Salesforce Data with External Systems and External system data with Salesforce.
- Experience in Authenticating Using Connected Applications and authenticating external services with Named Credentials.
- Experience in Testing Callouts using Mock Service Calls.

- Experience in Using Lightning Connect to connect and access data from external sources.
- Experience in deploying the Components through the Change Sets & ANT Tool.
- Experience utilizing Version Control Tools like Git, Github, Continuous Integration tools (e.g. Deployment Toolkit with ANT, Bamboo), and multi-sandbox environments.
- Experience with full life cycle implementation of business solutions, including requirement gathering, prototype designing, coding, database/data mart setup, report development, testing, UAT deployment, production, and ongoing product support.
- Great interpersonal and communication skills, focused, self-motivated, quick learner, and team-oriented.
- Continually provided value-added services to clients through thoughtful experience and excellent communication skills.

Work Experience:

- Working as a Senior Software Developer in Wipro from Feb-2021 to till
- Working as a Senior Software Analyst in Verizon India from Oct-2019 to Sep-2020.
- Worked as a Software Engineer in Infosys from June 2015 to Oct 2019.

Certifications:

1) Salesforce Certified Administrator.

2) Salesforce Certified Platform Developer I

Role: Salesforce Developer

Client: Credit Suisse

Description: At Credit Suisse, we are working in salesforce GM which is global markets. Previously it was built in some other build CRM called CMT now we are migrating CMT to salesforce and adding new features. This project is based on interactions(activities) on the basis of the user profile we have pages for every profile in which we are showing activities related to account and contact and all the dashboards showing monthly quarterly and yearly interactions data was built in Einstein analytics.

Responsibilities:

- Developed Lightning apps using Lightning Components and made them compatible with salesforce1 mobile app
- Enabled Aura Framework, by adding Aura Attributes and Aura Handlers for Events to focus on Logic and Interactions in Lightning Applications
- Experienced in setting up Environment by enabling My Domain, Decompose the App in Components and build the Lightning App.
- Formatting and migrating user data into LE, Implemented Salesforce Lightning Components for small set of users within the organization.
- Built customized Lightning components replacing the existing ones; using JavaScript on the client side and Apex on the server side.
- Experience in building new Applications with the Lightning App Builder and Lightning components
- Used Salesforce Lightning Inspector to debug the lightning components during development.

Role: Salesforce Developer**Client: Atrenta India Pvt. Ltd**

Description: Atrenta is one of the leading suppliers of innovative products addressing early stage Integrated Circuits and system design aimed at improving design efficiency for the world's leading semiconductor and consumer electronics companies.

Responsibilities:

- Created Lightning Components, and added CSS and Design Parameters which improves performance
- Developed Lightning apps using Lightning Components and made them compatible with the salesforce1 mobile app
- Enabled Aura Framework, by adding Aura Attributes and Aura Handlers for Events to focus on Logic and Interactions in Lightning Applications
- Experienced in setting up Environment by enabling My Domain, Decomposing the App in Components, and building the Lightning App.

- Formatting and migrating user data into LE, Implemented Salesforce Lightning Components for small set of users within the organization.
- Built customized Lightning components replacing the existing ones; using JavaScript on the client side and Apex on the server side.
- Experience in building new Applications with the Lightning App Builder and Lightning components
- Used Salesforce Lightning Inspector to debug the lightning components during the development process.
- Created Apex methods for the lightning controller and helper methods to perform DML operations on the case records.
- Worked on JIRA tool.
- Created Apex methods for the lightning controller and helper methods to perform DML operations on the case records.
- Created Salesforce sObjects and related metadata necessary to support customizations across instances.
- Developing complex customized solutions and simplifying the sales and service productive solutions including Territory management, product management, CPQ redesign, quotes and renewals management, channel management and SLA management and service cloud solutions.
- Manage SFDC releases, plan sandbox previews and CI/CD ANT release process
- Created modern Enterprise Lightning Apps combining Lightning Design System, Lightning App Builder and Lightning Component features.
- Upgraded some Apps from Salesforce Classic to Lightning Experience to develop rich user interface and better interaction of pages.
- Retrieved some data and its functionality from Third-Party API's and displayed within the lightning component.
- Created multiple Lightning Components, added CSS and Design Parameters that makes the Lightning component look and feel better.
- Created page layouts to organize fields, custom links, related lists, stored procedures and other components on detail pages and designed Workflows, Validation rules, Approval Processes and Auto-Response Rules for automating business logic.
- Uploaded records using the Data Loader to cleanse and De-duplicating bulk loads, as well as and worked with Salesforce data tools such as Data Loader, Excel Connector, Demand Tools.

