[LinkedIn:: /vishwas-singla-679445141](https://www.linkedin.com/in/vishwas-singla-679445141)

Results-driven Senior Software Engineer with 5 years of expertise in architecting scalable systems, APIs, and algorithms. Dedicated to optimizing technology for business efficiency and solving complex challenges. Seeking to leverage skills in contributing to organizational growth and innovation.

Experience

MakeMyTrip

Senior Software Engineer-2/Jan 2024-Now

(Java, Rest Api's, Kafka, LLD, Mockito)

- Redesigned the architecture of the core orchestrator component using **Java 21**, enhancing modularity, speed, and ease of development and maintenance while reducing runtime failures and boot up time.
- Developed comprehensive **JUnit** tests using **Mockito** framework and **Automation** scripts covering all major use cases to mitigate exceptions and edge case failures during runtime.
- Implemented a Kafka pipeline for comprehensive data and metric logging for hotel traffic.
- Implemented a **subscription model** aimed contributed to a **15% increase** in booking conversion rates.
- Facilitated the **migration of Q2T** from legacy GoIbibo APIs to affiliate APIs, reducing latency, increasing throughput, and scaling its request handling capacity by **10 times**.

MakeMyTrip

Senior Software Engineer-1/Sep 2021-Dec 2023

(Java, Spring-Boot, Rest Api's, Redis, Aerospike, Kafka, GRPC)

- Built a comprehensive **affiliate program** from scratch, developing core APIs for Hotels Listing, Details, Review, and Checkout flows for seamless booking flow resulting in **1,00,000 room nights or 60k bookings per month**.
- Developed a REST based client gateway for affiliates like **AMAZON, HDFC, HAPPAY, IRCTC** etc. resulted in **30 % traffic increases** handling **500 requests per second**.
- Migrated Downstream Api's from Rest to **GRPC** leading to **40% reduction in response time**.
- Integrated **Consul** and **Secret Manager** to decouple code from configurations and secrets, enabling faster feature deployment, quicker resolution of runtime issues and secure handling of encryption and API keys during runtime
- Implemented a **Buy Now, Pay Later** feature for the MyPartner platform, **increasing room nights by 40%**
- Implemented data pipeline using **Redis** and **Aerospike** for efficient and robust flow of Booking, Payment, and filters resulting in improved system performance and faster processing.
- Developed **Persuasion Engine and Card Engine** for driving generic persuasions and card data on the funnel, enhancing user engagement and conversion rates.
- Led a dedicated SWAT team for 6 months, swiftly resolving critical production issues and optimizing code.

Interra Systems

Software Developer/Jan 2019-Sep 2021

(C++, Python, Computer Vision, Deep Learning, Image Processing, Java, Spring-Boot)

- Build advanced algorithms for error and artifact detection in Images and Videos using Image Processing and Computer Vision.
- Developed state-of-the-art spatial-temporal model for Explicit and Kissing Scenes classification in videos using **LSTM, CNN**, Object Detection, Object Segmentation, and **Transfer Learning**.
- Implemented Stream Parallelization and window-based prediction architecture for fast inference.
- Optimized inference time using **sparse and quantized weight matrix**, and space optimization of DL models using tf-mot and pruning methods.
- Developed cutting-edge Object Detection and Segmentation in natural scenes.
- Utilized **TF-IDF** method to classify advertisements into different categories based on text.

Skills

- Java, C, C++, Spring Boot, Maven, Rest Api's, GRPC, Kafka, Redis, CouchBase, Data Structure and Algorithms, Low Level Design, System Design, Git, Docker,

Education

Bachelor of Engineering/2015-2019

- B.E. in Computer Science, Thapar Institute of Engineering and Technology Patiala, CGPA-8.23.

High Senior Secondary/2013-2014

- Majoring in Math and Science, D.A.V Centenary Public School Hanumangarh, 80 %.
