👤 About Me

A Backend Developer working in the Gaming Industry, passionate about contributing to a product's journey from ideation to delivery, and handling scale through optimised, efficient code.

Love to game, play music, participate in competitive programming contests, CTF playgrounds, a poker aficionado and also a peak 1600-rated chess player on chess.com.

🎓 Education

Integrated Masters of Technology - C.G.P.A. : 7.289,
Indian Institute of Technology, Roorkee

Intermediate(PCM with Entrepreneurship) - 94.2%,
Army Public School, Lucknow

Matric - C.G.P.A : 10, Army Public School, Lucknow

🧠 Skills

Go Lang (Go Routines, Gin-conic, Channels),

Java (Core Java, MVC, Spring Boot, REST APIs, JPA, Hibernate, Exception Handling),

Node.js (hapi.js, express.js),

AWS (EKS, Codepipelines, Codebuild, EC2, Docker, Kubernetes, Cloudfront, SQS, SNS, Dynamodb, RDS),

Data Structures (Arrays, Stack, Queue, Heap, Linked list, Tree, BIT, Graph, DSU),

Algorithms (Sorting, Searching, Greedy(Prim, Kruskal, Dijkstra), Bit and Graph(DFS, BFS, Topological Sort)),

Databases (DynamoDB(schema design, GSI/LSI/PK/SK), Redis (Preemptive caching, sets, hash maps, sorted sets, pipes, slots), MySQL, MongoDB),

Design Patterns (Singleton, Producer-Consumer, Domain Driven Design),

Scripting (Bash, Python),

Miscellaneous (EKL stack (Elastic Search, Kibana, Logstash), Prometheus, Amplitude Analytics, WarRoom Firefighting, On-call debugging, Azure DevOps, IntelliJ, VsCode, Git, Camunda)

🏆 Achievements and Roles

- Recognized as a "Star New Joinee" during offsite felicitations at loco.gg
- Recognized as best performer during yearly performance review in Reliance JIO
- Achieved an AIR of 4681 in JEE Mains and an AIR 6309 in JEE Advanced, 2015
- Awarded a Silver Medal for securing highest marks in Maths and Entrepreneurship in CBSE Boards, 2015
- Scored 2269 in Scholastic Assessment Test (SAT)
- Elected as Hostel Secretary in Jawahar Bhawan, IIT-R

📖 Publications

Proterozoic Crustal Evolution of Northern Domain of the Eastern Ghats Mobile Belt, India, Goldschmidt

May 2019

Paleoarchaen Crustal Evolution of the Bundelkhand Craton, Elsevier's Earth Oldest Rocks

Mar 2017

👜 Professional Experience

loco.gg, Backend Developer 📍

Sep 2022 – present | Remote

- **Designed (low and high level), and owned the entire gamification engine**, called task-centre currently used on the platform, and integrated it with multiple services, such as the Chat Service, and the Streaming service, and the notification service. **Built the service on go-lang** from scratch. Made use of multiple AWS features such as SQS, DynamoDb. Optimised the design to ensure low latency in core functionalities.
- **Designed and built the notification service from scratch** to nudge/notify users for use cases such as : gamification nudges, stream donation nudges and more, and was integrated with backend services such as task-centre, leaderboard-service etc. Designed it (low and high level) and built it on go-lang.
- **Separated the deployments based on SQS and API pods with the assistance of infra-team, to enable independent scaling through HPAs on different cloud-watch metrics** (such as API latency, messages in queue) for both task-centre and notification-service.
- Improved chat architecture and **migrated the codebase from node.js to go-lang**, and ultimately owned the end to end flow of all three chat-services (API, scheduler, and handler). Moved from **MQTT to Rest API** based chat-send functionalities to improve stability. **Integrated prometheus** to track various chat metrics, such as foul messages, rate limiting etc, to be used by the product/ops teams.
- **Migrated and improved Authorisation APIs from the legacy Django service to the new go-service** for signup/login, jwt-auth-token and other user-auth features (totalling to 20 APIs).
- **Was on-call and did production firefighting** during high value live streams and tournaments (with upwards of 16M ACU on the streams)
- Worked on a seasonal year end landing page showcasing popular streamers and their streaming statistics, and a new feature which enables users to spend some earned gold to send messages to their favourite streamers. Used node.js, dynamodb and SQL for the quick last minute development.

sugar.fit, Backend Developer 📍

Dec 2021 – Aug 2022 | Bangalore, India

- Owned and delivered key features in two different user-facing apps - **sugar.fit** and **ultra.fit**, as well as coach/ops-facing web-apps, including but not limited to:
 - Entire **logging flow** which included food, exercise, sleep, and glucose loggings. Enriched food and exercise catalogues to enable users to choose from a variety of activities/foods to log, by **scraping data** from "appropriate" sources online.
 - **Slack-based alerting system** to alert Ops, with additional supported for SMS and Emails to be added in the future
- Owned two services end-to-end, built them from scratch. Adopted an **event-driven design** to ensure low latency, and avoid bottlenecks and thread blocking under heavy load. Integrated out-of-the-box **AWS functionalities** such as SNS, SQS.
- Revamped multiple existing flows, such as doctor and coach consultations, and **handled migration of millions of user-specific health data entries**.

Jio Platforms Ltd., Software Engineer

Aug 2020 – Nov 2021 | Mumbai, India

- **Backend Developer** : Worked on Minutes of Meeting Portal and Action Tracker Portal and other miscellaneous features and bugfixes, using Java (Spring Boot), APIs, Database (SQL)
- **Automation Developer** : Implemented an open source workflow tool for automating various business processes, including but not limited to workflows for Automated Vulnerability Patching, and Azure AD flows.

Boise State University, Research Intern

Apr 2018 – Aug 2018 | Boise, ID, USA
