Career Objective

To utilize my expertise in software testing within a progressive organization, contributing to innovative solutions and team success while fostering personal and professional growth.

Work Experience

- Having 5 years of experience in Software Testing, specializing in both manual and automation testing.
- Proficient in **mobile application and web application** testing and adept with tools like **Appium and Selenium using Java**.
- Proficient in mobile application testing and adept with tools like **TypeScript**, JavaScript and **Mocha framework**
- Expertise in identifying mobile elements with **Appium Inspector** and dynamic XPath creation
- Strong knowledge of ADB commands and compatibility testing using BrowserStack and LambdaTest
- Automated test cases and implemented frameworks like **Mocha, BDD, Hybrid Automation Framework** with Selenium/TypeScript/Appium, incorporating Page Object Model design pattern
- Hands-on experience in mocking API cases to simulate real-time scenarios
- Proficient in **OOP concepts**: class, object, inheritance, abstraction, polymorphism, encapsulation, arrays, and strings.
- Strong understanding of **SDLC, STLC**, and test case design techniques
- Extensive experience in Integration, End-to-End, Smoke, and Regression testing in a Agile environment
- Automated API testing using **REST Assured** and performed manual API testing with Postman
- Experience in **Maven, Jenkins** for test execution

Experience

- Working as an **SDET Engineer** at **Zupee (Cashgrail Private Limited)**, Gurugram under the payroll of Test Yantra Software Solutions, since June 2024.
- Worked as Software Test engineer in **Techbeez Software Technologies** Pvt Ltd, Bangalore from january 2020 to June 2024

Skills

- Languages: Java, TypeScript
- Automation tools: Selenium, Appium, TypeScript
- Project management tool: Jira, Testrail, Zenith
- API Testing: Postman, REST Assured
- Frameworks: TestNG , BDD, Mocha
- Dependency tool: Maven
- Repository tool: GitHub, AWS, BitBucket
- CI/CD: Jenkins

Project Details

Project #03:- Zupee (super app)

Application : Mobile

Domain : Online Gaming

Duration : 7 months

Project Description:

Zupee is an **online gaming platform** available as a mobile application. It offers a wide range of engaging games and competitions where users can participate, earn rewards, and enjoy a seamless gaming experience. The platform provides features such as user-friendly navigation, real-time updates, secure payment modes, and detailed tracking of rewards and progress. Zupee ensures a secure and interactive gaming environment while catering to millions of users.

Responsibilities:

- Analyzed manual testcase and created test script for mobile and mobile web applications.
- Automated test scripts using **Appium, Selenium, Mocha, TestNG, REST Assured and BDD** frameworks
- Identified mobile elements with Appium Inspector, created dynamic XPaths, and performed compatibility testing using BrowserStack and LambdaTest.
- Proficient in Maven, Jenkins, AWS and GitHub for test execution and version control
- Conducted Integration, End-to-End, Smoke, and **Regression testing** in Agile environments.
- Debugged test failures using Jenkins reports and ensured successful execution of test cases.
- Used BitBucket to push, pull & commit code into repository
- Involved in keeping track of all written test cases for automation by functional testing team & modifying testcases according to the test requirement

Project #02:- Evaly

• Application : Web and Mobile

• Domain. : E-Commerce

• Duration. : 30 Months

Project Description:

Evaly is an online shopping platform available as a mobile (Android) and web application, offering product searches, order placement via multiple payment modes, order tracking, and updates.

Responsibilities:

- Analyzed requirements and created detailed test scenarios.
- Automated test scripts using Appium for mobile testing and Selenium for web testing, with strong experience in both BDD and Hybrid frameworks.
- Identified elements with Appium Inspector and performed testing on both physical devices and emulators.
- Utilized GitHub for version control and Maven for build management.
- Developed and maintained functional test scripts in Selenium WebDriver using Java and TestNG.
- Executed regression and smoke tests using Maven profiling and debugged test failures using Jenkins execution reports.
- Actively participated in Agile ceremonies, ensuring test activities aligned with sprint goals

Project #01:-Click Health

Application : Web Application

Domain : Health Care

Duration. : 18 months

Project Description:

It belongs to Health Care domain. It is a Web application using which we can share patient information easily across multiple platforms. It simplify and increase the patient booking, gives the centralized information for better management, storage and access.

Responsibilities:

- Analyzed requirements and created detailed test scenarios.
- Performed manual testing for both mobile and web applications to ensure functionality and usability.
- Identified and reported issues, tracking defects using Jira.
- Worked closely with development teams to clarify requirements and resolve issues.
- Actively participated in Agile ceremonies, collaborating with cross-functional teams to ensure timely delivery of features.
- Ensured comprehensive test coverage through functional, smoke, and regression testing.
- Contributed to test case design and reviewed test cases for accuracy and coverage.

Education

Completed Bachelor of Engineering from Dr Ambedkar Institute Of Technology- Bengaluru, Karnataka.

Declaration

All the information provided above is true to the best of my knowledge and I am aware of the fact that any discrepancy in this will lead me to undesired consequences.
