PROFESSIONAL SUMMARY

- Engineering Manager (DevOps & Security) with 10+ years in building and operating high-scale, latency-sensitive, secure, cost-efficient multi-cloud environments.
- Proven Leadership with strong hands-on experience across DevOps, SRE, Infrastructure, Security, Tooling & Backend Development with a solid foundation in System Design, Data Structures & Algorithms, problem-solving, and debugging.

SKILLS

- **Languages:** Python, Go, TypeScript, C++, C, Shell Scripting
- **Database:** MySQL, Redis, Hbase, Mongo
- **Backend Development:** Django, Node.js, Flask
- **Cloud Services:** Google Cloud Platform, Amazon Web Services, Microsoft Azure
- **Containerization:** Docker, Kubernetes, GKE, EKS, AKS
- **IaC/Configuration Management tool:** Terraform, Chef, Ansible, Serverless, Packer, Terragrunt
- **CI/CD/Build Tools:** Jenkins, ArgoCD, CircleCI, Spinnaker, Artifactory, Maven, Git
- **Log Management:** Graylog, Fluentd, Fluentbit, Elasticsearch
- **Monitoring Tools:** Prometheus, Nagios, Stackdriver, Grafana, Ganglia, AlertManager, Victorops, Thanos
- **Operating System:** Linux, Windows
- **Other Tools/Technologies:** Airflow, Kafka, Zookeeper, Userify, Redlock, Traps, Sentry, SonarQube, helm, Argo Workflows, Istio

WORK EXPERIENCE

- **Hike Private Limited** New Delhi, India
Engineering Manager - DevOps Aug 2023 - Current
 - Managed a team of 8+ engineers operating multi-regional Gaming/Payments infrastructure on GCP.
 - **Delivered \$50K+ monthly cloud/infra cost saving** across compute, storage, network, CDN, databases, GPU, vendors, and BigQuery by driving multiple cost-efficiency initiatives.
 - **Initiated and led development of multiple in-house DevOps tools** (DevOpsHub Access Management, DB Query Tool, SSH Manager, GCP Cost Tracker, Terraform automation), driving **>95% faster infra provisioning (3 hrs → 5 mins)**, optimized cloud costs monitoring, and ensuring **secure, audit-compliant access management for 100+ employees**.
 - Led internal and statutory **ITGC audits to achieve zero-gap closure**, while created and updated key policies covering Access Management, Password Security, Information Security, and Change Management.
 - Spearheaded the **end-to-end infrastructure setup for Launch of New Bingo App in US market** from the ground up, identifying requirements, proactively resolving cross-team blockers, and delivering a secure, reliable infrastructure while minimizing costs.
 - Directed and reviewed **security initiatives** that streamlined Penetration testing workflows, automated API inventory & new API detection across 100+ endpoints, **introduced DAST and fuzzing automation to enhance application security posture**.
 - Led the PoC & seamless rollout of Vault, ensuring **secret mgmt for 150+ services & 50+ engineers**; resolved critical network/firewall exposure issues & implemented WAF enhancements to **strengthen infra security**.
- **Skyflow Inc.** Bangalore, India
Senior Site Reliability Engineer May 2022 - Aug 2023
 - Designed and developed a **Kubernetes operator** to automate **Terraform/Terragrunt deployments across 40+ AWS accounts**, **eliminated drift issues**, **cut manual effort by 90%**, **reduced deployment time** from hours to minutes, and **ensured consistent infra state across environments/accounts** with increased visibility.
 - Restructured Helm charts and **built a centralized Helm config management tool** consolidating **1200+ configs across 40+ Kubernetes multi-account clusters**, reduced day-to-day config drift issues, ensuring consistent configs, and simplifying releases.
 - Enabled Istio mTLS among services with AWS PCA without any downtime.
 - Actively collaborating with other team members to support their daily tasks and understanding/resolving infra side dependencies for projects.

- Providing technical guidance and support to a team of 4 engineers by knowledge transfer, working sessions, and resolving issues that blocked their progress.
- Troubleshooting and resolving a wide range of issues in the infrastructure and codebase.
- Participate in On-Call Rotation.

