Objective

aspiring DevOps engineer with 1 year of experience looking to use automation and continuous integration to accelerate software development and deployment

Experience

- Taxian Technologies PVT LTD** **Mar 2024 – present**
Designation: Devops Engineer
I manage part-time DevOps responsibilities, specializing in AWS, Jenkins, Docker, Ansible, and Git tools for continuous integration and deployment. I work with cloud services, automate tasks, and ensure smooth software delivery. Proficient in Linux, I optimize systems for efficient operations and collaborate effectively with teams
- Root integrated technologies pvt ltd.** **Apr 2023 – Nov 2023**
Designation: Junior Devops Engineer
As a Junior DevOps engineer, I've focused on AWS, Jenkins, Strapi, and Plesk server. My main work involved CI/CD pipelines and AWS cloud management, while also contributing as a Backend engineer with Strapi. I'm proficient in AWS Cloud, Jenkins, Linux, Strapi, Git, GitHub, Render, and Plesk.

Educational Qualification

- Bachelor of Technology (B. Tech)** **2018 – 2022**
Mechanical Engineering Uttarakhand Technical University ,
Dehradun CGPA: 7.2

Projects

- End to End CI/CD implementation- Jenkins**
Implemented end-to-end CI/CD pipelines for MERN stack applications leveraging Jenkins declarative pipelines. Utilized Jenkins, SonarQube, Trivy, Docker, OWASP, Docker Compose, AWS EC2 instances, Kubernetes, Git, and GitHub. Automated deployment and ensured code quality, security, and scalability for MongoDB, Express, React.js, and Next.js based projects.
- Three Tier Architecture- AWS**
Implemented a three-tier architecture designed for high availability and scalability utilizing Terraform. Successfully deployed the application on EC2 instances leveraging user data scripts. Utilized various AWS components including VPC, ASG, Route53, CDN, ELB, EC2, S3, NAT, and API Gateway to facilitate seamless operation and efficient delivery.
- Configuration Management — Ansible**
Managed Configuration of multiple Linux and windows instances using Ansible
- Cloud Cost Optimization —AWS**
Utilized AWS CloudWatch and Lambda functions to reduce cloud costs by 25%.
Implementation:
Developed a Lambda function in Python, leveraging the boto3 module for interaction with AWS service APIs. This Lambda function was triggered by CloudWatch events. Its primary function was to monitor unused EBS snapshots, executing actions such as deletion or sending notifications to snapshot owners.

Skills

AWS | Linux | Jenkins | Git & Github | Docker | Ansible | Kubernetes | Bash & Python
| Terraform | Grafana | Loki & promtail | prometheus | Jira | Devsecops
