INDUSTRIAL EXPERIENCE

- | | | |
|---------------------------------------|---|--|
| • Moschip technologies Limited | — | Sr. Software Engineer(Aug 2022- Present) |
| • Mbit computraining Pvt Ltd | — | Embedded Engineer-II-2021. |
| • Pathak Corporation Pvt. Ltd | — | IoT Engineer -2018. |
| • CoalTech Automation | — | Embedded Engineer-2017. |
| • Kinetic Green | — | Trainee Engineer- 2016 |

SKILL SETS

- Android Kernel Testing, Build, Debugging over its tools (Trace32, Axiom, demesg logs, QXDM).
- C- Programming Embedded C.
- Embedded protocol I2C, SPI UART, MODBUS (rs485), FreeRTOS, DMA.
- Linux Device Driver, Yocto, BSP.
- ESP32, Arduino328p, STM32, NXP imx6, TI(siltara), Raspberry pi.
- Android Kernel sync and build Automation tools Axiom, Package warehouse.
- Pcat, crash dump(collect android kernel log), git, gerrit.

Auxiliary skill set

- PCB design (in eagle).
- Embedded system Design.

EDUCATION

- | | |
|-----------|---|
| 2016-2017 | Post-graduation Diploma in Embedded System Design, CDAC-ACTS, Bangalore |
| 2010-2015 | Bachelors of Engineering in Electronics, G.H. Raisonni Ahmednagar(India), <ul style="list-style-type: none">• Percentage: 67.00 %. |
| 2007-2010 | Diploma in Electronics and communication, Govt. Polytechnic Gadchiroli(India) <ul style="list-style-type: none">• Percentage: 64.00 %. |
| 2007 | HSC <ul style="list-style-type: none">• Percentage: 49.00 %. |
| 2005 | SSC <ul style="list-style-type: none">• Percentage: 55 %. |

Projects Undertaken

- **Fastrpc Framework(Qualcomm— 2022):**

Platform:- Android Linux(LA), Embedded Linux(LE) Devices.

Tools:- Axiom, Package warehouse, Crash Dump, QXDM,Yocto.

Role & Responsibility – Sr. Software Engineer.

1. Building kernel using android Linux toolchain.
2. Handling issue towards HLOS as well as DSP reported by customer.
3. Debugging the kernel.
4. Reproduce and finding the issue using trace 32, QXDM and fix issue.

High end Qualcomm chipset having different SOC like, CDSP(Compute DSP), ADSP(Audio DSP), SMPI etc. For Heavy task execution with low latency the fastrpc framework is used.CPU share the task to DSP using fastrpc framework and DSP get back result to CPU.

- **Mirror Eye 2-Peregrine (Client TCS— 2021-2022):**

PLATFORM– Petalinux, Embedded Linux.

Tools– Yocto, Linux Device Driver, BSP.

Role & Responsibility – Embedded Engineer-II.

1. Gstreamer app Implementation for user space using c.
2. Ethernet driver adds in kernel device tree.
3. Customize and configure the Linux kernel, device drivers, and system software components using Yocto
4. Kernel Building and Debug.
5. Implementation and Testing.

Mirror Eye2 project in which the traditional mirror located outside the truck (Long Truck) replace by HD camera and that real time video display on display inside the Cabin. Same time videos are stream over the Ethernet using Gstreamer for other device.

- **Smart Electric Board (Pathak Corporation Pvt. Ltd.– 2020):**

PLATFORM– Embedded C and IoT.

Tools – Cube IDE, Eclips, STM32, ESP32.

Role & Responsibility – IoT Engineer.

1. Embedded Firmware Development.
2. Communication between device and server (over http).
3. Collaborate with Hardware Design team.
4. Identify hardware features.

Smart Electric Board is IoT based project. The Electric board operated by Android application as well as touch switch. The Smart Electric Board having OLED display on which shows the live status of switch as well as current consumption.

- **Power Monitoring System (Pathak Corporation Pvt. Ltd. – 2019):**

PLATFORM- Embedded C and IOT.

Tools— Cube IDE, STM32.

Role & Responsibility – IoT Engineer.

1. Embedded Firmware Development.
2. Develop Test codes to test Hardware modules.
3. Developed protocol(MQTT) between device and AWS server.
4. Project Documentation.

PMS is a IOT based project, here is some electrical parameter like voltage, current power factor etc, these parameter read from SATEC Power meter by microcontroller STM32 over the MOD bus. These parameters

are uploading over the server using GSM. Values are uploaded to database after every 15 min and these

values website.

- **WMS System (CoalTech Automation-2017):**

Platform- Embedded C AND IOT

Tool- Atmel Studio.

Role and Responsibility- Embedded Engineer.

1. Develop the Firmware.
2. Bare metal drivers.
3. Software version control.
4. Project Documentation.

Waste Management System is IoT based project of Mahindra and Mahindra Nagpur. The waste generated from Transmission unit, Production unit like a plastic and wooden boxes that are collected into the bin. The load cell assembly connected at bottom of bin. The load cell connected to PLC through MOD bus, these values are read by PLC and send to the controller through RS232, these values are directly send to database using GSM module. It is very easy to engineers analyzing the waste product in one day.

Personal Details

Name :- Yogesh V. Jilhare.

Address:- Bandlaguda Jagir, Hyderabad.
