

Current role	Machine learning engineer at Stealth startup
Technologies	PyTorch, Python, NumPy, Pandas, Git, Docker, Tensorflow

Work experience

Machine learning engineer, Stealth startup 🏢

Aug 2024 - Present (1y)

- PyTorch
- Developing cloud gaming platform for MacOS
 - Utilizing deep learning models for on-device upscaling to improve image quality with minimal bandwidth
 - Conducting performance benchmarking and optimizing upscaling models

Computer Vision engineer, K | Lens GmbH 🏢

May 2023 - Mar 2024 (10m)

- Python NumPy Pandas PyTorch Git
- Conducted data pre-processing and annotation for training deep learning models.
 - Developed and fine-tuned YOLO models to automate quality inspection in industrial manufacturing.
 - Applied optimization to models for effecient computation.

Junior Machine learning engineer, PreciBake GmbH 🏢

Sep 2022 - Nov 2022 (2m)

- Docker Python PyTorch Git
- Improved deep learning models to enhance object detection in fast food franchise kitchens, minimizing food waste and enhancing operational efficiency.
 - Enhanced internal YOLOX model's training efficiency by 20% through implementation of automatic mixed precision.

Research Assistant, German Research Institute for Artificial Intelligence (DFKI) 🏢

Jan 2021 - Apr 2022 (1y 3m)

- Python NumPy Pandas PyTorch Git
- Pre-processed hand-drawn digital marker drawings to prepare them for deep learning model training.
 - Developed and implemented a custom U-Net model for segmenting and classifying digital marker drawings, aiding in the assessment of neuropsychological dysfunctions.
 - Attained a segmentation accuracy of 79% IoU and 72% classification accuracy.

Python

- Analyzed and studied the SSD (Single-Shot Detector) object detection network and trained it on the WIDER-face data set.
- Achieved a performance level similar to the state of the art in face detection.

Python

Tensorflow

NumPy

- Developed LSTM model for contextual next word suggestions to enhance output diversity while preserving relevance.
- Utilized hidden layer states of output words as vectors to assess diversity in recommendations.
- Implemented MMR-like approach and evaluated network performance across various datasets.

Education

MSc. Computer Science

MSc.(Hons) Mathematics and B.E.(Hons) Computer Science