● **ThoughtSpot Inc.**

Bangalore, India

MTS

Sept 2020 - May 2022

- **Improved Reliability of Kubernetes infrastructure in Hybrid cloud environment** and increased provisioning success rate from 60% to 100% just after joining the organisation.
- Designed and **developed Auto detect and heal system** to enable proactive observability for Kubernetes infrastructure. A tool to detect various infrastructure and application level problems and resolve them in automation fashion. Technologies: Python, Flask, Redis, MySQL, Prometheus Stack.
- Debugging and fixing various issues in Hybrid Cloud Environment.
- Playing critical role in **AWS to Azure migration initiative**. Developed majority of base infrastructure in Terraform.
- POC and Production setup for various Azure services. Leveraging open source projects like cert-manager, ExternalDNS, AAD Pod Identity and Azure AGIC to expose endpoints securely in automation.
- Designing and Implementing various infrastructure components in AWS using Terraform for SaaS offering of product.
- Creating CI/CD pipelines in Jenkins and Spinnaker for various microservices.
- Improved Terraform deployment time in AWS by dividing existing codebase and large state to smaller logical infrastructure pieces.
- Automation of Cloud Images with Packer and Ansible.
- Participate in On-Call Rotation.
- Mentoring team of 6 people and closely engaging with other team members in helping with their day to day activities by providing necessary KTs, working sessions and fix issues to unblock them.

● **Hike Messenger**

New Delhi, India

Senior Software Development Engineer - DevOps

Nov 2017 - Sept 2020

- Responsible for end-to-end large-scale, robust distributed systems hosting **100+ million users**.
- Maintaining framework for seamless deployment of new/existing services in production infrastructure with no downtime. Moved all the services in autoscaling using this framework. This saved huge cost of prescaled infrastructure, reduced deployment time, automated deployments and increased fault tolerance. Technologies: Python, Flask, Chef, Cloud Pub/Sub. (<https://blog.hike.in/autoscaling-6fb431693b91>)
- **Designed and Implemented Audit Log platform** for monitoring and logging OS level user activities across the cloud infrastructure in real time. Added all the production and staging servers in this platform without any performance impact of running services. Tools: Graylog, Fluent Bit, Fluentd, Elasticsearch.
- **Cloud Infrastructure migration from AWS to GCP near zero downtime.**
- Container Orchestration using Kubernetes. end-to-end migration of VM based deployments to Kubernetes. Automating Kubernetes deployments using Jenkins and Spinnaker pipelines. (Blog1, Blog2)
- **Migration of MySQL, Mongo and Redis databases with no downtime.**
- OS upgrade from ubuntu 14.04 to ubuntu 16.04 in whole infrastructure including databases with no downtime.
- Version upgrade of MySQL, Mongo and Redis databases with no downtime.
- Infrastructure monitoring using Nagios, Ganglia and VictorOps.
- Analyze and fixing issues in overall infrastructure including Linux, MySQL, Mongo, Hbase, Redis etc.
- Applied security patches to tools like artifactory and jenkins with no downtime.
- Infrastructure resource optimisation in all projects to reduce infrastructure cost with no production impact.
- Replaced SSL certificates for different domains all-over the infrastructure.
- Threat monitoring using RedLock and Traps.
- Participate in 24x7 On-Call Rotation.
- Take interviews on regular basis for team.
- High Rating in both annual appraisals along with promotion.

- **Digital Green**

New Delhi, India

Assistant Software Engineer

June 2016 - Nov 2017

- Designed and implemented IVR Helpline System. A free helpline number receives missed call and connect user with experts for solving user's issues. Technologies: Python, Django, MySQL.
- Designed and implemented IVR SMS service for Market price Information. An IVR service for providing price Information of Market through SMS. Technologies: Python, Django, MySQL.
- Developed Backend API for Web and Mobile applications.
- Implemented Data Entry Tool named Health and Nutrition COCO using in house COCO framework. Works online as well as offline and sync offline data when user comes online. Technologies: Python, Django, MySQL, HTML, CSS
- Troubleshooting, Bug fixes and Enhancement in all project of organisation including facebook game, analytics platform etc.
- Data integration from other sources to Main database.
- High Rating in annual appraisal.

- **Hike Messenger**

New Delhi, India

SDE Intern

Jan 2016 - May 2016

- Designed and Implemented Web application named AWS Infrastructure Reporting Tool for showing information of currently running infrastructure, their cost according to different parameter, reservation details etc. Technologies: Python, Flask, HTML, CSS, Bootstrap.
- Designed and implemented utility for giving ssh access to user.
- Implemented Slack utility which allows users to change their VPN password.

EDUCATION

- **Motilal Nehru National Institute of Technology**

Allahabad, India

Master of Computer Applications, CPI: 8.87/10

July 2013 - June 2016
