TECHNICAL SKILLS

- **Languages:** Node.js, TypeScript, JavaScript, C++
- **Frameworks & Libraries:** Express, React.js, Jest
- **Databases:** SQL (MySQL), NoSQL (DynamoDB)
- **AWS:** ECS, EC2, Lambda, SQS, Cloudformation, S3, ALB, Cloudfront, API Gateway, Route53, Cloudwatch, Secrets Manager, Parameter Store, Athena, VPC
- **Architecture & Workflows:** Microservices, Distributed Systems, REST API's, GraphQL, Agile, OOP
- **Container Orchestration:** Docker, Kubernetes
- **CI/CD:** Gitlab, Jenkins

PROFESSIONAL EXPERIENCE

CHEGG

Software Engineer 2

Delhi, India

April 2022 - July 2024

- Led the development of the Chegg Writing Tools plagiarism detection system, integrating Turnitin via a GraphQL BFF layer. Utilized AWS Lambda, SQS, S3, DynamoDB, API Gateway, and ECS for processing, and enabled Turnitin access through API Gateway webhooks. This effort resulted in a 40% product growth and enhanced company branding within the student community.
- Led the integration of Copyleaks as the new plagiarism detection solution, establishing a Node.js ECS service for webhook management and a dedicated DynamoDB for result storage. Introduced Optimizely for A/B testing and adapted Lambda functions for cross-account communication, resulting in a 30% cost reduction.
- Contributed to the Chegg Writing Tools team by developing 3 diverse GraphQL subgraphs, instrumental in decomposing a monolithic GraphQL schema into modular, independently deployable ECS services.
- Spearheaded the Small Account Model (SAM), transitioning services from a shared AWS account to team-specific accounts. Led the migration of 10 ECS services, RDS, S3, and SQS, and rewrote CloudFormation IaC with Terraform, accelerating the build-deploy cycle and reducing AWS costs by 25%.

CHEGG

Software Engineer 1

Delhi, India

July 2019 - March 2022

- Designed the citation creation UI on Chegg.com using React, TypeScript, CSS, and Redux Toolkit, boosting user acquisition by 20%.
- Authored 25 chaos engineering sessions to test system reliability and resilience, identifying and addressing vulnerabilities to prevent user-impacting issues. Enhanced the team's ability to handle critical production issues.
- Automated GitLab review app generation with AWS CloudFormation for 5 code repositories, expediting development and improving CI/CD efficiency. This reduced sprint spillage by 35% by enabling independent testing of JIRA stories.

CHEGG

Software Engineer Intern

Delhi, India

Jan 2019 - July 2019

- Designed and set up infrastructure for aggregating real-time and pre-computed features for a tutor ranking system using ECS, Athena, and DynamoDB, supporting 1,000 active tutors simultaneously.
- Increased unit test coverage in tutor microservices from 25% to 95% through Test Driven Development with JUnit and Mockito.

EDUCATION

THAPAR UNIVERSITY

Bachelor of Engineering, Software Engineering

Patiala, India

June 2015 - July 2019

- CGPA: 9.19/10
