

Yash Deep

yashdeepgkp19@gmail.com — +91-6393734550 — LinkedIn — GitHub — Leetcode

SKILLS

- **Programming and CS:** : Python, C/C++, Java, Data Structure and Algorithm, OOPS, DBMS, OS
- **ML Frameworks:** Tensorflow, PyTorch, LangChain, Hugging Face, Flask, DeepStream, GStreamer, Triton
- **DevOps and Cloud:** Linux, Bash, Docker, Git, CI/CD Jenkin, Kubernetes, AWS, Azure, Grafana, Prometheus

EXPERIENCE

Wobot.ai

ML Engineer I

Delhi, India

March 2024 – Present

- Trained and evaluated multiple **YOLO-based object detection models** on proprietary datasets. Achieved **mAP@0.5–0.95 above 0.80** for most classes, ensuring production readiness.
- Exported and optimized classification and detection models using **ONNX, HailoRT, OpenVINO** and **TensorRT**, enabling low-latency, hardware-accelerated inference on edge and server-grade devices.
- Integrated and optimized models for edge accelerators including **NVIDIA Jetson, Hailo** and **Intel Movidius**, enabling sub-100ms inference on constrained devices.
- Developed and maintained multi-object tracking systems, including **Re-ID** and **multi-camera tracking** with a global identity manager to persist identities across camera feeds.
- Designed and deployed real-time computer vision pipelines using **NVIDIA DeepStream, cuDNN**, and **Triton Inference Server**, improving inference efficiency across production systems.
- Benchmarked and integrated VLMs and zero-shot classification systems into commercial use cases, evaluating trade-offs between generalization and latency.
- Fine-tuned **GPT** and open-source vision language models on internal datasets for custom NLP/CV fusion use cases.
- Developed real-time QSR-focused computer vision applications (e.g., staff redaction, unauthorized entry detection, footfall count), improving operational visibility for clients.
- Built a scalable pub-sub RTSP ingestion system using **NATS.io** with JetStream, cutting infrastructure cost by 68% and improving reliability for concurrent stream processing.
- Implemented and reproduced research papers in Computer Vision, adapting SOTA models into production ready pipelines with measurable performance improvements.
- Migrated backend services from **Flask** to **FastAPI**, leveraging asynchronous I/O to improve API response times and scalability.
- Built automation libraries that replaced manual deployment workflows, enabling faster, consistent, and error-free model rollouts across production environments.
- Implemented observability solutions using **Prometheus** and **Grafana** for system resource monitoring, performance tracking, and proactive incident detection across production ML pipelines.
- Maintained the company's internal ML/CV library, curating up-to-date utilities, pre-trained models, and documentation for cross-team collaboration.

Proton Data Lab

MLOps Engineer Intern

Remote

December 2023 – March 2024

- Developed a proposal review system using **OpenAI GPT-4** and **Retrieval-Augmented Generation (RAG)**, enabling classification and natural language communication with users.
- Deployed and hosted a user-friendly proposal submission and review platform using **FastAPI, Docker, AWS EC2, Route 53**, and **Application Load Balancer (ALB)**.
- Automated biosketch creation using LLMs, significantly reducing manual effort by training models to extract and format relevant user data from inputs and documents with high accuracy.

Neolen

AI Developer Intern

Delhi, India

October 2022 – December 2022

- Developed a **Lip Synthesis GAN** model achieving **83.4% off-synchrony accuracy**, and enhanced video resolution using **StackGAN**.
- Built and deployed generator and discriminator models using **TensorRT** and **FastAPI**, resulting in a **30% increase in processing speed** and enabling scalable deployment.

EDUCATION

Ajay Kumar Garg Engineering College

Bachelor of Technology in Information Technology

2020 — 2024

CGPA 8.30

Little Flower School, Gorakhpur

Intermediate, ISC

2019 — 2020

Percentage — 91%

Little Flower School, Gorakhpur

High School, ICSE

2017 — 2018

Percentage — 93%

ACHIEVEMENTS

- Winner of Asia's biggest Hackathon Smart India Hackathon 2022 having 40000 team's participations and 500+ problem statement.
- Selected as finalist for Asia's biggest Hackathon Smart India Hackathon 2023 for Problem Statement given by Ministry of Railway.
- Ranked top 22.08% on LeetCode platform, demonstrating strong problem-solving skills and algorithm proficiency with 300+ problems and 1600+ rating.

CERTIFICATIONS

- DevOps Beginners to Advanced with Projects – 2023 by Imran Teli.
- The Complete Neural Networks Bootcamp: Theory, Applications by Fawaz Sammani.
- AWS Lambda and the Serverless Framework - Hands On Learning! by Paulo Dichone
- Database Management System with Infosys Springboard.
