

WORK EXPERIENCE**WinZO Games, Delhi****Aug 2021 – July 2023****Software Development Engineer 2**

- **Building and maintaining real time gameservers** (including client communication, matchmaking) supporting millions of gameplays
 - Architectural changes to improve Funnel drop from 91% to 99.2%
 - Worked on Scaling, APM, Centralized Logging, SRE, Alerting, On-Call resolution
 - Worked on HA by eliminating SPOFs, improving blast radius, business oriented circuit breakers, burst traffic scaling
 - Worked on cost optimizations and established SLAs for the gameservers
 - Established Deployment Automation flow to reduce deployment time from 1 hour to 5 minutes
 - Solved data growth, worked on optimizations around data storage and querying
 - Built real-time leaderboards, various game formats and marketplaces
 - Integrated various 3rd party solutions to reduce hacking (casual games) and in-game collusion for RTMP games
 - Shaping entire game server stack as a Paas
 - Design and architectural contributions various other microservices - ab service, notification service, superstar, stock exchange
 - Serving personalized home page of the application at a throughput of 100k rpm
 - Redis, Kafka and MongoDB migration to managed services to enable business oriented development
 - Contributions towards Global Launch - Token based payment layer with varying spot rate for various global currencies ensuring minimum changes across services
 - **Team building contributions** - interviewed 100+ candidates on problem solving/lld/hld, mentoring interns and junior developers
- Technologies involved - NodeJs, Express, MongoDB, TypeORM, PostgreSQL, Kafka, Redis, MQTT, Docker, NewRelic, AWS*

Samsung Research Institute Bangalore**Jun 2019 – Aug 2021****Senior Software Engineer**

- **Knox for Model Protection:** - Involved in designing and development of a framework for secure execution of ML models on Samsung devices.
 - Overcame technical challenges such as splitting a ML model into sub models and inferencing them in a secure environment.
 - **Knox ML Encryption Tool:** - Developed a cross-platform desktop software for Knox SDK clients to generate secured model package, that can be deployed/inferenced with on the device using framework APIs
- Technologies involved - Python, Flask, Cryptography, Protocol buffers, Android, JNI, ONNX, AndroidNN, Kivy/KivyMD*

INTERNSHIPS & PROJECTS**Texas Instruments (India) Pvt. Ltd, Bangalore****May 2018 – July 2018****Software Intern**

- Developed a modular framework on top of Squish for GUI Testing. Started from scratch and saw the framework adapted by many teams in TI to write tests.

Smart India Hackathon (Industry - Paytm)**Dec 2018 – Mar 2019**

Problem Statement: Losses due to order cancellations and returns that e-commerce companies go through.

Solution: Creation of a rank-based buying and credit profile of the customers using Data Science and Machine Learning (Customer Segmentation)

EDUCATION**Netaji Subhas Institute of Technology****Aug 2015 – May 2019**

Bachelor of Engineering - Electronics And Communication; % - 74.20

TECHNICAL SKILLS

Languages - JavaScript/TypeScript, Java, Python, C++, Scripting (Bash, Perl)
Technologies - Nginx, Websockets, Docker, Git, Jenkins, AWS(EC2, ECS, Route 53, Cloudfront, Lambda, Secret Manager)
Frameworks/Libraries - Nodejs, Express, TypeORM, Bulljs, Kafka, Python/Flask
Databases - Redis, MongoDB, PostgreSQL, Cassandra
Other skills - Stateful and Stateless Microservices, Problem Solving, Design Patterns, RESTful APIs, Blockchain Technology

ACADEMIC & EXTRA CURRICULAR ACHIEVEMENTS

- Secured an HQ grade A1 patent (Application No - 202141016459) titled **Method and System for securing neural network models**. Led the research and grooming of the idea being the primary contributor along with the SRIB team
- Recipient of Spot award for major contributions including 2 releases at SRIB
- Winzo Excellence award for working as an IC and supporting ever changing business requirements
