Location: Bangalore

Professional Summary

Experienced and passionate QA automation professional with a strong focus on building high-quality software testing strategies and automation frameworks. Skilled in working on complex integration projects, designing scalable frameworks, and applying agile QA methodologies in real-world product environments. Proficient in multiple programming languages, DevOps tools, and modern test technologies, with a commitment to hands-on execution and continuous improvement.

Work Experience

Principal Engineer

from 2021

Oracle India Pvt Ltd, Bangalore

- Contributed to QA scope planning, task prioritization, issue escalation handling, and maintained effective communication with customers and stakeholders.
 - Applied QA strategy skills across large-scale complex projects involving multi-solution integrations.
 - Supported organizational initiatives by driving innovation, improving efficiency, and promoting a culture of continuous improvement.
 - Provided technical guidance to QA team members, reviewed test deliverables, encouraged collaboration, and helped uplift quality practices.
 - Designed robust, reusable, and modular automation frameworks while staying aligned with the latest trends and best practices in the test automation domain.
 - Demonstrated strong hands-on proficiency in agile testing methodologies and parallel test execution, significantly enhancing test throughput.
 - Utilized practical programming expertise in Java, Python, Selenium, JavaScript, and Cypress to develop end-to-end test automation scripts.
 - Worked extensively with tools like Git, Jenkins, Maven, TestNG, BDD, and Linux for efficient and version-controlled test automation.
 - Integrated and optimized automation workflows using DevOps tools such as CI/CD pipelines, Docker, GitHub Actions, Kubernetes, Ansible, and Terraform.
 - Delivered both visual test automation and API-level testing to ensure comprehensive and layered test coverage.
 - Defined and implemented automation test strategies across multiple product lines, including AEM Sites, Forms, and Assets.
 - Handled defect triaging and test case management using Zephyr, while applying knowledge across functional, regression, and exploratory testing.
 - Collaborated effectively within agile, cross-functional teams, demonstrating strong communication, analytical thinking, and problem-solving abilities.
 - Used JIRA and Confluence for tracking, documenting, and communicating test progress and project status.
-

Senior Lead

2018 – 2021

GlobalLogic India Pvt Ltd, Bangalore

- Analyzed requirements, specifications, and technical design documents, offering timely feedback to improve software quality.
- Contributed to the development and maintenance of comprehensive quality assurance policies and procedures aligned with industry standards.
- Participated in the design and implementation of testing strategies for software products, creating test methodologies, plans, and test cases, and executing them to analyze results.
- Supported QA team operations through peer collaboration, technical discussions, and informal mentoring, ensuring consistent alignment with project quality goals.
- Collaborated cross-functionally with product management, development, and customer support teams to integrate quality considerations into the product lifecycle.
- Designed and built scalable automated test frameworks and suites using JavaScript, Python, and Appium, covering multiple technologies to achieve comprehensive test coverage.
- Executed and debugged automated test scripts, analyzed test logs, and generated detailed test reports to identify and document product issues.
- Performed manual validation of product functionalities to complement automation efforts and ensure consistent software behavior.
- Actively participated in continuous improvement efforts by identifying gaps, proposing enhancements, and contributing to QA process optimizations.
- Evaluated product quality risks, helped prioritize testing efforts, and worked with cross-functional teams to mitigate potential quality concerns.
- Brought technical expertise into cross-team discussions, promoting collaboration, communication, and shared ownership of quality improvements.

Senior Consultant

2012 - 2017

Unisys India Private Limited, Bangalore

- Developed and maintained comprehensive quality assurance policies and procedures to ensure compliance with industry standards and regulations.
- Led the design and implementation of testing strategies for software products, creating test methodologies, plans, cases, and executing tests to analyze results.
- Managed and coached a team of QA professionals, providing guidance, mentoring, training, and evaluating performance to ensure efficient team operation.
- Collaborated cross-functionally with product management, development, and customer support teams, integrating quality considerations into the product development process.
- Designed and built scalable automated test frameworks and suites using JavaScript and Python and Appium, covering various technologies, and achieving comprehensive test coverage.
- Executed and debugged automated test scripts, analyzed test logs, and generated detailed test reports to identify and document issues.
- Conducted manual testing to validate product functionalities and prepare for automated testing efforts, ensuring consistent software quality.
- Played a key role in continuous improvement initiatives, identifying enhancement opportunities, and implementing process improvements to elevate quality assurance practices.
- Managed risks related to product quality by assessing impact, prioritizing testing efforts, and collaborating with cross-functional teams to mitigate potential issues.
- Contributed technical expertise to interdisciplinary teams, fostering collaboration, effective communication, and knowledge sharing to drive quality improvements.

