Pune, India 412207

SUMMARY

- Principal Software Engineer with 12 years of hands-on experience in crafting Java and Microservice architecture-based applications.
- Accomplished Engineering Manager with a proven track record of successfully leading teams to deliver high-quality software solutions.
- Specialized expertise in designing and implementing high-performance, highly available, scalable, secure, multithreaded, heterogeneous, and multi-tiered distributed systems.
- Possesses a mathematical background that enhances analytical capabilities.
- Demonstrates proficiency in developing efficient strategic roadmaps for software projects.
- Skilled in training developers and providing valuable assistance in their professional development.
- Solid understanding and practical application of cloud computing principles.
- Proficient in OO Methodology, Analysis/Design Principles, Design Patterns, and Algorithms.
- Successfully designed and implemented a new software architecture aligned with business goals, resulting in a notable 30% performance increase and a 15% reduction in costs.

SKILLS

- | | |
|------------------------|--|
| ● Java | ● ArgoCD |
| ● Sprint Boot | ● Grafana |
| ● Kotlin | ● Loki |
| ● Microservices | ● Terraform |
| ● Restful Web Services | ● AWS |
| ● Kafka and RabbitMQ | ● GCP |
| ● Hazelcast and Redis | ● Gradle/Maven |
| ● Docker | ● Krakend Api Gateway |
| ● Kubernetes | ● Restful Web Services |
| ● Helm | ● Relational and Non-relational Databases like Postgres, Oracle, Mongo, Dynamodb |

EXPERIENCE

Principal Software Engineer

Saras Analytics | Hyderabad | Dec 2021-Current

- Spearheaded the architecture and development of REST services and scalable data pipelines for Daton, resulting in 50 percent acceleration of data processing.
- Revamped connectors resulting in a 50% reduction in infrastructure resource costs.
- Oversaw critical infrastructure projects, leading the successful migration to a Kubernetes environment
- Supervised multiple microservices, ensuring seamless integration and optimal performance within the infrastructure
- Individually designed, developed, and owned various services for Daton, including Subscriptions, Notifications, Rate Limit Manager, webhooks, User-Service, Source-Service, and Warehouse Service
- Engineered and deployed multi-threaded, distributed microservices and frameworks for the backend platform

- Conducted interviews, facilitated onboarding, and provided mentorship to new team members and interns.

Software Architect

Denario | Oct 2020-Nov 2021

- Engaged with stakeholders to comprehend business initiatives, establish roadmaps, and define software requirements for project success
- Contributed significantly by personally developing approximately 70% of the product's codebase
- Implemented rigorous unit and integration testing protocols, achieving an impressive 90% test code coverage
- Took charge of backend architecture development to ensure a robust and scalable foundation
- Provided supervision to development teams, ensuring the delivery of error-free code and designs within specified timelines
- Spearheaded the implementation of various AWS solutions, including Elastic Container Service, Code Pipeline, Code Build, IAM, Cognito, Lambda, DynamoDB, Load Balancers, AutoScaling, CloudWatch, S3, and RDS
- Established comprehensive CI/CD pipelines to support efficient software development and deployment processes.

Senior Software Developer

Medscheme | Mar 2019-Oct 2020

- Led an 8-member team in developing a Personal Health Record (PHR)
- Implemented token-based Spring Security and leveraged AWS solutions, including Elastic Container Service, Code Pipeline, Code Build, IAM, Cognito, Lambda, DynamoDB, CloudWatch, New Relic, Elastic Beanstalk, S3, and RDS
- Integrated Redis Cache seamlessly with the PHR application
- Designed and implemented Microservices using Spring Boot, adopting a distinct schema for each microservice in the database.

Senior Software Engineer

Ion Group | Jan 2018-Mar 2019

- Contributed to the development of Profit/Loss analysis for all commodity trades, encompassing both Physical and Financial transactions
- Automated the customer upgrade process from older versions to the latest one, streamlining the transition
- Engaged in the NVE (New Valuation Engine) project at Triple Point technology, orchestrating End of Day valuation for approximately 1 million trades in just 15 minutes
- Utilized Hazelcast in-memory data grid and implemented multithreading for enhanced efficiency.

Java Developer

Nihilent Technologies | Sep 2015-Oct 2017

- Created and utilized resources through Spring with REST
- Implemented the integration of ehcache within the application
- Employed Hibernate named queries, criteria language, and SQL for data operations
- Developed business components, configured them as beans using Spring Dependency Injection (DI).

Software Analyst

C-edge Technologies | Jan 2013-Aug 2015

- Drafting UI/Business validations for owned use cases
- Executing Business logic implementation
- Crafting Hibernate Configuration files tailored for Oracle.

EDUCATION AND TRAINING

M.Tech: Computer Science

Wadia College | Pune | June 2013
