Experience

Valuepitch

Navi Mumbai, Maharashtra, India

Software Engineer II

Jul 2021– Oct 2023

- Led a team of 5 to develop a new search system that has 8x the QPS and 80% reduced p99 compared to the older system.
- Achieved cost savings of over 25% in AWS bills by migrating batch processing jobs to spot instances, consolidating underutilized instances and, minimizing cross AZ network access
- Upgraded public APIs and backend systems to process 400% more requests by rewriting the query engine (Python, Flask, REST API, Elasticsearch, MongoDB).
- Developed a custom Named Entity Recognition (NER) model for case detail extraction from raw case judgment files, enabling efficient processing of 10 million cases. This model, integrated into a scalable system on AWS autoscaling, significantly reduced manual team workload by 90%, accelerating operations and saving substantial time.(Python, Spacy, NER-Annotator, Colab, Celery-RabbitMQ, AWS-AUTOSCALE, MongoDB)
- Engineered and executed efficient data processing ETL pipelines, resulting in a 80% reduction in data ingestion time and a 40% improvement in overall data quality (Python, MongoDB, Kubernetes, Kafka, S3, Celery-RabbitMQ).
- Took initiative to build a Python private package with core matching, custom scoring and pre and post processing algorithms, This package reduced code duplication by 10%, enhanced team efficiency
- Led the development of a cost-effective alternative to Genymotion, personally developing core APIs, and assigned tasks to team members (GCP-compute-engine, python, docker, cloud-android-emulators)

Software Engineer

Jul 2020–Jul 2021

- Automated image table extraction using image processing and OCR, eliminating the need for manual team intervention (Python, Open-CV, pytesseract).
- Enhanced the Centralise Authenticator API by introducing endpoint validation for API keys, and implemented tracking of API key creation, updates, and deletions in db for improved activity monitoring (golang, mongodb)
- Developed multiple tools to increase developer velocity by automating and speeding up the build and deployment process (Python, Golang, Docker, AWS, Kubernetes)

Data Scientist, Intern

Jan 2020–Jun 2020

- Created a dataset by extracting features from thousands of judgments using (Python, regex, and a pre-trained language model)

Skills

Programming: Python, PySpark, Scala (basic), Golang (basic)

Database: Elasticsearch, MongoDB, SQL

AWS: EC2, S3, ECR, IAM

GCP: Compute Engine

Other Technologies: Kubernetes, Docker, Redis, Git, REST API, Celery

Education

MET Institute of Computer Science

Mumbai

Master in Computer Application

Jul 2017–May 2020

D.G. Ruparel College

Mumbai

BSc in Information Technology

Jun 2013–Jul 2016

Certificates

Deep Learning Specialization by deeplearning.io
