SUMMARY

With over 6 years of experience as a data engineer, I have developed Data Engineering solutions from scratch including building data pipelines, data transformation and data visualization on multiple efforts. My deep technology expertise has enabled to craft innovative technology solutions that now enable business to visualize their dashboards in near real-time.

HIGHLIGHTS

Having 6 years of experience as a Data engineer on Azure Data Factory, Azure Synapses Analytics, Azure Databricks, PySpark, Python & SQL Server DBA and knowledge on creating Datawarehouse.

- Hands on expedience on installing the selfhosted Integration runtime to migrate data from on premise to cloud
- Hands on experience on sharing the Integration runtime between the ADFs.
- Hands on experience on creating the dynamic pipelines.
- Experienced in working Microsoft Azure Databricks Distributions. Azure Data Bricks notebooks in PySpark and SQL to compute huge volumes of data in Azure
- Hands on experience on Azure Data Factory V2
- Hands on experience development of test framework using python
- Hands on experience on Creating ADF Pipeline for Full Load and Incremental Load
- Hands on experience on Creating the linked services for the different services
- Hands on experience on creating the Logic apps for sending mail notifications.
- Having good working experience of Storages like Azure Data Lake Storage and Blob Storage.
- Familiar with Data Ingestion pipeline design and advanced data processing tools.
- Hands on experience in writing and implementation of the Stored Procedures, Views, Indexes, Joins, Sub -Queries, and Merge Statement, Table variable, Temp Tables, DDL, DML Commands using SQL & T-SQL.
- Strong knowledge of data warehousing methodologies and including Star schema, snowflake and Data modelling concepts
- Having knowledge in dimensional data modelling, cube development and manipulations in SQL
- Good knowledge on writes back feature to update SQL tables in the database.
- Hands on experience on deployment pipelines to deploy reports to UAT and Prod environments
- Good knowledge on dataflows, power automate and power apps.
- Experience in developing, monitoring, extracting and transforming data using SSIS, Import Export Wizard, and Bulk Insert.
- Maintaining Log and Audit information in SQL tables, experienced in providing custom logging,
- Error Handling by using event handler for SSIS packages
- Good understanding in creating Databases, Tables, Stored Procedures, Triggers, Views, User defined functions and Indexes using T-SQL.
- Developed T-SQL scripts for performing automation tasks, performed and finetuned stored procedures and SQL Queries and user defined functions.

TECHNICAL SKILLS

- **Data Ingestion Tools** : Azure Data Factory, Azure Databricks, Azure Synapse
- **Relational Databases** : SQL, Server, Datawarehouse,
- **Cloud Computing** : Microsoft Azure Platform, Azure Devops
- **Others** : Pyspark, Python

PROFESSIONAL EXPERIENCE

Designation – Azure Data Engineer

INFOGAIN INDIA PRIVATE LIMITED

APRIL - 2022 to Present

CYBERMATIC SYSTEMS PRIVATE LIMITED

MAY - 2017 to APRIL -2022

PROJECT DETAILS

PROJECT#1

- **Project Name** CR Analytics

Roles and responsibilities:

- Good experience in creating Azure Data Factory pipelines and writing Azure Data
- Azure Data Bricks notebooks in PySpark and SQL to compute huge volumes of data in Azure
- Data Lake Store Created Notebooks in Azure Data bricks to transform the data based on the given requirement and ingest the data into Azure SQL Database.
- Ensuring the credentials required to connect to the data sources are secured using Azure Key Vault.
- Have good working experience in processing binary files using Azure blob storage in Azure data bricks.
- Gathered the requirements from the client and analyzed the data to build power bi reports.
- Writing the ETL scripts using python
- Developed table, matrix and score cards to represents datacenter deployments over the time.
- Used multiple slicers and filters in power bi reports as per the requirements.
- Developed different reports to show the active, in progress, hold, cancelled tickets at deployment and ticket level to track the status of the deployment.
- Enhanced the existing power bi reports functionality as per the customer requirements.
- Modified some of the existing SQL queries to optimize the processing time.
- Loaded data from source to bcp file and then target DB through command line script.
- Assisted customers with creating reports, issues with publishing reports, transforming the data, and the use of multiple visualizations.

