5 years experience | Chennai, India

SOFTWARE ENGINEER

Proficient Software Engineer with a passion for delivering impactful outcomes through application design and development. Expertise in problem-solving and implementing innovative solutions to enhance app performance and ensure stakeholder satisfaction. Skilled in a wide range of technologies including Java, Spring Boot, Google Cloud Platform (GCP), and more.

SKILLS

- Proficient in **Java**, **Spring Boot**, **GCP**, Linux, Gradle, Maven, JUnit, Mockito, Cassandra, PostgreSQL, Firebase, Redis, Microservices, Docker, Kafka, Dataflow, GitHub, Jira, **JavaScript**, **React JS**, Redux, TypeScript, Jest
 - Experienced in system design, problem-solving, and implementing innovative solutions
 - Strong knowledge of database design and API schema development
 - Excellent communication and collaboration skills
 - Proficient in English, Hindi, Tamil, Odiya; Beginner in Japanese
-

PROFESSIONAL EXPERIENCE

Full Creative Pvt. Ltd.
Software Engineer

January 2022 - Present

- Spearheaded the development of the Form Creator project, streamlining the process of creating and managing forms for clients.
- Collaborated with cross-functional teams to design and implement On-Call Schedules feature, ensuring efficient scheduling.
- Led end-to-end code refactoring for core backend projects, utilizing latest technologies such as Spring Boot and Java 17.
- Played a key role in designing and implementing backend systems for executing large tasks as smaller parallel sub-tasks, reducing system latency.
- Conducted thorough performance analysis and optimization of microservices architecture, resulting in a significant reduction in response time and resource utilization.
- Actively contributed to the development and implementation of security measures, including custom filter implementation, to enhance application security posture across projects.
- Utilized Dataflow for stream processing and real-time analytics, enabling timely insights and decision-making for stakeholders.
- Conducted peer code reviews, ensuring code quality and adherence to best practices.

- Designed and implemented queuing system for efficient data integration.
 - Developed caching system to optimize application performance.
 - Managed REST endpoints for third-party application use.
 - Maintained Cassandra DB schema for network design data.
 - Dockerized Spring Boot application and Kafka for SDN.
 - Conducted performance analysis on PostgreSQL DB.
 - Actively participated in Agile ceremonies, including sprint planning, stand-ups, and retrospectives, to drive continuous improvement and delivery excellence.
-

PROJECTS

Form Creator (Full Creative)

January 2022 - Present

A core module to the answer service system, Form creator allows users to create and manage forms that are to be used as scripts for answer client calls. It integrates with multiple external systems to manage the forms and receive and delivery client messages. Some of my noticeable works in the project are implementing a paged loading system for the branch data in the scripts, improving the system efficiency by implementing parallel processing for the system to handle the large request by splitting them into smaller and easily processable request improving the overall system performance and decreasing the occurrences of system failures by monitoring and updating the system deployment environment configuration.

Tech stack: Core Java, Spring Boot, Spring Cloud, Google Cloud Platforms, Firebase, Linux, Javascript, React.js, Redux State Management, TypeScript, Github, Sonarqube, JUnit, Mockito, Jest, Gradle, Webpack, Node.js,

VPD-Viper integrations (Fujitsu NC)

December 2020 - January 2022

Viper integrations was an interface module on top of the existing network controller called VPD. The VIPER integrations tool was used to create, and design network with virtual data and then later on operate network elements as well. Some of my noticeable works at this project are implementing a queuing system to manage the network input info, and integrate them on need basis implementing an in memory caching system to keep hold of multiple network designs, handling the database design and management for the project.

Tech stack: Java, Spring Boot, Cassandra, Postgresql, Docker, JAX-rs, Maven, Gerrit, GIT, ODL, karaf, Kafka.

EDUCATION

Vel Tech High Tech Dr.Rangarajan Dr.Sakunthala Engineering College, Chennai

Degree: Bachelors of Engineering

Stream: Electrical and Electronics Engineering

St. Joseph's Matric. School, Chennai

Higher Secondary Education
