Hyderabad, India

Senior Quality Analyst / Tester

PROFILE SUMMARY

- **Software Quality & Testing professional** with **6+ years** of experience in software testing with eminent organizations in the **USA** and **India**, in **Banking & Finance domains**.
- Effective leader with skills in leading the team in implementing quality best practices & test strategies and building robust & flexible automation framework.
- Proven capabilities in contributing towards improvement of test standards and methodology across all test areas to ensure stability of the applications.
- Experienced working in a fast-paced Agile Development environment, with hands-on Scrum experience, managing all phases of SDLC, STLC and Defect Life Cycle inclusive of Change Request Management.
- Excellent communication (verbal/written), analytical and management skills; scored 7.5/9.0 in IELTS exam.

CAREER TIMELINE

Oct'22-present	Software Development Engineer in Test TCS, India
Sep'21-Oct'22	Senior Quality Analyst/Tester Bank of the West, India
Jun'17-Aug'19	QA Analyst/Tester Wells Fargo, Minneapolis, MN
Oct'14-May'16	QA Analyst/Tester Freddie Mac, Mclean, VA

TECH SKILLS

- **Testing Tools:** Quick Test Pro (QTP), Jira (Bug Tracking), Selenium-WebDriver, TestNG, Jenkins, Maven-POM.xml, Cucumber, Junit, Cypress, pytest
- **Web service:** SoapUI, Restful API Testing with Postman, Tomcat.
- **Methodology:** SDLC, Waterfall, Iterative, Agile
- **DBMS:** Oracle, SQL Server, TOAD, SQL PLUS, SQL Developer, Access
- **Languages:** Java, Java Script- (PHP, HTML, CSS, JavaScript, jQuery XML), PL/SQL
- **Defect Tracking Tools:** Test Director, Mercury Quality Center, Bugzilla
- **Configuration Management tools:** Clear Case, Star Team, VSS, Share Point
- **Other Tools:** MS Project, Netscape Navigator, Lotus Notes, Outlook Express, QMF, ATM Teller Machine

CORE COMPETENCIES

Software Quality Assurance

Automation Framework

Test Planning & Strategy

Test Automation

Test Scenarios & Test Cases

Defect Management

Bug Life Cycle

Documentation

Stakeholder Management

Team Management

EDUCATION

Master of Computer Science

New Jersey Institute of Technology,
Newark, NJ | 2014

EXPERTISE

- Functional Testing
- Performance Testing
- System Testing
- Integration Testing
- Regression Testing
- GUI Testing
- User Acceptance Testing
- Back End Data Testing

WORK EXPERIENCE & ACCOMPLISHMENTS

Quality Assurance

- Setup formal QA processes and ensure the usage of industry-accepted best practices by the team
- Monitor all aspects of quality assurance including establishing metrics, implementing best practices, and developing new tools & processes to ensure the meeting of quality goals
- Improve the overall QA and Testing process by identifying gaps or inefficiencies in workflows and suggesting improvements
- Enforce standard test processes and deliverables (including defect management and quality metric reporting) to streamline automation, performance, integration & system testing methodologies
- Diagnose defects and track them from discovery to resolution
- Work closely with Engineering Teams to stay informed of new technologies being introduced and to ensure that system components are designed for testability
- Address all requests from internal and client team members in a timely and professional manner

Testing Automation

- Create automation framework using Java and automated test cases using Selenium Web Driver
- Check for automation feasibility for the test cases, and create the automation suite
- Prepare, design and lead the test strategy and test plan for all projects
- Conduct review activities such as requirements review, design review, test strategy review and test case review
- Write and execute test cases, test scripts (from the BRD & SRS), plans and procedures (manual and automated)
- Analyze formal test results to discover & report defects, bugs, errors, configuration issues & interoperability flaws and recommend for improvement of applications to Programmers and Software Developers or Engineers

Agile Environment

- Implement Agile methodology and actively participate in Scrum ceremonies like daily stand-ups, grooming sessions, sprint planning meetings, retrospectives and management reviews, group discussions, quality and process trainings
- Promote core Agile principles & practices within the team to shorten cycle time & achieve target margins, encourage team cohesion, and overcome impediments & hurdles to improve quality & productivity
- Strive to improve Agile awareness and adoption as per Agile processes in each sprint

Team Building & Management

- Manage a team to perform testing life cycle activities and deliverables on time, within set budget
- Train the team on testing tools required to meet testing goals within the software development lifecycle (SDLC) and release schedules
- Ensure the follow-up of best practices in Agile and QA
- Provide knowledge transfer/support/assistance to team to resolve issues and report on quality of system maintenance activity and new releases

Cross-functional Collaboration

- Coordinate with business and technical teams during projects and mitigate/resolve risks impacting project schedule, cost, scope, quality, etc.
- Effectively communicate with a wide range of clients (partners, business users, IT team members, vendors, management)
- Provide regular feedback to Scrum Team for bugs or performance issues found during software development lifecycle
