Kozhikode, Kerala

Summary

- Full Stack Developer with **6 years of experience** building robust and scalable applications using React.js and Node.js
- Experienced in working with frameworks such as **React JS, Nest.js, Loopback JS, Polymer JS, and Next.js**
- Well-versed in diverse databases including **MongoDB, MySQL, SQL, and PostgreSQL**
- Adept at utilizing ORMs like **Sequelize and TypeORM** to streamline database operations.
- Possess in-depth knowledge of cloud infrastructure management, like **Argo CD with Charts, Managed Identities, KeyVaults, VM deployment, and orchestration** with handling CI activities.
- Skilled in containerization using **Kubernetes and Docker**. Proficient in **AWS Amplify and Azure Data Factory** for efficient application deployment and data integration.
- Experience working with **Apache Kafka**. I successfully designed and implemented an industrial-grade Kafka cluster for the organization, overseeing the configuration of topics, partitions, and **producers/consumers** to ensure efficient communication between microservices.
- Involved in configuring **Kafka connectors**, handling data transformations, and ensuring seamless connectivity in the overall data ecosystem.
- Created **Kafka plugins and stream applications** in Java to transform, stream, and load the events to desired topics
- Demonstrated proficiency in implementing queuing with **Redis and Azure storage queue**
- Led the development of an open-source alternative to Docker Desktop, delivering a cost-effective solution that saving the organization over **\$8,000 per month**. This achievement highlights my commitment to practical, budget-conscious solutions that enhance workflow efficiency.
- Implemented an **automation solution to streamline Kafka topic creation**, reducing manual workload and ensuring consistent and error-resistant processes. This initiative reflects my commitment to optimizing workflows and enhancing the reliability of the Kafka environment.
- Proficient in handling **security, authentication, and authorization**, implemented a comprehensive system adhering to various security standards throughout the applications.
- Established an identity provider solution featuring **JWT token mechanisms**. Strengthened security through **token rotation** and incorporated support for **multi-platform sign-in and remote logout**.
- Implemented both **symmetric and asymmetric authentication** for an on-premises application, enhancing the performance of asymmetric authentication cryptographic algorithms through the strategic integration of asymmetric-symmetric authentication.
- Implemented **Change Data Capture (CDC) using Debezium**, Apache Kafka, and Kafka Connect in conjunction with multiple stream applications, enhancing real-time data integration capabilities.
- Created a Debezium connector for a legacy database called Pervasive SQL, reading transactional logs.
- Created various application variants like **web applications, chrome extensions, desktop, and electron applications**.
- Worked on analytical products such as **AWS Pinpoint, Azure App Insights, and Azure Data Explorer** to delve into data exploration.

Experience

Staff Software Engineer

CareStack · Infopark, Ernakulam

12/2021 – Present

Engaged as a Full Stack Developer, I contributed to the development of robust applications using **React.js and Node.js**. Proficient in various frameworks and databases, showcased expertise in cloud infrastructure management, CI activities, and containerization with **Kubernetes and Docker**. Specializing in **Apache Kafka**, I played a key role in developing industrial-grade clusters and stream applications. Additionally, I led the creation of an open-source Docker Desktop alternative, emphasizing cost-effective solutions. Implemented automation for Kafka topic creation to work as CI.

Established comprehensive systems for security, authentication, and authorization, including identity provider solutions with **JWT mechanisms and symmetric/asymmetric authentication**.

Software Specialist

Acsia Technologies · Technopark, Trivandrum

10/2020 – 12/2021

Engaged as a Full-Stack developer in diverse analytics and AI-enabled web applications, contributing to projects involving **React, Node, Spacy NLP, Python, AWS, Amplify, Flask, SQL Alchemy, GraphQL**, and **Postgres**. Operating within a dynamic CI/CD environment with rigorous version control, I assume responsibility for product ownership. Notably, I've developed both serverless and server-side applications. The meticulous implementation of version control and streamlined build automation ensures efficiency in our CI/CD processes.

