Experience

JULY 2021 - PRESENT

Caastle Inc. (Formerly GwynnieBee) - *Principal Engineer*

Working as a Javascript Developer and Node.js engineer for Caastle

Projects:

Caastle Internal apps - Caastle Internal apps for inventory, marketing, and business operations

- **React Adoption** - Some platform apps were on YUI, Backbone, moved it to use **React** on the client and express on the backend.
- **React Common Component Library** - used storybook to index components and through npm (private) shared the component within Caastle
- **Code sharing in Internal apps** - extracted common code like s3, logger to separate repo and shared as npm package
- **Single sign on (SSO) for Internal apps** - Created a single google app which authenticate all the apps in same environment and give SSO kind of control
- **Designed** a solution which bypass google login for running security tests (ZAP)
- **Asset Collection tool** - Implemented a platform app to collect the assets (images/text) for new tenant onboarding
- **Provisioning UI tool** - Implemented Provisioning UI tool that reads the JSON data and has CRUD operation on it.
- Assigned code reviewer of Client, **Node**, and test code
- **Tech Stack:** React.js, Backbone.js, Require.js, Grunt, Handlebars, Webpack, Maven

SF Client - Client-side web app platform for e-commerce stores.

- **Borrow Script** - Implemented a script that is added as an external script on tenant platforms to show the *Borrow button* on the product page.
- **Seasonal Refresh Tool** - Implemented a web app in React.js that accepts tenant-specific images (in CSV) and adds them to Shopify meta-fields.
- **Cookie-scanner** - Written Galen test which collects cookies from the browser and matches them with a predefined baseline and emails the diff to a google group via Bamboo.
- **Google Identity Services** - Migrated to google identity services from platform.js library for Google sign-in
- **ReCaptcha v3** - Integrated Google ReCaptcha v3 in the login, signup, and reset password flow to protect from spam
- **Tech Stack:** React.js, Backbone.js, HTML/CSS, Shopify Liquid, Kibana, Python

JULY 2017 - JULY 2021

Caastle Inc. (Formerly GwynnieBee) - *Senior Software Engineer*

Working as a Javascript Developer and Node.js engineer for Caastle

Projects:

SF Client - Client-side web app platform for e-commerce stores.

- **Storefront Builder** - Implemented python script to read the styling from google sheet and create scss and liquid code from it (GB-owned Straight Jacketing feature)
- **React Adaption** - Setup transition from Backbone to **React** and moved the Backbone Product page to render from **React**.
- **Lead the design and implementation** for various features like sizeQuiz, login, product page, and subscription pages, in a configurable way so the same code can be used for multiple tenants.
- **Social Sign-in Integration** - Implemented **Social Sign support (Facebook, google)** on GB and Caastle platform on the client side
- Researched and Significantly reduced the page load time of activation pages
- Assigned code reviewer of Client, **Node**, and test code
- **Tech Stack:** React.js, Backbone.js, Require.js, Grunt, Handlebars, HTML/CSS, Shopify Liquid, Kibana, OptimizelyX, Python, Galen

Node - NodeJS based REST Api layer

- Developed and documented REST APIs that aggregates and parse data from various JAVA microservices to be consumed by web/native clients.
- Migrated various APIs from the YUI framework to Express.
- To make **node** api serve faster, implemented in-memory caching module

- Tech Stack: Typescript, Express, NodeJS, Mojito, Chai.

Caastle-Calendar (Hack-a-thon 2019)-

- Implemented a Calendar feature where the user can set what she wants to wear for a week (along with image) similar to google calendar
- Tech Stack: Backbone.js, HTML5, CSS3, JQuery Calendar

Caastle-Lookup (text to video) (Hack-a-thon 2018)-

- Implemented a Lookup feature which creates a 2min video from user journey on Caastle (similar to Facebook 1min memorial video)
- Tech Stack: Backbone.js, HTML5, CSS3, Node.js, FFmpeg

JUNE 2015 - JUL 2017

GwynnieBee – Software Engineer

- Owned features like Size Advisor, SizeQuiz, and Gift having been responsible for feature designing, client and **node** API implementation, writing Galen tests, and finally releasing the feature to production.
- Developed and documented user-facing features for web applications using the Backbone.js framework.
- Implemented Galen tests for various flows and features.
- Developed and documented multiple NodeJs-based REST APIs.
- Migrated JAVA-based Selenium integration tests to JS-based Selenium tests using the Galen framework.
- Implemented **Single Sign On** (SSO) on GB Owned sites from client side

JUNE 2012 - JUL 2013

ITM Maharajganj – Assistant Professor

- Taught Data Structure & Algorithm and other Engg subjects

Education

Year	Degree	Institution	Percentage/CGPA
2013 - 2015	M.Tech (Computer Science)	IIT Kanpur	7.14
2008 - 2012	B. Tech (Computer Science)	Bharat Institute of Technology Meerut	75.94
2005 - 2007	Class XII	Govt. Jubilee Inter College GKP	70.40
2004 - 2005	Class X	Ram Harsh H.S School	76.50

Academic Projects

Handwritten Character Recognition for English alphabets and digits using ML Techniques (July 2013 - Dec 2013) -

- Identified and extracted different features from character images that are unique in their own way and trained different classifiers.
- Tech Stack: Java, Matlab, Weka

Minutiae points extraction from the fingerprint image (July 2013 - Dec 2013) -

- Developed a novel technique to identify true minutiae points from fingerprint.
- Tested on the IITK database having fingerprints of 100 people and 10 fingerprints of each person.
- Tech Stack: Matlab, Weka

M.Tech Thesis

Study of Dependent Typed Programming Language Agda and Proving set of Integer forms a commutative ring in Agda (July 2014 - June 2015) -

- To check the correctness of a program or theorem is an ever-present problem in the computer science world.
- To ease this problem some proof assistants were made, Agda is one of them.
- In this thesis, we need to study agda and give proof that a set of Integers forms a commutative ring in agda.
- Tech Stack: Functional programming language e.g Haskell, Agda

Achievements

- Cleared GATE-2013 with AIR 627
- Selected for OCES/DGFS-2013 programs of the BARC Training Schools, through the Online Examination.

- Runner-up in the CHESS tournament at Inter College Annual Fest, Abhivyakti 2k10 held at BIT Meerut.
- Teaching Assistant for the course "Computing Laboratory". - (Aug 2013 - Nov 2013)
- Teaching Assistant for course "Principle of Programming Language". - (Aug 2014 - Nov 2014)
- Teaching Assistant for the course "Mathematics For Machine Learning" - (Feb 2014 - June 2014)
