SKILLS

Languages & Technologies

Java-17, Spring Framework, Spring Boot, RestAPI, GIT, Spring MVC, Hibernate, OOP

Database

MySQL, Oracle

Tools

IntelliJ, Azure Devops, BitBucket, Bamboo, Jenkins, Orchestration & Containerisation with Docker, K8s, Helm charts, SQL Developer, Jira, Splunk.

OS

Linux, Windows

SDLC Methodology

Agile

EDUCATION

Bachelor of Computer Science and Engineering, Gyan Ganga College of Technology

July 2015 – June 2019
Jabalpur, India

OBJECTIVE

I'm a passionate Java developer with over 4 years of experience, aiming to utilize my skills in Java programming and Spring Framework to contribute to exciting software projects. My commitment lies in delivering top-notch solutions within project timelines while constantly enhancing my skills in DevOps and cloud technologies. I'm enthusiastic about collaborating with dynamic teams in a challenging environment to push boundaries, innovate, and accomplish business goals.

I do have the valid work visa for Netherlands.

WORK EXPERIENCE

Amdocs Technology, Software Developer– JAVA [Project - Vodafone Czech/Romania]

November 2021 – January 2024 | Pune, India

- Created and managed Java-based web applications crucial for enhancing business operations, streamlining workflows, and providing exceptional user experiences across various projects.
- Implemented and maintained RESTful APIs in Java, facilitating seamless communication and integration within the project ecosystem.
- Designed and implemented critical features in Offer Catalog, enabling real-time configuration of product offerings like voice plans and data packages. Developed intricate control engines for seamless computation and display of real-time data. Also, enhanced server performance by 25% through API optimisations.
- Utilised Core Java, Spring Boot, and Hibernate for building robust applications, implementing SOLID principles, and advanced error handling techniques.
- Developed and delivered complex software tasks focusing on platform and technology stacks such as Kubernetes, Helm charts, Jenkins, and Openet Project Archetype, ensuring robust solutions in high-demand environments.
- Collaborated with the Openet team to deploy Amdocs's MS360 tool in their environment and configured CI/CD pipelines for end-to-end automation using Jenkins. Orchestrated deployment processes with Kubernetes and Helm.
- Collaborated with stakeholders to understand business challenges regularly, ensuring delivery of high-quality software products.
- Collaborated closely with the DevOps team to containerise microservices using Docker and orchestrate them efficiently with Kubernetes, optimising deployment processes.
- Trained and mentored new and junior developers, conducting code reviews and offering technical guidance to support their growth.

CERTIFICATES

- AZ-900 Microsoft Azure Fundamental Certification - February 2021
- Core Java 09/2019 and advance JAVA 09/2019

INTERESTS

Singing, Cooking, Playing Chess

Hexaware Technologies, Software Engineer - JAVA [Project -Chicago Mercantile Exchange]

October 2019 – November 2021 | Chennai, India

- Engineered scalable backend solutions for high-traffic web applications, ensuring robust performance and seamless user experiences.
- Collaborated with customers to gather enhancement requests for existing products and implemented improvements accordingly.
- Developed a backend Chatbot for an instant messaging platform, integrating industry-standard technologies such as Spring Boot and Microservices architecture. Enhanced user experience by defaulting all users to the chatbot and migrating from existing to API bot functionality.
- Handled patch maintenance and debugging, ensuring software stability. Deployed patches to stage and production servers for seamless updates.
- Proficient in writing JUnit and integration tests, with expertise in automated API testing using the Karate framework.
- Skilled in real-time application monitoring with Splunk, ensuring optimal performance and reliability.

Hexaware Technologies, Software Engineer Trainee (Java and Springboot)

July 2019 – October 2019 | Chennai, India

- Acquired practical experience in developing, implementing, and maintaining internal web applications.
- Conducted JUnit testing to verify the accuracy and functionality of software, ensuring it meets the required standards and performs effectively.
- Identified and tracked software defects and inconsistencies within the project's codebase, ensuring timely resolution and overall system integrity.
- Completed a 3-month internship focusing on web application development with HTML, CSS, and JavaScript.
- Engaged in code reviews, receiving commendation for strong problem-solving abilities.