Senior Software Engineer
Thomson Reuters, Bangalore

2009 - 2012

- Proficiently utilized object-oriented programming languages such as Java and Python to develop and execute test automation for functional and integration validation.
- Applied expertise in building comprehensive test frameworks and methodologies, ensuring robustness and reliability in software releases.
- Executed and maintained various tests, including unit, integration, and system-level tests, adhering to industry best practices.
- Employed tools like Selenium, TestNG, and Rest Assured to validate REST API functionalities, improving product quality and coverage.
- Applied computer science fundamentals, including design patterns, algorithms, and data structures, to enhance automation effectiveness and maintainability.
- Worked closely with cross-functional teams—Product Design, Program Management, and Feature Development—to define clear testable requirements and edge cases.
- Developed and maintained regression test suites, identifying recurring issues and enhancing stability through early detection.
- Possess a strong understanding of QA methodologies and contributed actively to test case design, scenario validation, and test plan execution.
- Demonstrated strong analytical and communication skills, collaborating with teams to resolve defects and share testing insights.
- Hands-on experience in web and mobile application testing, leveraging Selenium WebDriverIO and Selenium WebDriver for cross-platform automation.
- Utilized GitHub for version control and JIRA for test case tracking, defect logging, and project coordination.
- Diagnosed and debugged complex test failures and product defects, providing detailed analysis that enabled quick resolution and better QA turnaround.
- Actively contributed to improvements in test processes and release workflows, resulting in more efficient delivery pipelines and higher release quality.

Software Engineer

2008 - 2009

Thomson Holding India private Ltd (Technicolor SA Subsidiary), Bangalore

- Designed and executed comprehensive test plans and test cases aligned with various development methodologies to ensure robust software quality.
- Contributed to the development and testing of multi-tier web applications, focusing on architecture-level validation and deployment strategies to enhance user experience.
- Applied industry-standard QA best practices and methodologies to implement and automate efficient and reliable testing workflows.
- Leveraged a metrics-driven testing approach and feedback loops to improve release quality, enhance deliverable consistency, and reduce test gaps.
- Communicated and documented tested features, bugs, and observations clearly and effectively using strong written and verbal communication skills.
- Collaborated with development and QA teams to design and implement automation frameworks for RESTful API validation, improving test coverage and regression detection.
- Researched emerging testing tools, frameworks, and methodologies to continuously improve automation systems and stay current with industry advancements.

Education

Bachelors - B.Tech, BPUT University

Skills

- **Programming Languages:** Java, Python, PHP
- **Cloud Platforms:** AWS, OCI.
- **Frameworks and Tools:** Spring Framework, Redis, Apache Kafka, SOAP & Restful Web Services, Splunk, Kibana, Elastic Search, Junit, Mockito, TestNG, Rest Assured, Selenium, Cucumber, Appium, Cypress, Playwright, Log4j, JMS, Microservices and SaaS architecture.
- **Databases:** Oracle, MySQL, MongoDB, Cassandra.
- **Source Code systems:** Git, Jenkins, CI/CD pipelines, Kubernetes, Docker, ClearCase, SVN.
- **Automation /Performance tools:** JMeter, TestNG, Report NG.
- **Web technologies:** Angular, HTML, CSS, JavaScript.
- **Build Tools:** Ant, Maven
- **Backend Servers:** Tomcat, Apache Web Server, WebLogic, Jboss.
- **IDE's:** IntelliJ, Eclipse, WAS.
- **OS:** Unix, Linux, and Windows.
- **Software Development methodology:** Agile, Scrum, Kanban.
- **System Design:** HLD, LLD, Design Principles, Design Patterns, UML, POC's.
