EDUCATION

Indian Institute of Technology, Kharagpur

July 2018 - June 2022

Bachelor of Technology (CGPA: 8.03/10)

TECHNICAL SKILLS

Languages: Python, Node.js, Golang, C++

Technologies and Frameworks: Redis, Kafka, AWS SQS, Lambdas Postgres, Docker, DataDog, Web 3.0

EXPERIENCE

TimelyAI | Product Engineer

November 2023 - April 2024

Photos Product

- Led end-to-end development of **Photos Product**, achieving a **63%** increase in user engagement and reducing user churn rate by **47%**
- Engineered Duplicate Detection Mechanism for Google Business Profile photos, significantly reducing redundancy and improving data integrity
- Implemented AI-powered low-res Image Enhancer, enhancing user experience and visual quality while streamlining the Photos Product
- Techstack used - **Node.js, Python, AWS Lambdas, EventBridge Scheduler, Postgres**

Appointment Booking and Deposits

- Integrated Square APIs for seamless deposit payments within the company app, increasing client acquisition by **72%**
- Developed scheduling system to automate bookings, aligning seamlessly with payment process for deposit payments with Square and other major platforms
- Implemented email and SMS strategies, including reminders, to boost user engagement and transaction completion
- Techstack used - **Node.js, AWS Lambdas, EventBridge Scheduler, AWS SES, Twilio, Postgres**

Instagram Media and Posts

- Led seamless Instagram integration as Developer Relations liaison with Meta, facilitating enhanced platform functionality
- Spearheaded the creation of a new revenue stream by strategically integrating Instagram into the company's platform, resulting in a notable **48%** increase in overall company revenue
- Engineered and implemented an automated Instagram post generation feature, driving efficiency and bolstering user engagement
- Techstack used - **Node.js, AWS Lambdas, EventBridge Scheduler, Postgres**

CoinDCX - India's Largest Crypto Exchange | Software Engineer

June 2022 - October 2023

Okto - DeFi Crypto Wallet

- Designed and developed Gas Station Service for Okto platform which provided gas fees for executing blockchain transactions
- Took sole responsibility and built the core gas fees transfer logic from scratch which served **80%** transaction volume
- Researched and made a proof of concept of different cross chain providers
- Built an aggregation service layer on top of all providers which resulted decrement in the order placement time by **24%**
- Techstack used - **Node.js, Kafka, Redis**

Okto Wallet Connect

- Researched and implemented a proof of concept of the wallet connect feature which could connect any browser decentralized app with mobile wallet
- Designed a high volume microservice which allows third party vendors to interact with Okto core platform
- On-boarded external transaction preview simulators for a better user experience resulting in increase of user engagement of **46%**
- Techstack used - **Golang, Postgres, Kafka, Redis**