PROJECT#2

- **Project Name** Abbott Laboratories

Abbott India Limited is a publicly listed company and a subsidiary of Abbott Laboratories, headquartered in Mumbai. One of India's fastest-growing pharmaceutical companies, Abbott India Limited is part of Abbott's global pharmaceutical business in India and takes pride in offering high-quality trusted medicines in multiple therapeutic categories such as women's health, gastroenterology, cardiology, metabolic disorders and primary care

Roles and responsibilities:

- Maintaining and managing servers SQL Server 2008R2/2012/ 2014/2017
- Installing, configuring, managing, monitoring and troubleshooting SQL Server
- Refreshing UAT environment with Production data monthly.
- Enrolling users, controlling and monitoring User Access to the database, and maintaining system security.
- Executing scripts in prod environment.
- Configured Mirroring, Replication, Log-shipping and Clustering setup between database servers/instances.
- Monitoring Clusters and troubleshooting Clustering Issues, performing failovers.
- Troubleshooting performance issues and tuning the database for better performance.
- Running SQL Server profiler to troubleshoot the data issues reported by users.
- Monitoring issues related to database locks/blockings/deadlocks.
- Configuring SQL Server Reporting Server, Database Mails to send notification for alerts.
- Migrating servers from SQL 2008/ 2008 R2 to 2012 / 2014.
- Performing the Patching activities.
- Able to perform the Failover and Failback activities in Cluster environment.
- Daily checking and resolving the tickets depends on the priority levels.
- Configuring the Transaction replication in production environment.
- Daily checking the issues like backup failures, failed logins and resolve the issues.
- Creating and managing the Always on.

PROJECT#3

- **Project Name** Orange Business services North America, USA

Description:

- worked on different activities in pipelines and linked services in Azure Data Factory as per the requirement for data orchestration purpose.
- Involved in migrating data in incremental manner.
- Involved in creating views and stored procedures.
- Involved in creating notebooks for theme and sub theme machine learning projects.

As a global IT and communications services provider. Orange Business Services helps companies collaborate more effectively, operate more efficiently and engage better with their customers connecting their people sites and machines securely and reliably.

Through a unique combination of robust network and IT infrastructure, managed services and professional, reliable people. We do everything we can to offer an outstanding customer experience helping to change business life for the better some facts and figures. we have nearly 28,500 staff in 100 countries and territories, including 88 Russian regional subdivisions and 200 Chinese cities.

Roles and responsibilities:

- Understanding and analyzing data as part of Extraction.
- Created source to target mappings and ETL design for integration of new/modified data into the data warehouse.
- Understand report specification document and designing the reports based on report specification document which meets the client requirements.
- Created stored procedures and Views for reports.
- Designed reports like Table, Matrix, drill down, drill through, Linked reports, Parameterized reports and sub reports using SSRS.
- Designed ad-hoc reports using Report Builder.

PROJECT#4

- **Project Name : Patterson Fuse Data Conversion**

Description:

Patterson Dental, a business unit of Patterson companies. Fuse application.

Fuse is a browser-based practice management application that leverages the cloud for dental office operations. Designed for both single- and multi-location dental offices, the Fuse platform provides administrative, operational and business functionality for a dental practice.

Roles and responsibilities:

- To document the business process by identifying the requirements.
- Understanding Source and target database design and relationship between the tables based on the requirements.
- Created source to target mappings and ETL design for integration of new/modified data into the data warehouse.
- Created complex queries involving multi-table joins, correlated sub queries, CTE's as per business requirements.
- Development of Stored Procedures, Functions and Queries as per business requirements.

PROJECT#5

- **Project Name : Warranty Management System**

Description:

Providence Health & Services is a not-for-profit, Catholic health care system operating multiple hospitals across seven states delivering world-class health with human connection.

Roles and responsibilities:

- worked on different activities in pipelines and linked services in Azure Data Factory as per the requirement for data orchestration purpose.
- Involved in migrating data in incremental manner.
- Involved in creating views and stored procedures.
