

Vikash Kumar

Software Engineer | Golang and MERN Full Stack Developer | Backend Development

✉ kvvik2020@gmail.com 📞 8294385388 📍 Bangalore 🔗 [linkedin.com/in/kvvik2020/](https://www.linkedin.com/in/kvvik2020/) 🐙 github.com/vikashkumar2020

PROFESSIONAL EXPERIENCE

Software Engineer, Vunet Systems

02/2024 – present | Bangalore, India

Project : Context-Streams : A product build from scratch for Data-Pipeline Setup

- Working as a software engineer in the product development team for building scalable **monitoring, analytics** and **observability** solutions.
- Working with **Big Data** teams to build **plugins** and **libraries** to work as agents to send data to different sources using **open-source elastic beats**.
- I worked to build an application to read logs, files and traces and send over **http** and **gRPC** protocol to the **open-telemetry** collector which helped to improve speed by 10x and secured communication.
- Worked on building pipelines for logs, traces and metrics to send data from **Kafka** and **clickhouse**.
- Working to build exporters over open telemetry collector to receive and send data over various data-sources using **SDKs**.

Software Development Engineer, Narayana Group of Education - GTET

11/2022 – 02/2024 | Bangalore, India

Project : Product Analytics System : A product build from scratch for Projects analytics

- Worked as Software Developer Engineer 1 as Full-Stack Developer in **R&D** Dept. of Tech Team.
- Led the building of product analytics dashboard to bring end to end user journey **observability** and their **activities** to enhance **funnel marketing, engagement** and reduce marketing cost. This included **SDKs** development in typescript, analytics and campaign micro-services in **golang** and product dashboard application using **monorepo** setup using **React** and **nextjs**.
- In backend used **golang** along with **Gin** and **GORM** using **Domain Driven Design**. Used **Postgres** and **Clickhouse** for handling 10k request/sec. **Kafka** and **redis** as queue to bring **fault tolerant** mechanism and **producer consumer** pattern to use **goroutines** and **concurrency** enhance speed **1ms** response.

Project : Notification Campaign Launcher: A product build from scratch for Projects Campaigns and Notification

- Implemented a campaign management system utilizing **AWS SES, SNS, and FCM**, integrating **Redis Machinery** for asynchronous queueing and personalized notifications. Developd **SDK** to integrate with multiple applications to capture the user details and events via REST APIs to backend and send Push **notifications** to user with FCM tokens.
- Developed of **product dashboard** application using react, **nextjs** and **grafana** with role and project management support for various team to work. To setup configurations and launch **campaigns, notificatons, query, analytics, charts and others**.
- Proficiently managed service **deployment** using **Docker** and **kubernetes** for **containerization** and **orchestration**, github CI/CD and AWS for streamlined orchestration, thereby optimizing scalability, reliability, and operational efficiency.

Software Engineer Trainee, Lincode

04/2022 – 11/2022 | Bangalore, India

Project : Inspection Activity Service: A product migration from python to golang

- Contributed to the development of a highly efficient product inspection activity backend microservice with MVC using **Golang** and the **Mux** framework, leveraging **MongoDB** for robust data management of unstructured data.
- Build monitoring and activity service from srcatch to provide real time analytics and enhance the journey of user through **kafka** and **grafana** dashboards. I optimized backend performance by integrating APIs seamlessly and implementing analytics, resulting in enhanced system responsiveness.
- Enhanced the Livis Inspection Tool's frontend by building the components in **React** and **Angular**, resulting in streamlined and efficient user interfaces. Through a successful **POC**. Implementation of use-case-driven frontend solutions led to decrease latency by 800ms.

SKILLS

Programming

- Proficient (Golang, Javascript, Typescript, C, C++, HTML, CSS, SQL)
- Familier (Python, Java and bash)

Framework, and Libraries

- Gin, Mux, React.js, Next.js, Nodejs, Express, Npm, GORM, mongoose, MaterialUi, CharkaUI, elastic beats, open-telemetry, Grafana

Databases and queues

- Database (Postgres, MySQL, MongoDB, Clickhouse, SQLite)
- Queue (redis, kafka, machinery, SQS)

Cloud and Tools

- Cloud (AWS, SNS, SES, S3, VPC, E2, lambda)
- Tools and Platform (Git, Github, Docker, Docker Compose, kubernetes, UNIX, Linux)

EDUCATION

Bachelor of Technology in Computer Science and Engineering,

2019 – 2023 | India

Gaya College of Engineering, 8.52 CGPA
