SUMMARY

- Backend Java developer with great problem-solving skills and **7.3 years** of experience in **developing highly scalable and distributed systems**.
- Working at Paytm as an **individual contributor** and **mentoring a team of 4 people**.
- Strong knowledge of data structures and algorithms.
- Consistently eager to learn new technologies and explore innovative solutions that drive impactful results.

TECHNICAL SKILLS

- **Programming Language:** JAVA, Python
- **Framework:** Spring Boot, Hibernate
- **Scripting Language:** JavaScript
- **Database:** MySQL, Elastic Search, Cassandra, Redis
- **Web Services:** REST API
- **Frontend:** Angular 4
- **Version Control:** GIT, SVN
- **Deployment:** Docker, Jenkins
- **Testing Framework:** JUnit5, Mockito
- **Streaming:** Apache Kafka, Apache storm, Apache Airflow
- **Others:** OOPs, UML, Maven, Gradle, CI/CD, AWS, SDLC, Agile Methodologies, Jira, Grafana, Prometheus, Loki

WORK EXPERIENCE

Paytm (Noida, India)

April 2022–Present

Technical Lead

- Working in the promotion team, responsible for providing various gratifications to user upon successful application of promo codes and handle a **scale of 3 millions req/day**.
- Architected and designed an end-to-end Paytm loyalty system processing **40 million transactions daily**.
- Optimized existing Storm topology by implementing batching and reducing duplicate Cassandra query calls to run topology on **single worker instead of 4 workers**. These enhancement resulted in significant performance improvements by **10x increase in throughput** and an approximately **50% reduction in latencies**.
- Implemented a write-through cache within the Storm topology, resulting in a **20% reduction in latency** for promo code application API calls by minimizing Elastic Search Queries.
- Developed the entire data ingestion flow for orders into Elastic search, enabling dynamic velocity conditions to be triggered based on this data.
- Executed migrations of Elastic Search and Kafka cluster to newer versions, taking approaches to ensure **zero to minimal downtime and no data loss**.
- Identified and executed cost-saving initiatives by implementing Kafka and Elastic search

compression, reducing Storm network calls between workers, applying rack awareness policies, eliminating unnecessary data flows and merging Elastic search clusters. These efforts resulted in **cost reduction of approximately INR 175,000/month**.

- Worked on some other charters as well which includes giving zero discount to client, reconciliation job etc.
- Implemented an alerting system to notify campaign owners via email in the event that a campaign is accessed by multiple users and crossed the threshold that we have specified within the past hour. It is to **detect burn at very early stage to avoid losses**.

Prilient Information Technologies (Noida, India)

June 2019 - March 2022

Software Engineer

- Synced real-time and historical data from approximately **1000 physical stores** seamlessly using Apache Kafka.
- Developed connectors with **automated update capabilities** to efficiently transmit data to our servers
- Utilized **Apache Airflow** to automate the nightly auditing process for the synchronized data.

Oodles Technologies (Gurgaon, India)

May 2018 - June 2019

Associate Consultant Development

- Contributed to the development of several micro services including **order-validation and matching** services for a cryptocurrency exchange project.
- Used **ELK and Filebeat** stack for centralized logging of all micro-services
- Integrate web socket and apis on front-end using Angular 4.

Monotype (Noida, India)

August 2017- April 2018

Software Engineer

- Worked on internal project AARAM(Automated automation of rest API at Monotype).
- Created installer for both Mac and windows system for the AARAM software.

EDUCATION

Technological Institute of Textiles & Sciences, Bhiwani

2013-2017

B.Tech—Computer Science & Engineering

76%

ACHIVEMENTS

- Rockstar award at Paytm.
- Star of the quarter at Oodles Technologies.