Research and Development Engineer

Flytxt · Technopark, Trivandrum

07/2018 – 10/2020

Contributed as a Research and Development Engineer at Flytxt, actively involved in advancing the capabilities of NEONDX, the company's real-time decision-making and marketing automation product. Worked extensively on Features involving Polymer.js, React.js, Node.js, and AWS Cloud contributing to the development and deployment of innovative solutions.

Skills

React.js, Node.js, Nest.js, Next.js, Loopback JS, Polymer JS, TypeORM, Sequelize, Azure, AWS, Cloud Infrastructure Management, Argo CD, CI/CD, Managed Identities, KeyVaults, Kubernetes, Docker, AWS Amplify, Azure Data Factory, Apache Kafka, Kafka Connect, Stream Applications, Authorization/Authentication, Redis, Azure Synapse Analytics, AWS PinPoint

Education

B. Tech in Computer Science

TKM College of Engineering · Kollam, Kollam

07/2018

Graduated with a distinction with active contribution to College activities by easing the hassles with the help of tech.

Higher secondary

St. Joseph Boy's Higher Secondary School · Kozhikode, Kerala

03/2013

Higher secondary education with 91% of the aggregate.

Secondary Education

St. Joseph Boy's Higher Secondary School · Kozhikode, Kerala

03/2011

Secondary education with 98% as aggregate.

Projects

Bug Capture Chrome Extension – React JS | Nest JS

Developed a Chrome Extension for bug capture, leveraging React JS and Nest JS. Streamlines bug reporting by capturing and recording crucial information, including system details, memory usage, internet speed, network calls, and cache cookies. Enhances issue resolution and software quality.

Course Marketplace – React JS | AWS Amplify

Developed a comprehensive course marketplace enabling students to purchase technical courses. Implemented a programming engine to evaluate code, run test cases, and track performance. Incorporated a robust notification engine for analyzing behaviors and scenarios.

Recruit Pro – React JS | AWS Amplify | Python

Spearheaded the creation of an intelligent hiring platform facilitating recruiters in identifying candidates with desired technical and personality skills. Dynamically generated tests with varying attributes and weights to streamline the recruitment process.

Fluffschoool Pet AI - React JS, Nest JS | Open API

Developed Fluffschoool Pet AI, utilizing React JS for the front end, Nest JS for the backend, and Open API for analytic services. The application employs a questionnaire with 25 questions to map users' personalities to the 16 personality types. Utilizing this mapping, the system recommends the exact type of pet a user can accommodate.

Anonymouse Chat Application - Next JS | Redis | MongoDB

Led the development of "Anonymouse," a chat application built with Next JS. Implemented Redis cache for efficient queuing of chat requests, optimizing real-time communication. Leveraged MongoDB as the primary database, ensuring robust storage and retrieval of chat data.

Panic Geo Location Trace - React Native | AWS Amplify | Firebase | GeoHash

Engineered an innovative geo-location-based panic alert system with advanced nearby search algorithms. Notified nearby officials through voice/text alerts during the panic mode, enhancing safety measures.

Quest-Form Gamification - React | Python | AWS

Designed and implemented a gamified form builder and publisher to engage users in form-filling activities, providing marketers with valuable insights.

Resume Tinder - React JS | Python | AWS | Spacy NLP

Developed a cutting-edge resume-matching application leveraging Spacy NLP to extract soft and professional skills. Implemented a scoring system for matching skills with job descriptions, enhancing the recruitment process.

Receptionist 2.0 - React Native | Amplify | AWS

Engineered a versatile receptionist application for service providers, streamlining the appointment booking process. Users can directly schedule appointments, and service providers receive real-time notifications for efficient appointment management.

CIRCLES - Flutter | Dart

Contributed to the development of "CIRCLES," an online social networking application/platform tailored for closed domains and in-house installations.

E-lawyer - React JS | Python | AWS | Spacy NLP

Led the parsing and processing of the Indian Penal Code, creating a readable document. Trained a statistical model to fetch precise penal codes based on specific queries, enhancing legal research efficiency.
