PROFILE SUMMARY

- A professional with an experience of over **5.7 years** in **Back-end API development**.
- Expert in technologies like **Java, Spring, Spring Boot, Hibernate, MySQL, ElasticSearch, kafka**.
- Experience working in complete project software development life cycle using **agile methodology**.
- Exposure on cloud technologies like **Amazon Web services(EC2, RDS, S3, Lambda)**.
- A team player and a self-starter with good analytical, problem solving and interpersonal skills.
- Ability to adapt quickly to new environments, learn new technologies, deliver quality work under pressure and aptitude to meet deadlines.

TECHNICAL COMPETENCIES

Languages & Back-end technologies	Java 8, Microservices, Hibernate, Spring, Spring boot, Spring Data/JPA , SonarQube, Kafka
Databases	MySQL, Oracle, ElasticSearch
Bug tracking tools & Project doc. tool	Atlassian JIRA and Confluence
Version control tool	Git
Development IDE's	Eclipse and Spring tool suite and IntelliJ
Servers	Apache Tomcat
Build Tools	Apache Maven

ORGANIZATIONAL EXPERIENCE

- **Senior Software Developer** at **Coditas Technologies, Pune** from **Jul 2020**.
- **Software Developer** at **Dimentrix Technologies, Pune** from **Dec 2017** to **Mar 2020**.

ACADEMIC DETAILS

- **Completed M.C.A(C.S) from Modern college, Pune - University of Pune, in 2018 with 70%**
- **Completed B.S.C(C.S) from Modern college, Pune - University of Pune, in 2015 with 60%**

ORGANIZATIONAL PROJECTS

Project Name : CARE
Client : Ambry Genetics, USA
Period : Nov 2020 – Currently working
Role : Senior Software Developer
Tech stack : **Java, Spring Boot, Microservices, Hibernate, MySQL, Elasticsearch, Kafka, Git, Jira, SonarQube**

Project Description:

CARE is an Ambry Genetics Project which allows patients to complete their assessment before coming to Ambry Genetics lab. It validates patient information against the NCCN Guideline to determine if a patient Met the criteria for cancer .

With intuitive navigation, modern and customizable design, and dynamic options for browsing, CARE has become the ultimate e-business tool for the Genetic Health industry.

Responsibilities:

- Developed RESTful APIs and microservices for various modules in CARE system using Spring Boot, Java 8 and Hibernate, enabling seamless integration.
- Worked on performance optimization.
- Analyzed and implemented Elastic Search for faster data retrieval to improve User experience.
- Implemented authentication and authorization mechanisms using Spring Security framework to ensure secure access control in web applications.

- Responsible for Code Review and ensuring 'Clean Code' principles are followed.
- Designed and executed JUnit and integration test suites.

Project Name : GALLOP
Client : IDFC, INDIA
Period : Jul 2020 – Nov 2020
Role : Software Developer
Tech stack : Java, Spring Boot, Microservices, Oracle, Hibernate, Git, Jira, SonarQube

Project Description:

The Gallop project is a comprehensive financial management solution tailored for corporate employees, designed to enhance transparency and empower users with efficient control over their financial portfolios. This innovative platform offers a range of features aimed at providing employees with a holistic view of their company's financial landscape.

Responsibilities:

- Developed RESTful APIs and microservices for various modules in GALLOP using Spring Boot, Java 8 and Hibernate, enabling seamless integration.
- Implemented authentication and authorization mechanisms using Spring Security framework to ensure secure access control in web applications.
- Implemented JUnit and integration testing.

Project Name : DeepInsight
Client : Dimentrix Technologies, India
Period : Dec 2017 – Mar 2020
Role : Software Developer
Tech stack : Java, Spring Boot, Microservices, Hibernate, Git, Jira

Project Description:

Deep Insight is a BI tool, a web application to retrieve, analyze, transform and report data Business Intelligence. This application generally reads data that have been previously stored in the form of flat files or in a database or located remotely or from integrated third-parties and can be accessed through a web data connector. These visualizations can be shared with specific users or can be published. We can also export our visualization to a zip file.

Responsibilities:

- Generating datasets from an integrated database and third-party APIs.
- Contributed to a team effort involving the migration from monolithic architecture to microservices architecture.
- Implemented JUnit and integration testing. Contributed to a team effort involving the migration from monolithic architecture to microservices architecture.

PERSONAL DETAILS

Date of Birth: 23rd Jun 1994.
Address: G:-42, NCL colony pashan road pune - 08
Languages known: English, Marathi and Hindi
Nationality: Indian
Hobbies/Interest: Gym and yoga.
