TECHNICAL SKILLS

Languages: Kotlin, Java

Android: Jetpack Compose, MVVM, Coroutines, Retrofit, Room DB, Navigation, Deep Linking, Foreground Services

Tools/Platforms: Android Studio, Gradle, Git, MQTT, Google Play Services

ML Integration: On-device classification, LLM-assisted backend processing

Security: Identx, AppGuard SDKs, Permission handling (Accessibility, Overlay, Usage Stats, Screen Recording)

EXPERIENCE

Mobile Premier League (MPL) – Monkey Play

Bangalore, India

Founding Engineer / SDE-1 (Android)

July 2023 – Present

- Founding member and only Android engineer in a 0→1 project **Monkey Play**, scaled to **15k+ installs within 14 days of launch (Aug 2025)**.
- Optimized performance with a **single-activity Jetpack Compose + MVVM** architecture, ensuring minimal CPU/memory usage.
- Designed **screen recording with real-time model classification**, enabling ML-based gameplay detection.
- Built an asynchronous pipeline: Foreground service captured periodic screenshots → client-side classification → relevant images stored in **Room DB** → uploaded to backend for **LLM-based extraction** → results returned via **MQTT**.
- Developed complete **referral flow**, contributing to 2% of total user acquisition and enhancing marketing analytics.
- Integrated fraud prevention/security SDKs (**Identx, AppGuard**) to ensure fair gameplay on third-party apps.
- Implemented **in-app updates** (Immediate & Flexible) with Google Play APIs.
- Created wrapper for **Rive animations**, introducing dynamic UI/UX improvements.
- Managed multiple **foreground/background services** leveraging key permissions: Accessibility, Overlay, Usage Stats, Screen Recording.
- Used **custom Compose views** to show UI and animations outside the application.
- Created a **floating bubble control point** that enabled users to trigger functions outside the app, including API calls and UI state management.

UrbanMatrix Technologies

Bangalore, India

Android Developer Intern

Aug 2022 – Jan 2023

- Developed an **RTSP streaming library** enabling live streaming to Android devices, previously unsupported in LaunchPad.
- Created a **Mavlink Coroutines Library** using KotlinPoet to generate builder functions, officially approved by JetBrains Open Source Support.
- **UrbanMatrix LaunchPad (Drone GCS App)**: Migrated entire codebase from XML to **Jetpack Compose** and developed **Terrain-Following** (paid feature) using AirMap API.
- GitHub: [mavlink-kotlin](#)

Guess the Poke Quiz

Remote / Indie Project

Android Developer Intern

Jan 2022 – Jul 2022

- Developed a Pokemon trivia game using **MVVM architecture, Hilt & Dagger**.
- Implemented **Google Rewarded Video Ads** and **Google Sign-In**.
- Fixed bugs, optimized performance, and improved user experience.

EDUCATION

GGSIPU

Delhi, India

B.Tech in Information Technology (9.0 GPA)

2019 – 2023
