

VISHWANATHREDDY M

Devops Engineer
(IMMEDIATE JOINER)

+91 9739940605

github.com/Vishwanath760970

TOOLS & TECHNOLOGIES

Version Control: Github, Git, GitLab
Container tools: Docker & Kubernetes
Infrastructure management:
Terraform, Ansible, Helm charts
Cloud Platform: **AWS with the following services**:

- EC2, IAM, Security groups
- Route 53, DNS, S3 buckets, SNS
- Amazon Cloudwatch
- EKS, ECR, RDS, Load balancers
- Auto scaling groups
- VPC, Subnets, gateways

CI/CD Tools: Jenkins, GitOps with Gitlab
Web server: Apache Tomcat
Build tool: Maven
Code analysis: Sonarqube, SonarCloud
IDE: Visual Studio Code
Scripting: Python scripting
Monitoring tools: Grafana & Prometheus
Project management tools: Jira, Confluence, Agile & Scrum

CONTACT

Bangalore, Karnataka, India

EDUCATION

B.E in Information Science & Engineering
from Vemana Institute of Technology,
Bangalore. Graduated in 2018.

LANGUAGES KNOWN

English, Kannada, Telugu and Hindi

QUALIFICATION SUMMARY

An IT professional with **6.2 years of overall experience**, with **3.2 years as a DevOps engineer** and **3 years as a front-end developer**, with expertise in **CI/CD pipelines**, managing cloud infrastructure (AWS), and optimizing deployments. Proficient in containerization, monitoring, and configuration management tools. Known for improving system reliability, reducing deployment time, and collaborating across teams to deliver scalable solutions.

WORK EXPERIENCE

Software Engineer II

NCR Voyix | SEP 2023 - MAY 2025

- Worked for 1.8 years as a Software Engineer and was involved in Designing CI/CD pipelines with **Gitops and Gitlab** for Enterprise level web applications.
- Involved in configuring several AWS services for the project like **IAM roles, EC2 instance for gitlab runner pipeline, VPC, Subnets, Load Balancer** using IaC tool Terraform scripts.
- Updating existing **Terraform scripts** to add/update AWS resources.
- Integrating **SonarCloud** quality gates with Gitlab pipeline for code quality check.
- Worked on creating **Docker images** for containers.
- Worked with **Helm charts** for maintaining the **EKS (Amazon Elastic Kubernetes Service)** cluster on AWS.
- Set up monitoring using **Prometheus and Grafana**, thereby boosting system reliability and minimizing downtime with the Kube-Prometheus stack tool.
- **Amazon Cloudwatch** alarms and logs for monitoring AWS resources.
- Handled day-to-day **ad hoc requests**.
- Collaborated with **cross-functional teams** to optimize workflows, resolve critical issues, and minimize downtime effectively.
- Also worked on **front end development** tasks using **React.js** library and JavaScript ES7+.
- My front-end tasks were focused on **bug fixes** and developing new UI.
- Worked on **Unit testing** for the React component code using the React testing library library to improve code coverage for Quality gates passing.

Software Developer

Teksystems with Hewlett Packard (HP) client | AUG 2021 - AUG 2023

- Worked as a Software developer for 2 years, on an enterprise-level web application which belongs to the e-commerce domain, involved in designing CI/CD pipelines and feature development.
- Worked on setting up **Jenkins CI/CD pipelines** by writing Jenkins file with various stages for building, testing, and deploying the code.
- Integrated **Slack** with Jenkins for **build notifications**.
- Created **AWS EC2 instances to set up Jenkins server**, and configured **security groups** with appropriate inbound and outbound traffic rules and relevant **key pairs**.
- Configured **Nexus Sonatype** to store code artifacts and for **Maven** to download its dependencies.
- Set up the stage in the Jenkins file to build **Docker images** and push them to **AWS ECR (Elastic Container Registry)** by integrating the Docker plugin in the Jenkins server.
- Set up **AWS CloudWatch alarms** for cost tracking for some **AWS resources** and also to notify resource utilisation of EC2 instances, like CPU utilisation, after crossing a certain threshold.
- Developed reusable functional **React components**, enhanced existing application features, and also maintained the application by **fixing bugs**.
- **Worked in client-facing roles** on requirement discussion, about functional and design aspects of the application.
- Created application documentations on Confluence and POCs for internal team brain storming.

Software Engineer

MFX Infotech Pvt Ltd | MAR 2019 - JULY 2021

- Worked for 2.6 years as a Software Engineer who was involved in SDLC processes using **Agile and Scrum methodologies**.
- The **project** I worked on was an enterprise-level web application that offered **insurance domain-based services**.
- I was responsible for **developing new features** with reusable and functional React components, enhancing existing application features, and maintaining the application by **fixing bugs**.
- Worked on developing the UI components using React with JavaScript and styling them using the **Bootstrap** library.
- Developed React component **features to drag and drop files**, which were uploaded to **AWS S3 buckets**, search functionality, and data tables.
- Worked on Unit testing for the React component code using the **Jest & Enzyme unit testing** library to improve code coverage.

OPEN SOURCE CONTRIBUTION:

Codebooker (June - 2023).

Description:

This is a book recommendation app created with React 18.2 and MUI.

It is a bookstore eCommerce application.

It is targeted specifically for coders/programmers that are looking for recommendations for programming/coding books to read.

It allows users to organize, recommend and review any book on coding or programming.

Packages used: React js, MUI, axios, react-simple-star-rating,

Roles & Responsibilities:

Worked on developing new user features and also resolving bugs, by **collaborating with developers** in the **US** and **across the globe** via GitHub and Discord.

Github link: <https://github.com/Vishwanath760970/codebooker>

PERSONAL PROJECTS:

Billing Application (POS) (May - 2022):

Description: It is an application used for managing billing system in stores, where the user can add customers, products and generate bills, manage their total sales and profits. Its built using React and state management is done using Redux.

Packages used: Redux, React-redux, Bootstrap, react-select

Github link: <https://github.com/vishwanatha-reddy/billing-application-POS>

Movies Reviewer (August - 2022):

Description: It is an application used for entering movie details and sort them based on their ratings, and names, built using React js and whose state is managed through Redux.

Packages used: Redux, React-redux, Bootstrap, lodash, uuid.

Github link: <https://github.com/vishwanatha-reddy/movie-reviewer>
