Academic Projects

Project on “P L C USING ELEVATOR ”

A Programmable Logic Controller (PLC) is a digital electronic device that uses a programmable memory to store instruction and to implement functions such as logic, sequencing, timing, Counting and arithmetic in order to control devices and processes and has been specifically designed to make programming easy.

The proposed elevator has 4 floors. There are set of buttons inside the elevator and set of buttons out side on the floors people in the elevator will be using buttons G,1,2,3 to move to the desired floor. People waiting in the floors for elevator will press the up/down button to call the elevator.

In this elevator there are two mode operation namely manual mode/auto mode operator this is applicable in automation field and may be used to ON/OFF the motor automatically as and when required.

Project on " POWER GENERATION USING SPEED BREAKERS "

Energy Conservation is the Cheapest new source of Energy. It is an Attractive Technology for optimal use of available Sources. This Project Attempts to show How Energy can be tapped and used at a commonly used system, the road-speed breakers. The Number of vehicles passing over the speed breaker in roads increasing day by day. there is possibilities of tapping the energy and generating power by making the speed breaker as a power generation unit.

Personal Profile

Name	Vinaya nadigar .B .M
Father	Mallari Rao .B.
