Lovely Professional University, Punjab
B. Tech CSE

2015-2019

Relevant Coursework: Languages(C, C++, Python, JavaScript), Database Management, Data Structures and Algorithms, Big data fundamentals, Operating systems, cloud computing.

WORK EXPERIENCE

Internship Trainee, Mountblue Technology, Bangalore, India

05/2019 - 07/2019

- During my internship I was given training on full-stack technology(React, React Native, JavaScript, ExpressJs, HTML and CSS) and my task was to learn and understand industry standard coding patterns and full-stack technologies as well.
- I used to complete full-stack task given by them to understand depth of programming and solve real world problems.
- After completing my internship tenure I was able to grab a full-time Software Engineer role at Mumbai based startup LoveLocal(formerly mPaani).

Software Engineer, LoveLocal (formerly mPaani), Mumbai, India

07/2019 - 03/2022

- My role was develop features for its B2B, B2C and CRM applications. I had to interact directly with Product manager to understand and gather requirement and execute.
- I used to use frontend technology (HTML, CSS, JavaScript and JavaScript libraries React, React Native) to develop features.
- Those features helped LoveLocal Digitising & Organising Local Retailers to deliver the Neighbourhood Shopping Experience.

Sr. Software Engineer, LoveLocal (formerly mPaani), Mumbai, India

04/2022 - Present

- As a senior software engineer my role and responsibility is to manage existing B2B, B2C and CRM and take decision on tech to build scalable product. I have to monitor code and logics of my juniors colleague. I also used to take part in recruiting engineers.
- I have to build multiple scalable project from scratch (i.e - **LoveLocal Partner Web**, **LoveLocal E-Commerce Web** **Google Spot**) from scratch using new libraries such as Next.js, MDX apart from React and JavaScript.
- To solve those problems and integrate new libraries, I have to go through their given documentation to understand those technology and their feasibility before implementing. As a result I was able to build projects mentioned above.

PROJECTS

LoveLocal E-Commerce Web, LoveLocal (formerly mPaani), Mumbai, India

04/2020

- [LoveLocal](#) is E-commerce web app where customers can purchase their groceries and daily need products online from their Local Stores. This Project was one of the crucial product to be build from scratch.
- There were 3 frontend and 3 backend engineers working on this parallel. And my task was to develop its UI features. I used to gather requirements directly from the product manager and UX team for features.
- After 3 month we were able to finish this project successfully and made this product live.

LoveLocal partner B2B App, LoveLocal (formerly mPaani), Mumbai, India

05/2021

- [LoveLocal Dukaan: Sell Online – Apps on Google Play](#) is B2B android application where Indian Local retailers can launch their shop online and start selling. This project was to move from native android app to React Native cross-platform (Android & iOS) app.
- There were 3 developers were working on this to develop this. My task was to automate its KYC validation system and other 3rd party integrations such as (signzy, shadofax, and clever-tap). To build this project I used to coordinate with the product manager, UX and 3rd party support staffs.
- I was involved in this project's critical feature. I was able to complete my tasks and moved this to Playstore along with other features developed by colleague on time.

LoveLocal Partner Web, LoveLocal (formerly mPaani), Mumbai, India

01/2022

- [LoveLocal Partner](#) is Partner Web where users can register their shop and can find blogs related how to start small local business and grow their business. This project was assigned on me to build from scratch.
- It was mostly content driven platform but challenge was that I have to automate its blog and this site should be SEO driven. I used Next.js and MDX library in this project to build. As Next.js is JavaScript library which is suitable for SEO and MDX to automate blogs.
- I was able to complete this project as per expectation and this project helps marketing team to run various campaign and they can easily add new blog to this site.

EXTRACURRICULAR ACTIVITIES

Co-Founder, Code Genesis

05/2017

- Code Genesis was a 15-20 members student organisation where we used to organise Coding, Sports and Quiz events. During my 2nd year of under-graduation, me and my college mates found this organisation with the help of University Extracurricular Division.
- We used to organise various events such as Coding Contest, Sports (Cricket, Football) and General Quizzes. To conduct events successfully, We as a team used make sure we are fulfilling the required need like managing classroom availability and Sports Grounds to conduct events.

SKILLS

Computer: C, C++, JavaScript, Python, React, React Native, Nextjs, Database, Big-data, Operating Systems

Languages: English (Professional), Hindi (Native)

Certifications: Processing Bigdata with Hadoop using Azure HDInsight, Python for Data Science, Data Science Toolbox, Statistics with R.
