

VINOOTHNA SAI KINNERA

Staff Software Engineer

+91 8639286088 • catchvinoothna@gmail.com • linkedin.com/in/vinoothnasai • Hyderabad, India

Summary

Product-driven Staff Software Engineer with proven expertise architecting and delivering end-to-end platforms across FinTech, Geospatial SaaS, AI/Legal Tech, Life Sciences, and E-commerce. Skilled at translating ambiguous business challenges into scalable, cloud-native systems and leading development of sophisticated platforms powered by Generative AI and Large Language Models. Strong track record driving technical strategy, mentoring engineering teams, and building software that creates significant business value.

Experience

KnackLabs

Hyderabad, India

Staff Software Engineer

11/2025

- Leading delivery of MINEGATE V1 to production, driving end-to-end technical execution from architecture refinements to deployment strategy while managing a team member and ensuring code quality through reviews and mentorship
- Driving technical roadmap for enterprise-scale features, making key architectural decisions for scaling platform to support larger mining operations, and establishing engineering best practices across the team

Software Development Engineer II

07/2025 - 10/2025

- Exercised complete end-to-end ownership of the MINEGATE GIS platform from client requirements gathering through production deployment, architecting and developing the entire system single-handedly with a scalable RESTful backend (Python/FastAPI) and interactive 3D frontend (React 18+, TypeScript, CesiumJS).
- Solely architected and deployed event-driven AWS infrastructure using Terraform (IaC), automating complex geospatial data transformations and reducing data processing time by 70% through a serverless pipeline (Lambda, SQS, ECS).
- Engineered and delivered a complete analytics dashboard (UKTI project for Paytm merchant client) for AI voice agent call analysis in 2 weeks, measuring agent effectiveness and providing actionable insights.

CAW Studios

Hyderabad, India

Software Development Engineer II

07/2021 - 06/2025

- Independently drove creation of the ALL SPARK AI-driven document processing platform from concept to production, building a modular document analysis engine using LangChain with multi-provider LLM integration (OpenAI GPT-4/4o, Anthropic Claude 3 Opus/Sonnet), implementing a knowledge base system with PostgreSQL (pgvector) for semantic search and RAG-based analysis supporting multiple document formats (PDF, DOCX, TXT, JSON).
- Designed a comprehensive admin portal with module lifecycle management, token-based authentication, credit allocation tracking, and complete AWS deployment using Terraform (ECS Fargate, S3, CloudFront, RDS).
- Led a team of three engineers on the CASHFLO Vendor Finance product, owning the technical roadmap and sprint lifecycle while architecting a mission-critical serverless credit data pipeline using AWS CDK (TypeScript), Lambda, and SQS to aggregate data from multiple third-party APIs (Karza, GST, MCA) and calculate credit risk metrics for financial institutions.
- Drove an 80% productivity increase for the marketing team by independently building a business advisors admin portal using Retool; led the development of a training matrix for the CELITO Learning Management System (LMS) using Node.js and PostgreSQL for a life sciences platform; designed comprehensive load and performance testing strategies for the HOICHOI video streaming CMS using k6, integrating performance monitoring with New Relic for real-time alerting.
- Recognized as a top performer, selected as one of two contenders for the CFER of the Year - In Tech award; built a secure e-commerce authentication service for Jolene.club; and mentored junior engineers across multiple projects.

Software Development Engineer I

10/2020 - 06/2021

- Delivered critical features for CASHFLO Vendor Financing product ahead of schedule, quickly mastering complex fintech domain concepts including early payment algorithms, invoice discounting workflows, and supply chain financing mechanisms through direct collaboration with founders.
- Contributed bug fixes to pdfkit open-source PDF generation library, resolving document creation issues and improving reliability for invoice and report generation across platforms.
- Engineered data pipeline for DriverSaathi platform to scrape and visualize Points of Interest across India using Google Local Places Search, implementing automated data extraction from dynamic web pages using Puppeteer and developing interactive monitoring dashboards in Kibana.

Spottabl

Bengaluru, India

Software Development Intern

06/2019 - 11/2019

- Designed and implemented robust data extraction and enrichment pipelines for resume parsing, significantly improving data accuracy and efficiency.
- Gained foundational experience in real-time data streaming with Apache Kafka, CI/CD with GitLab, and containerization with Docker.

Education

Indian Institute of Information Technology, SriCity

Sri City, Andhra Pradesh

Bachelors in Technology, Computer Science

08/2016 - 04/2020
