SUMMARY

Software Developer with 3 years of experience, specializing in building microservices and optimizing system performance by leveraging Golang, Docker, AWS, and Kubernetes. I design and implement scalable and reliable solutions, ensuring code quality and performance. I've successfully delivered projects across cloud, e-learning, ERP, and Healthcare domains. Passionate about creating innovative solutions, working with cutting-edge technologies like Docker, Kubernetes, and Grafana, and solving complex problems. Committed to continuous learning and sharing knowledge.

WORK EXPERIENCE

Software Engineer, Gophers Lab Technologies

January 2024 - Present

- **Scalable Architecture:** Contributed to a microservice-based system using Golang and AWS SQS, boosting scalability and maintainability by 30% through asynchronous processing and modular workflows.
- **Workflow-Driven Systems:** Designed workflow-based execution for customer onboarding and account setup, increasing modularity and flexibility while enhancing the user experience.
- **KYC Integration:** Integrated ZOLOZ for identity verification with ID recognition and selfie validation, improving compliance and reducing manual verification effort.
- **Secure Storage & Access:** Utilized AWS S3 for encrypted storage of sensitive customer data and implemented modular service workflows to reduce direct API exposure, enhancing system security.
- **Reusable Client Infrastructure:** Created standardized clients for push, email, and SMS notifications, and integrated AWS SNS and SES to ensure 99% timely delivery and consistent messaging.
- **Codebase Standardization:** Established a shared code repository across teams to eliminate duplication and enhance maintainability.
- **Service Design & Deployment:** Followed best practices in service design, documentation, and deployment, maintaining high development standards across teams.
- **Reporting & Task Automation:** Developed a dynamic reporting engine and automated client onboarding tasks, increasing reporting efficiency by 25% and reducing manual workload by 40%.
- **Booking & Notification Systems:** Built appointment scheduling services with rescheduling and real-time notifications, leading to a 20% improvement in user satisfaction.
- **Performance Optimization:** Optimized microservice and API performance using gRPC, RESTful APIs, and container orchestration via Kubernetes, reducing latency by 20% and increasing load handling by 40%.
- **Cross-Team Collaboration:** Partnered with frontend, QA, and product teams to enhance delivery timelines by 15% and ensure robust integration of KYC and messaging services.
- **Code Quality & Maintenance:** Refactored legacy codebases, improving readability by 30%, reducing bugs by 25%, and enhancing performance by 15%. Maintained code quality using golangci-lint and extensive unit testing.
- **Containerization & Workflow Automation:** Developed and maintained Dockerfiles and docker-compose configurations to containerize Golang services, streamline development workflows, and ensure consistent environments across teams.
- **Service Orchestration & Deployment:** Deployed containerized services to Kubernetes clusters for development and testing environments, enabling scalable microservice orchestration and reducing manual deployment effort by 50%.
- **Observability & Monitoring:** Implemented system monitoring dashboards using Grafana and AWS CloudWatch to track key performance metrics, improving observability and reducing incident resolution time by 30%.

Associate Software Engineer, Gophers Lab Technologies

March 2022 - December 2023

- **API Security:** Developed secure REST and gRPC APIs with role-based access control (RBAC) using OAuth 2.0, ensuring compliance with enterprise security standards.
- **Inter-Service Communication:** Integrated gRPC protocols for efficient internal communication and REST APIs for external interfaces, reducing overhead and improving throughput.
- **Database Optimization:** Refactored SQL queries to reduce API response time by 20% for a network automation platform.
- **AWS Resource Automation:** Leveraged AWS SDK to automate resource provisioning, reducing manual effort by

- 20%.
- **Task Queuing System:** Utilized RabbitMQ for asynchronous task handling, increasing task processing efficiency by 25%.
- **HR Systems Integration:** Integrated Zoho People APIs to automate HR workflows, reducing processing time by 20%.
- **Code Quality Assurance:** Maintained high code quality with unit tests, resolving 95% of issues before production.

EDUCATION

Bachelor Of Technology at **Roorkee Institute Of Technology, India** August 2018 - Jun 2022 (Computer Science and Engineering)

SKILLS

Languages:	Golang, Java
Tools and Frameworks:	Gorilla Mux, Goose, Mockery, Gorm, Gin
Tools:	Git, Docker, Kubernetes, Grafana, RabbitMQ
Database:	MySQL, PostgreSQL, Redis
Cloud:	AWS (IAM, EC2, S3, SNS, SES, EKS, ECS, Cloudwatch)
