

Yogesh Kumar Reddy Yanamala

Bangalore

9908431700 | yogeshreddy663@gmail.com

Objective

Support Engineer with 4+ years of experience in AWS, Linux, Networking and DevOps tools, specializing in automation, monitoring, and infrastructure management. Looking to leverage my skills in a dynamic environment focused on system uptime, security, and scalability.

Skills

- ☁ Cloud Technologies: Amazon Web Services (EC2, S3, IAM, Route 53, VPC, CloudFront, ELB, CloudWatch, Lambda)
- 💻 Operating Systems : Linux, Windows
- 🔍 Monitoring & Incident Management: CloudWatch, Dynatrace, ServiceNow (ITSM), Root Cause Analysis (RCA), UAT
- 🗄 Databases & Scripting: SQL, Shell Scripting (Bash), Python
- 🔧 APIs & Testing Tools: Postman, REST APIs
- 🌐 Networking: TCP/IP, UDP, Firewall, Subnetting, Routing, VPN, DNS,NAT, NACL,CDN
- 🔗 DevOps & Automation Tools: Git, Jenkins, Docker, Kubernetes, Terraform, Ansible, PuTTY, WinSCP
- 🔒 Access & Security: IAM (AWS), Active Directory, SAML
- 💼 SaaS & CRM Platforms: Salesforce

Experience

- Santric Technologies** Oct 2023 - Present
IT Analyst
 - Provided support for enterprise applications on Linux servers, ensuring minimal downtime and fast issue resolution.
 - Managed Linux file permissions using chmod and chown to enforce secure access controls across production environments.
 - Monitored system performance (CPU, memory, disk) to maintain optimal uptime and prevent resource bottlenecks.
 - Reduced disk usage and improved system health by cleaning up large files, logs, and temporary data.
 - Administered core AWS services including EC2, S3, and IAM to support scalable compute and storage operations.
 - Configured and managed VPC networking components (subnets, route tables, IGWs, NACLs, Security Groups) to ensure secure and segmented cloud architecture.
 - Leveraged CloudFront and Route 53 for fast content delivery and resilient DNS routing across multiple regions.
 - Implemented CI/CD pipelines using Jenkins integrated with Git, enabling automated builds, testing, and deployments.
 - Deployed and managed scalable containerized applications using Docker and Kubernetes, optimizing resource utilization and high availability.
 - Automated server provisioning, patching, and configuration management using Ansible and Terraform following Infrastructure as Code (IaC) best practices.
 - Configured RAID 0 and RAID 1 to enhance disk performance and ensure data redundancy for critical systems.
 - Conducted regular health checks and participated in Root Cause Analysis (RCA), contributing to a 30% reduction in server downtime.
 - Monitored infrastructure using AWS CloudWatch setting up alerts and dashboards for real-time performance and uptime tracking.
 - Automated routine admin tasks using Shell scripting, including backups, log rotation, and service health check
 - Utilized SQL for backend data validation and WinSCP for secure file transfers across environments.
 - Supported VMware-based virtual infrastructure for development and testing operations.

- **Enhance sys innovations**

June 2023 - Sep 2023

Analyst

- Monitored critical applications 24x7 using Dynatrace with automated alerting to ensure system uptime and proactive incident detection.
- Managed user and group access through Active Directory, reducing onboarding time by 30% and improving account provisioning efficiency.
- Controlled IAM roles and access policies within AWS to maintain secure and compliant access to cloud resources.
- Enhanced incident response by performing performance analysis and log reviews on Linux servers.
- Documented Standard Operating Procedures (SOPs) and internal Knowledge Base articles, increasing L1/L2 resolution efficiency by 25%.
- Participated in change review meetings, UAT validation, and post-deployment testing to ensure production readiness.
- Performed regular disk cleanup and maintenance activities to avoid server storage issues and support optimal performance.
- Handled secure file transfers and system operations using WinSCP and Linux command-line utilities.

- **Infosys**

Jan 2021 - Jun 2023

Senior systems engineer

- Communicated with clients to gather technical requirements, resolve issues, and provide regular status updates across the project lifecycle.
- Resolved incident tickets using ServiceNow, maintaining SLA compliance and addressing P1/P2 issues efficiently.
- Performed daily health checks on disk usage, services, and scheduled jobs to ensure infrastructure stability.
- Delivered application releases and production patching using Linux terminals (PuTTY).
- Participated in bridge calls for critical incidents, collaborating with cross-functional teams for quick resolution.
- Conducted API testing using Postman to validate integration points and endpoints.
- Diagnosed and fixed cron job failures to ensure continuity of automation and monitoring workflows.
- Reviewed system and application logs to proactively identify and troubleshoot issues.
- Performed root cause analysis (RCA) for recurring incidents and improved issue documentation.
- Configured and troubleshooted network settings on Linux systems using tools like ifconfig, ip, netstat, ss, and ping to diagnose connectivity, DNS, and routing issues.
- Wrote SQL queries to extract and analyze business data for reporting and support purposes.
- Managed change requests through ServiceNow, with proper documentation and stakeholder alignment.
- Provided UAT support during deployment cycles and facilitated client sign-off post-validation.

Education

- **SRM UNIVERSITY** 2016-2020
B.TECH (E.C.E)
76%
- **Narayana College** 2014-2016
Pre University
96.7%
- **Narayana School** 2013-2014
HIGH SCHOOL
93%

Languages

- Can converse in English, Hindi and Telugu.

Interpersonal Skills

- Ability to work under pressure
- Communication / Leadership skills
- Analytical skills
