Experience

MarkovML

Member of Technical Staff

Bangalore

Aug 2022 - Present

- Designed and implemented a connector framework into the Markov SaaS platform. This helps users to connect any sort of data (For ex: Snowflake,S3,Azure Blob) residing in there system and create data pipelines in our platform.
- Conceptualized and implemented an innovative analyzer framework capable of generating diverse automated insights upon user dataset uploads.
- Designed and implemented an Embedding Viewer, leveraging pre-trained models to generate multiple embeddings for comprehensive dataset insights.

Nference.ai

Senior Software Engineer

Bangalore

Feb 2021 - Jul 2022

- Collaborated in a hybrid role, combining software engineering and data science expertise to design models for ECG diagnosis.
- Led the development of the backend infrastructure for the ECG Explorer Application. This application serves as a valuable tool for viewing various trained models and extracting additional insights from the model output.

Walmart Global Tech India

Software Engineer 3

Bangalore

Sep 2020 - Feb 2021

- Spearheaded a comprehensive overhaul of a supplier-facing dashboard, leveraging modern technologies such as Spark to optimize the weekly ETL pipeline. Successfully reduced the weekly runtime from 2 hours to an efficient 45 minutes.
- Transformed existing queries into Druid queries, enhancing overall system efficiency and throughput for seamless data retrieval.
- Architected and implemented a Spring Boot application atop the persistence layer, offering diverse insights to both external vendors and internal Walmart users. This initiative aimed at providing a more user-friendly and informative interface for stakeholders.

Walmart Global Tech India

Software Engineer 2

Bangalore

Aug 2018 - Aug 2020

- Led the successful launch of OTIF 2.0 on May 11, 2019, playing a pivotal role in implementing logic changes for the calculation of On-Time In-Full (OTIF) metrics, a crucial supplier performance indicator at Walmart.
- Played a key role in the ETL process, ensuring seamless loading of essential data into a supplier-facing dashboard.
- Designed and developed an internal tool empowering Walmart Supplier Service Managers (SSMs) to efficiently monitor and comprehend supplier performance. This tool streamlined the handling of monthly chargebacks (fines), offering SSMs the flexibility to exclude suppliers based on business or administrative considerations.

Skills

Backend languages

Python, FastAPI, Golang, Java, SpringBoot

Database Technologies

SQL Server, MySQL, MongoDB, Druid, Teradata, Hive

Other Technologies

AWS, CI/CD, Docker, Kubernetes

Education

IISc Bangalore

M. Tech in Computer Science

Aug 2016 - Jun 2018

- Practical Data Science
- Game Theory
- Design And Analysis of Algorithms
- Probability and Statistics
- Thesis** - A security analysis of common mobile payment applications in India

NIT Hamirpur

B. Tech in Computer Science

Jun 2012 - Jul 2016
