Team Leadership

Docker, Kubernetes

Jenkins(CI/CD)

Dedicated Technical Architect with a passion for building scalable software architecture for distributed systems. Seeking a challenging role in a product-based organization to leverage entrepreneurial skills and deep technical expertise, contributing to the organization's global success.

Experience

Technical Architect

Noice / 05/2022 - 07/2023

Live, Growth, Creator, On-demand/midas

- Led and guided four teams at Noice, influencing key design decisions for scalable backend systems.
- Designed end-to-end solution for enabling virtual gifting monetization, integrating third-party libraries and APIs.
- Enhanced notification service to handle scaling from thousands to millions of notifications using Kafka and Kubernetes.
- Optimized SQL queries to achieve sub-2-second response times, implemented performance improvements.
- Implemented alerts and monitoring for queries and APIs in load-bearing software to prevent downtimes.

Sr. Software Engineer

Nium(formerly Instarem) / 04/2019 - 05/2022

- Architected and designed account verification service, preventing errors in payments through beneficiary validation.
- Developed address book for prevalidated beneficiaries, across various Nium products.
- Created Go script for migrating beneficiary data from PostgreSQL to MongoDB.
- Managed deployments, release cycles, API documentation, code reviews, and tech grooming in microservices architecture.

Software Engineer

JetSynthesys/Thunderlabs/Coolboots / 04/2016 - 03/2019

- Contributed to building a medical B2B ecommerce web application, leading a team of 4 to connect manufacturers and healthcare providers.
- Developed backend for interpreting SMS data into organized inboxes, categories included banks, promotions, offers, etc.
- Designed a system to refund a percentage of call/sms expenses to users' virtual wallet for recharges and promotions.

Software Engineer

Canvass / 07/2015 - 03/2016

- Maintained Women's healthcare WordPress app and Shopify apps with regular updates.
- Conducted end-to-end API testing and worked on bug fixes for Marketing Workflow Java Spring Boot Application

Co-founder, Director

SlycedIn / 05/2014 - 07/2015

- Developed Meteor.Js and Python applications for event coverage, ticketing, networking, and agenda details.
- Successfully pitched the product to stakeholders, partnered with HostingCon for beta launch.
- Mentored and trained a team of 2 interns for development.
