Professional Summary

AI/ML Developer with 3.5 years of experience, including a strong foundation in research and development during the early stage of my career. Skilled in applying NLP, machine learning, and deep learning to build scalable, real-world AI solutions. Passionate about transforming advanced concepts into intuitive tools that solve practical problems and deliver measurable impact.

Experience

MSRCosmos LLC | Hyderabad ,Telangana
Software Engineer | 10/2023 - Present

□ Digital Library Chatbot

AI-powered chatbot providing fast, intuitive access to millions of documents stored in Azure Blob Storage using **Retrieval-Augmented Generation (RAG)**.

- Built Agentic **RAG** pipeline with Qdrant for scalable, accurate document retrieval.
- Used **AutoGen** for intelligent query rewriting, improving search relevance and intermediate Automation. • Integrated Guardrail agent to ensure safe, controlled, and dealing hallucination from **LLM** responses.
- Leveraged **GPT-3/GPT-4** for generating context-aware, high-quality outputs. • Connected to Azure Blob Storage for efficient document access and retrieval.

Tech Stack: OpenAI (GPT-3/4), Agentic RAG, Qdrant, AutoGen, Azure Blob Storage, Python, Azure App Services

□ Recruiter Bot

An AI-driven recruitment assistant built to streamline candidate sourcing by matching job requirements with qualified candidates using natural language inputs.

- Implemented **RAG** architecture with vector search to retrieve and rank relevant candidate profiles.
- Initially deployed using Pinecone, later migrated to Qdrant for improved performance and flexibility.
- Hosted open-source **LLMs** like LLaMA2-13B and Mistral-7B on a self-managed infrastructure configured with GPU to ensure data privacy and cost-efficiency.
- Enabled recruiters to input natural queries (e.g., *"I need a Python developer with 3 years of experience"*) and receive highly relevant candidate matches instantly.

Tech Stack: LLaMA2-13B, Mistral-7B, Qdrant, RAG, Azure, Python

Zensar Technologies | Telangana, Hyderabad
Software Engineer | 03/2022 - 07/2023

□ VISCA – E-commerce Product Recommendation System

Developed an AI-based product recommendation system that retrieves visually similar clothing items and summarizes their reviews.

- Generated image embeddings using pre-trained models like ResNet and VGG-16; stored embeddings in Pinecone for scalable vector search.
- Implemented a RAG pipeline to retrieve relevant products based on a user-uploaded image and generate concise review summaries.

- Applied clustering techniques such as KNN and ANN for efficient nearest-neighbor retrieval.

▣ **SynData Generation – Synthetic Tabular Data for Banking**

Built a synthetic data generation pipeline tailored for banking datasets using GANs.

- Applied data preprocessing and trained Conditional GAN (CTGAN) models to generate realistic tabular data while preserving privacy.
- Integrated user-defined constraints via API and dynamically injected them into the data generation process.

Skills

Python, Machine Learning, Deeplearning, Autogen, Langchain, RAG, Pytorch

Education

Aditya Institute Of Technology And Management | Tekkali, Srikakulam

Bachelor of Technology | Mechanical Engineering | 11/2020

Certificates

Data science with python | Sudiksha Analytics, Hyderabad

Microsoft Certified: Azure AI Engineer Associate (AI-102)

Microsoft Certified: Azure AI Fundamentals (AI-900)

Awards

Finalist in RPG innovation Festival-2022- Syndata Generation
