

PROFILE

Skilled analyst with over 6 years of experience in collecting, organizing, interpreting, and disseminating data through different data analytics and visualization tools. Energetic presenter and confident communicator with the ability to extract insights from complex data sets to drive business decisions.

EMPLOYMENT HISTORY

Lead Data Analyst

Innovaccer • Noida

06/2023 – Present

- Proficient in manipulating and analyzing data to derive actionable insights using DAP ETL Tool.
- Proficient in crafting clear and concise analytical reports tailored for US healthcare clients.
- Skilled in designing and developing interfaces to streamline workflows between data activation platform and client third party systems while adhering to industry standards using PostgreSQL and snowflake.
- Developed and maintained comprehensive data models using Erwin Data Modeler, ensuring data integrity and alignment with business requirements.
- Assisted in building and improving the database design and infrastructure required to support the business portfolio.
- Collaborating with business stakeholders to collect data requirements and creating SQL queries to fulfil their needs.
- Creating impactful dashboards using Power BI, fetching data from different sources to showcase insight to clients.
- Led end to end data migration project, transferring data from PostgreSQL to Snowflake platform.

Sr. Data Analyst

Tata Consultancy Services • Gurgaon

07/2022 – 04/2023

- Collaborated with business stakeholders to collect data requirements and formulated SQL queries to fulfil their needs.
- Designed and implemented scalable ETL solutions for updating data across repositories, data marts and data warehouses.
- Employed various ETL Techniques, including Encryption and Transformation, to execute queries within in ETL Tool.
- Developed impactful dashboards using Power BI and Tableau, extracting data from diverse sources to present insights to clients.

Sr. Data Analyst II

Aon • Gurgaon

12/2018 – 05/2022

- Collaborated with business stakeholders to collect data requirements, compile information, and create and modify reports that meet client needs.
- Utilized ETL tools to export data from various source systems in different formats for data modeling, mapping, migration, and reporting.
- Managed client data feed activities, including updating data mapping and providing realistic projections and scenarios for viable process strategies.
- Conducted large scale data analysis to identify and resolve quality issues and provided reports of corrective actions to the leadership team.
- Designed and built statistical analysis model on large datasets to provide insights and improve business processes.
- Collaborated with stakeholders and PMOs to align on approaches that cater to their requirements, working with multiple clients across different industries.

EXPERIENCE

PROJECT (INNOVACCER):

US Healthcare (Dayton, Mercy, Cmics, Arkansas, Orlando)

In my current role, I'm responsible for developing and maintaining a scalable data pipelines within the organization for different workflows and for different clients, proficient in ingesting multiple large datasets, including both structured and unstructured data. I adeptly utilize HL7, CCD, and JSON parsing techniques to meet data processing requirements. I'm good at using Python tools, SQL functions, and AWS scripts, and I made sure they worked smoothly with GitHub. I've also dealt with keeping data organized and safe, making sure it follows privacy rules. I've worked with healthcare standards like FHIR and OMOP to make sure different systems can work together better.

I also analyze extensive datasets to uncover trends, patterns, and valuable insights. Whenever data-related system issues arise, I conduct root-cause analyses and suggest or implement corrective actions. To maintain data accuracy and reliability, I perform thorough end-to-end data validations and generate comprehensive Data Quality reports before data ingestion. I specialize in designing and developing workflows and data pipelines, utilizing various nodes to efficiently acquire, clean, process, and ingest data into databases. My expertise spans managing raw data, transforming it across different layers, and preparing it for reporting and analytics purposes. I oversee end-to-end Data Migrations from PostgreSQL to Snowflake database for multiple projects, ensuring seamless coordination with product teams and adherence to defined timelines. Additionally, I create visually appealing dashboards, customize reports, and implement business intelligence solutions to present data effectively. Providing technical support, I troubleshoot analytics and reporting issues, promptly resolving incident tickets, bug fixes, and enhancing dashboards. Furthermore, I update and develop scripts and queries to extract and analyze data from various sources, conducting Quality, Claims, and Risk assessments to derive meaningful insights.

PROJECT (TCS):

CITI Bank

In my current role, I am responsible for managing international clients. I create specific SQL queries based on their needs, which I then execute in Teradata Studio. We use ETL Tool to run various jobs that generate ISX files for each job. This enables us to migrate the data to the PAT environment and schedule the jobs using Tectia Tool. Afterward, we generate compare reports to ensure that the output is 100% accurate. Based on the results, we create different visualization reports to present the data to the respective countries.

PROJECT (AON):**Total Benefit Solutions (Goldman Sachs, HSBC, RBS, Starbucks, HP, Dell etc)**

Flex is a UK project which involves exporting of data from SQL Server through Pervasive, creating maps, exporting the data and filtering it with SQL and ETL Tools.

Exports like Healthcare Files, Benefit Solution Exports and Claims Files in different formats and monthly election reports.

Domain: Global Health and benefits.

Clients: UK Banking and Insurance.

EDUCATION**BTECH(CSE) 2014 - 2018**

K.R. MANGALAM UNIVERSITY • Gurgaon

SKILLS

- Proficient in SQL, RDBMS, ETL processes, and DWH design principles.
- Experience with PostgreSQL/Snowflake and AWS data stores such as S3 and RedShift.
- Expertise in writing complex SQL queries and conducting data correlation analysis with spreadsheets and database query results.
- Experienced in utilizing Talend, an open-source ETL tool.
- Familiarity with programming languages such as Python.
- Knowledge of the Linux environment for job deployment and scheduling.
- Exposure to ETL testing and ability to write effective test cases.
- Familiarity with Tableau and Power BI visualization tools for data presentation.
- Excellent Excel skills for basic data analysis and testing.
- Strong technical documentation and communication skills for effective collaboration with cross-functional teams.
- Knowledge of data modeling techniques and tools(Erwin).
- I possess expertise in utilizing the following tools (Dbeaver, Excel, Jira, Service now).
