

Summary

- Business Intelligence professional with 4.10 years of IT experience having extensive knowledge on design & development of high-quality business solutions using Azure technologies.
- Exposed to various phases of the SDLC model like Agile. Involved in system analysis, designing, development, unit and integration testing. Highly seasoned and accomplished with a strong record of client satisfaction. Adept at explaining highly complex data systems to a wide variety of audiences.
- Good knowledge in developing Business intelligence workflow using **Microsoft BI** technologies.
- Worked on building Centralized repository of data for various applications in Microsoft Consumer applications used by Microsoft users for generating business insights.
- Proficient in Unified Data Analytics, with practical experience utilizing tools such as Databricks, Data Factory, Delta Lake, and SQL databases.
- Excellent in troubleshooting techniques.
- Possess excellent communication and interpersonal skills, agreeable personality, positive attitude and perseverance to undertake challenging jobs.
- Committed, result oriented, Innovative, hardworking person with quest and zeal to learn new technologies.

Technical Skills

Microsoft BI Technologies : **Databricks, Data Factory, Data Lake, SQL Server, Logic Apps**
Programming Skills : **Python and Scala in Azure Data Bricks**

Certifications

Databricks Certified Data Engineer Associate
AZ-900: Microsoft Azure Fundamentals
Certified Scrum Master (CSM)

Professional Experience:

Project 1 – Marquee – [Health Domain]

Technology: Azure Databricks, Azure Data Factory, Azure SQL Database, Azure Logic Apps

Marquee is an ETL project with a sophisticated architecture aimed at establishing a centralized repository for patient data, transactions from various PMS systems, and building the essential KPIs necessary for analyzing office performance and revenue. The cloud-based system, built entirely on Azure technologies, consolidates data from diverse source systems including APIs, Azure Data Share, and BCP Files into a cohesive repository. The primary goal of this system's development was to simplify data consumption for users, empowering them to leverage critical insights for making business decisions from a centralized location. Deployment of the system occurs within an ADB, ADF, SQL Database, and ADLS environment.

Responsibilities & Details:

- Proficient in crafting Spark applications utilizing PySpark and Spark-SQL within Databricks, focusing on data extraction, transformation, and aggregation across various file formats. This experience is instrumental in analyzing and transforming data to reveal insights into customer usage patterns.
- Requirements analysis and gap analysis which was the critical phase of building such a huge and complex system.

- Development of the application phase by phase progressing from consuming the data from up streams and performing ETL to convert data into fact-dimensional modeling in Azure Data bricks and migrate the data to Azure SQL database for down streams teams.
- Trouble shooting the production failures and bugs.
- Improving performance of the system to bring down the time taken for data processing.
- Project deployments

Project 2 – WellBe – [Health Domain]

Technology: Azure Databricks, Azure Data Factory, Azure SQL Database, Azure Logic Apps

WellBe is an ETL project with an advanced architecture designed to create a centralized repository for Claims and Member plan information from multiple Payers. This cloud-based system, constructed entirely on Azure technologies, amalgamates data from GCP bucket containing various file formats such as CSV and TXT files into a unified repository. The main objective of developing this system was to streamline data consumption for users, enabling them to access crucial insights for business decision making from a centralized location. Deployment of the system takes place within an ADB, ADF, SQL Database, and ADLS environment.

Responsibilities & Details:

- Creating orchestration for copying source files using the Google Cloud package in Databricks.
- Implementing data quality checks at the raw layer while considering business rules.
- Managing end-to-end data flow through Azure Data Factory (ADF) Pipeline orchestration.
- Implementing email notifications to inform customers about the status of source file copying.

Project 3 – Unilever PLC [Sales Domain]

Technology: Azure Data Bricks, Azure Data Factory, Azure Data Lake

UNILEVER PLC is an ETL project on complex architecture to provide a single point of repository for all the data on the Sales and Promotions Consumer platform. The system is completely built on cloud using Azure technologies encompassing data of huge volumes from pipelines into a client desired output. The main intention of building such a system was to make it simpler for the users to consume data from single point to generate insights for driving the business. The system is deployed in ADB,ADLS and ADF environment.

Responsibilities & Details:

- Requirements analysis and gap analysis which was the critical phase of building such a huge and complex system.
- Development of the application phase by phase progressing from consuming the data from up streams and performing ETL to convert data into fact-dimensional modeling in Azure Data bricks
- Building data quality checks at each layer of the system to report any anomaly in the data flow.
- Improving performance of the system to bring down the time taken for data processing.
- Provide support during deployments.

Project 4: Zebra Project**Technology:** Azure Data Bricks

Zebra Project is an ETL process that is used to pull incremental data from Oracle and Insert to data lake.

Responsibilities & Details:

- Requirements analysis and gap analysis which was critical phase of building such a huge and complex system.
- SIT testing and supported for UAT testing.

Working Experience**Current Organization**

Organization : Tredence Analytics Solution Private Limited
Designation : Associate Manager
Period : Oct 2021 – Till now

Previous Organization

Organization : Capgemini Technology Services India Limited
Designation : Senior Analyst
Period : Sep 2019 – Sep 2021

Educational Qualification

S.NO.	Class/Course	School/College	YearMonth	Percentage
1	B.Tech (Electrical And Electronics Engineering)	Veltech Rangarjan & Dr.Sagunthala R&D Institute of Science and Technology	May 2019	8.7
2	Intermediate	Narayana Jr College	Mar 2015	97
3	SSC	Jnana Jyothi Vidhya Mandhir	Mar 2013	9.7

DECLARATION

I do here by affirm that the above information is true to the best of my knowledge and belief.
