

JOSEPHENE SAMANTHA KANDI

Senior Data Engineer

+91-9550879082 • samanthajosephene95@gmail.com • linkedin.com/in/josephene-samantha-2211ab118 • Hyderabad, IN

Summary

- Experienced Data Engineer with over 6 years of expertise in designing, developing, and maintaining robust data pipelines.
- Proficient in DataStage ETL tool) and Unix scripting. Experience in DB2, Teradata and Snowflake Databases.
- Worked in Data Modernization using the ecosystem of Matillion, Spark Scala fundamentals and Azure Databricks.
- Has knowledge of Apache Airflow, Autosys, Ansible and GitHub.
- Worked in Waterfall model and currently working in Agile Methodology fulfilling customer satisfaction by early and continuous delivery. Experience in importing and exporting data using Sqoop from HDFS to RDBMS and vice- versa.
- Experienced in optimizing performance in relational and dimensional database environments by making proper use of Indexes and Partitioning techniques

Skills

Cloud: Azure DataBricks, Azure Blob Storage, Azure Synapse Analytics, Azure Data Factory, Azure Data Lake

Database Tools: Teradata, SQL Assistant, MySQL, Snowflake Database

Big Data: Apache Spark Hadoop, Sqoop, Hive

ETL Technologies: DataStage, Matillion (ETL Cloud Tool)

Defect Tracking Tool: ServiceNow

Agile Methodologies: JIRA, Rally

Job Scheduling Tools: Airflow, Autosys

Version Control: Git (GitHub)

CLI: UNIX

Experience

Optum

Senior Data Engineer

Hyderabad, IN

08/2022 - Present

Optum, Inc. is an American healthcare services provider with business interests encompassing technology and related services, pharmacy care services and various direct healthcare services.

PROJECTS:

Advancing Data Processing

Innovations in ETL Pipelines, Azure Integration, and Spark Framework

- Optimization Designed and established robust data pipelines to seamlessly gather, store and process data from diverse origins.
- Pioneered the development of ETL pipelines within Matillion, focusing on guaranteeing the efficiency and dependability of data transfer and transformation procedures.
- Enhanced the logic of pre-existing ETL processes within DataStage while adhering to best practices for data processing, paralleling the process of redeveloping ETL jobs in the Matillion environment.
- Orchestrated the extraction of files from Azure Blob Storage, further directing their integration into Data Lake tables via Azure Databricks.
- Employed Scala programming in conjunction with Data Frames and the Spark SQL API for accelerated data testing and processing.
- Developed Spark scripts tailored to exact specifications, leveraging SQL queries derived from Matillion jobs' generated outputs.
- Systematically enhancing the Spark SQL queries extracted from Matillion, a crucial preparatory measure before incorporating them into the Spark framework.
- Worked on the comparison of the processing time and output data between Data Stage and Spark Framework.

Experience

Data Migration and Quality Assurance

Teradata to Snowflake with DataStage, Unix Scripting, and Excel Macros

- Analysis and Coding for Migrating the Data from On Premise to Cloud that is from Teradata to Snowflake.
- Designed the whole data load in DataStage as well as in Shell Scripting in Unix to perform the same using SnowSQL A CLI to Snowflake).
- Tested the whole code designed to load data in Snowflake in all the DEV, SIT and UAT environments and involved in deployment of the code to Production.
- Created Automated Business Checkout's Workbooks for Data Quality checks which involves writing Excel Macro's in VBA language to connect to Snowflake DB through ODBC drivers and Extract data for DQ checks on a click of a button in Excel and compare.
- Worked on Understanding and Analyzing domain and creating Data Flow Diagrams on Draw.io tool to represent the whole Project process in an understandable way.
Involved in DataStage version Upgrade New Grid) from 11.3 11.7.
- Did some minor code level fixes to resolve few data issues due to some functions not performing as expected in the new version

Tata Consultancy Services

IT Analyst (Datastage Developer)

Hyderabad, IN

01/2018 - 08/2022

Team: GWIM Data Provisioning point (GDPP)

GWIM Data Provisioning point (GDPP) is the strategic batch data interface between GWIM and the Enterprise. GDPP centralizes feed control and SLA guidelines as defined by data consumers. It acts as central point for GWIM data controls.

Responsibilities:

- Involved in the initial analysis for the requirements given.
- Writing several queries using toad for Oracle & DB2 to test the ETL processes.
- Designing Parallel jobs using DataStage designer as per the mapping documents given by source teams using appropriate stages, developing Sequence jobs to execute the set of parallel jobs with restart ability and take proper failure actions.
- Push/Pull data from various sources (can be Oracle, DB2, Files etc.) as an incoming file storage area, using ETL tool for various purposes like Load/Extract (using Database as Oracle, DB2), pass thru processes and sending to target systems and loading into Teradata, Hadoop.
- Using DataStage director to schedule run the solution, testing and debugging its components and monitoring the results.
- Using Autosys scheduler tool for automating the job cycles for daily, weekly, monthly jobs along with proper dependencies.
- Developing UNIX scripts as per the requirement to run the DataStage jobs for various validations.
- Performing validations (data, file, field, count. etc.) at UAT and PROD.
- Importing and exporting data from Oracle to Hive by using Sqoop.
- Creating Tables, HQL, LMD entries, DDL's, views, option files, Hadoop JILS for Data Lake process.
- Created Hive External tables and loaded the data into tables and query data using HQL.
- Worked with team in getting optimized solutions and to help team in delivering high quality product

Tata Consultancy Services

IT Analyst (Mainframe Developer)

Hyderabad, India

01/2017 - 01/2018

Team: MIDAS

MIDAS is the source of the core financial metrics reported to Bank executive management. The requirements are to collect the data from internal and external sources and continually update the Data warehouse in response to changes business.

Responsibilities

- Involved in Coding, Unit Testing as per the technical specification.
- Changed in existing model based on Business requirement in mainframe (JCL, COBOL).
- Worked in close coordination with onsite team for requirement analysis and deliver final output in specified manner.

Education

MVGR College Of Engineering

B. Tech Mechanical Engineering

Vizianagaram, AP

2012 - 2016

Achievements

- Recognized at Optum for Seamless delivery of the data load process to snowflake (Cloud Database) in parallel with Teradata
- Recognized at Optum for the great work put in to quickly adapt to Matillion and Apache Spark technologies for DataStage to Spark migration Project
