Project	IDO Answers		
Customer	The Nielsen Company, USA	Domain	Marketing Research
Period	Jun 2007 to Dec 2008	Role	Developer
Environment	Cognos 8.3, Windows XP	Database	Netezza
Description	The Nielsen Company is a privately held global information and media company, and is one of the world's leading suppliers of marketing information, media information and TV ratings (Nielsen Media Research), online intelligence, mobile measurement (Nielsen Mobile), trade shows and business publications. Cognos is the Report development tool and Netezza is the database. Since there are few requirements which were not met by Cognos, to meet the requirement Composite and ADF (Application Development Framework) a third party tools present in the architecture and make it as an integrated one. Developing widgets and static prompt happens in ADF to determine how and where to modify reports and implement various functionalities. ADF connects to the Oracle Database as a backend to store the changed report connection. ADF sends request to Cognos dispatcher through SOAP. The dispatcher handles the request and pulls the appropriate report through BI Bus and executes it.		
Responsibility	• Report development using Report Studio. • Unit testing and Preparation of test cases. • Data verification by writing queries. • Analysis and bug fixing in the report. • updating with Onsite about day-to-day activities
