EDUCATION

Amity University

GGPA 8.83

Uttar Pradesh, India

July. 2016 – Jun 2020

EXPERIENCE

Gojek Tech, Bangalore, India

Role Highlight

Software Developer - III

April 2024 – Present

- Expanding on the responsibilities, I increased my area of expertise from my team Revenue Growth, to the whole of Transport. Actively participated in multiple ADR discussions across transport, playing a phenomenal role, in ensuring every **project is executed in a scalable, quicker GTM manner**. Took up mentoring new engineers actively, ensuring the same quality is maintained and enhanced. Drove multiple engineering initiatives within the team, and Transport. Ensured tech team strongly becomes business enablers.

Key Projects

- Payment Service Consolidation:** Payments System was spread across multiple services, across multiple languages (Go and Clojure). There were migration plans that were left hanging. **Helped the product in prioritizing this by making them understand the potential danger of continuing with half-baked architecture**. Led the plan, execution, and delivery of consolidating the entire payments system, to one service, rewriting the DB schema, and building a worker setup in Go with the help of ziggurat go. Also, planned and executed for automated audit for the entire flow, to ensure, no transaction was missed, and no transaction was double charged. Planned a rollout and rollback strategy, ensuring the system always stays in a safe state.

Gojek Tech, Bangalore, India

Role Highlight

Software Developer - II

October 2021 – April 2024

- Became Golang expert for the team, and **led large-scale engineering initiatives on pricing and payments domain**. Being a domain expert, ensured the knowledge was well transferred and replicated amongst the team. Contributed heavily to the team documentation, architecture reviews, and tech specs. Also established me as a Production warrior, not just for my team but the entire transport. Led root cause analysis of multiple incidents. Took incident action items proactively that helped reduce the incidents **MTTR from 35 min to 10 min**, and mean **pager count from 25/week, to less than 10/week**.

Key Projects

- Insurance Upsell Nudge Card:** Led the development of smart and contextual upsell nudge cards, collaborating with Frontend, Design, Research, and Product, which helped the organization surpass the multi-million \$\$\$adoption target of insurance penetration. The upsell card was intelligently placed only on orders that had a higher chance of conversions, and it was ensured, that the user journey is not spoiled, by having a configurable frequency algorithm around when or when not Upsell card will be shown. Developed the entire framework in very extensible, experimentable, and plug-and-play models. This **led to Insurance penetration of 32% to 45%** in different markets, over the **earlier penetration of 3%-7%**, also surpassing the adoption **target of 15%**.
- Fare Breakdown Migration:** Led the migration and refactoring of pricing database systems from a legacy monolith to an independent microservice of pricing. Developed a scalable, maintainable, and highly reliable pricing system. Used Google Cloud Spanner for database in the microservice, after **performing dedicated load testing on several databases under certain stress conditions**. Led the initiative from the Pricing Microservice team, collaborating highly with the backend team of the monolith to draw the architecture, lead ADR, execution, and most critical part, **rollout without 0 prod impact**. Ensured that pricing data was always consistent, and even in distributed transactions, state management and restoration were proper.

Gojek Tech, Bangalore, India

Role Highlight

Software Developer - I

July 2020 – October 2021

- Learned Golang, Ruby, and Clojure on the role. Was an active pair in multiple key projects of the team. With my problem-solving skills, team work helped the team to deliver the OKRs effectively.

Key Projects

- **Singapore Routing Experiment:** Worked on SG routing experiment changes which allowed products to experiment between shortest and fastest routes. Collaborated with Cartography and Product to execute this.
- **Far Pickup Incentive:** Worked as an active pair on the Far Pickup Incentive project, collaborating with stakeholders from the driver platform, Singapore business, product, etc. **Touched multiple critical screens of the driver flow**, Bid screens, on-the-way screens, driver order summary screens, etc. Build a system to support dynamic pricing, and price changes at the time of allocation. This helped **increase the driver acceptance rate by 12%**. The flexibility fee framework was later reused to serve dynamic pricing initiatives, which **save more than 3.2 million USD annually**.

AWARDS

WE Program, offered by TalentSprint, supported by Google

June 2019 -June 2020

- Selected in 100 Girls Engineers cohort out of 8k+ participants, received training and mentoring from industry leaders. Further awarded, High Consistent Performer Award in 100 girls, given to 10 top performing girls.

Ashok K Chauhan 100% Scholarship

July 2016 – June 2020

- Received scholarship for Bachelor's in Technology in Computer Science at Amity University. 100% fee waiver based on merit on 12th performance, and consecutive semester performance.

CERTIFICATIONS

Courses: IBM DL010EN : Deep Learning Fundamentals with Keras by edX,DAT263x: Introduction to Artificial Intelligence (AI) by edX,The Joy of Computing using Python by NPTEL, Machine Learning Basics by Coursera

SKILL-SET

Languages: Golang, Python, Ruby, Clojure

Tools & Platforms: Git, Jira, Docker, New Relic, Grafana, GCP, Kafka, Redis

Databases: Postgresql, Cloudspanner