- Implemented designed and developed Standard and Custom Apex Classes, Controllers Classes, extensions and Apex Triggers to handle business logic and used debug logs to trace the execution and used Apex Data Loader to migrate data such as accounts, campaigns
- Created Force.com Sites for external users and configured public access to accommodate data access in visual force pages, and implemented Salesforce Chatter functionality for one to many business users
- Created Visual Force pages and components to rend data from associated controllers and embedded Java Script and DHTML as needed.
- Development of SOAP and REST based web services used for custom development and used WSDL to expose logic to clients.
- Interacted with various business team members to gather the requirements and documented the requirements in a test-driven and formal QA Development environment that included development, staging, and production deployment cycles
- Maintenance of installed Managed Packages in Lightning using Apex. Experienced in using Data Migration tool called Data Loader.
- Visualforce Pages for Lightning Experience, Alternates for Java Script Codes, Sharing Visualforce pages between Classic and Lightning.
- Worked on Lightning Process builder flows, Connect API, Chatter and quick Action.
- Used field level security along with page layouts in Lightning to manage access to certain fields.
- Involved in daily standup meetings, Scrum. This resulted to bring good solution to the business requirement.

Role: Salesforce Developer

Client: TE Connectivity

Description: TE Connectivity is a \$12 billion global technology leader. The connectivity and sensor solutions are essential in today's increasingly connected world. They design and manufactures connectivity and sensor solutions for a variety of industries including automotive, industrial equipment, data communication systems, aerospace, defense, oil and gas and many other subsea communications.

Responsibilities:

- Created modern Enterprise Lightning Apps combining Lightning Design System, Lightning App Builder and Lightning Component features.
- Upgraded some Apps from Salesforce Classic to Lightning Experience to develop rich user interface

and better interaction of pages.

- Retrieved some data and its functionality from Third-Party API's and displayed within the lightning component.
- Created multiple Lightning Components, added CSS and Design Parameters that makes the Lightning component look and feel better.
- Leveraged APEX Controller to make a call for external requests to retrieve data from various API's and displayed them on to the component.
- Enabled Aura Framework, by adding Aura Attributes and Aura Handlers for Events to focus on Logic and Interactions in Lightning Applications.
- Minimized code in JavaScript Controllers by adding reusable functions in Helper Component.
- Updated the APEX Controller and Helper functions regularly making the Component Context Aware as per business requirement.
- Created modern Enterprise Lightning Apps combining Lightning Design System, Lightning App Builder and Lightning Component features.
- Tested apps by appending multiple components to a Lightning Application thereby deployed Applications from Sandbox to Production.
- Used refined global search in Lightning by developing Apex classes and Controllers.
- Experienced using Force.com IDE for creating, modifying, testing, and deploying Force.com Applications.
- Used SOQL and SOSL statements within Governor Limits for data manipulation needs of the application using platform database objects.
- Maintenance of installed Managed Packages in Lightning using Apex. Experienced in using Data Migration tool called Data Loader.
- Visualforce Pages for Lightning Experience, Alternates for Java Script Codes, Sharing Visualforce pages between Classic and Lightning.
- Worked on Lightning Process builder flows, Connect API, Chatter and quick Action.
- Built Lightning Component Tab for Salesforce 1 Navigation and Custom Applications in Lightning Experience.
- Used field level security along with page layouts in Lightning to manage access to certain fields.
- Implemented the Web Services through WSDL in the Salesforce.com for outbound messaging.

- Worked on Integrating SAP and Salesforce systems using SOAP and REST API's.
- Involved in daily standup meetings, Scrum. This resulted to bring good solution to the business requirement.

Role: Salesforce Developer

Client: Cummins

Description: Cummins Inc., a global power leader that designs, manufactures, distributes and services diesel & natural gas engines & engine-related component products, including filtration, after treatment, turbochargers, fuel systems, controls systems, air handling systems and electric power generation systems. Cummins Inc. selected Salesforce Cloud base CRM solution for their Sales team operating across the region to manage their Sales Process. Cummins Inc. expecting solution should support their Sales process and it should be flexible enough to manage the different Sales process from across Business verticals.

Responsibilities:

- Developed Apex Classes for Visual force pages. Developed required Triggers for application.
- Have written Batch Apex for the asynchronous data updates. Created E-mail Templates for the email alerts created. Used analytic snapshots for bi-weekly reports.
- Used Eclipse, Force.com, Developer console IDE's for development of Apex classes, Visualforce pages, Triggers and changing meta-data.
- Setup Email Services on Force.com platform to handle inbound emails.
- Implement Roll-up Summary fields to aggregate data from child records on the parent.
- Developed many Report Types and created various Reports (summary reports) using the Report Builder according to the need of the organization.
- Created many Lightning Components and server-side controllers to meet the business requirements.
- Developed rich UI using HTML5 and CSS3 in Visualforce pages and used JavaScript and JQuery to utilize the plug-ins.
- Experienced in migrating the standard and custom objects in standard experience to lightning experience.

- Handled ongoing customization/ alteration of Salesforce.com. to increase benefits and usability.
- Created custom fields, pick lists, dependent pick lists, and validation formulas to the custom objects.
- Used Single sign-on, SAML settings to enable the user to login to various applications.
- Written Apex Test classes to meet Unit testing before migrating from Sandbox to Production environment.
- Use SOQL & SOSL considering the Governor Limits for data manipulation using the apex code.
- Design, create and maintain user roles, profiles and hierarchies. Monitor application storage usage and archive data as needed.
- Created case escalation rules to escalate cases automatically if they are not resolved within a certain period of time, also worked on app-exchange tools for tracking orders.
- Developed Apex Triggers , Apex Classes and Test methods, Controllers & Extensions to support Visualforce pages , Test Classes for Unit testing as per the functional needs in application.
- Customized standard Sales force objects like Accounts, Contacts, Case management and Solutions. Developed and created customized reports and dashboards.
- Developed Test classes for all the Apex classes and Triggers with minimum 92% code coverage for triggers and classes.
- Implemented Salesforce.com web services client using sales force web services API, Java, XML and partner WSDL.
- Exported data from legacy system and imported into SFDC through Apex data loader for data Migration .
- Worked with admin team and management team to create users, roles, public groups and implemented role hierarchies, sharing rules and record level permissions to provide shared access among different users also involved in working with Admin in the business office to upgrade handoffs in production.
- Followed Scrum Agile methodology for the iterative development of the application and participated in weekly Sprints, daily stand up meetings and customer reporting backlogs.
- Used Source tree to move the code from one environment to other environment and Target Process to maintain sprint stories and defects.

Role: Salesforce Developer**Client: Route One**

Description: Route One is a leading automotive financial services company powered by a top direct banking franchise. Route One automotive services business offers a full spectrum of financial products and services, including new and used vehicle inventory and consumer financing, leasing, vehicle service contracts, commercial loans and vehicle remarketing services, as well as a variety of insurance offerings, including inventory insurance, insurance consultative services for dealers and other ancillary products.
