

- Overall IT Experience 6.6 Years.
- Worked on Modern JavaScript Development using **ReactJS and Redux** for more than 5+ projects.
- Experience in conducting client meetings, presentations, and demos to effectively communicate project status, progress, and future plans and documentation.
- Ability to analyze client requirements and provide recommendations for improvements or alternative solutions.

Professional Experience

Module Lead ACL Digital | February 2022 – Present

Principal Software Engineer Sakha Global | December 2017 - February 2022

Key Skills

- Front End Technologies: HTML5, CSS3, JavaScript, Typescript, jest, jasmine and ES6+.
- Frameworks and Libraries: React, Redux, Bootstrap, SASS, Angular 14.
- Debugging Tools: Chrome Devtools, React Devtools, Redux Devtools, Lighthouse Audits, React Profiler and MobaXTerm.
- Bug Tracking Tools: JIRA and Asana.
- Others: kubernetes, Activi BPMN (Similar to pega)
- Version Control: Git
- Domain Knowledge: E-Learning, E-Commerce, Task Management and Reverse Logistics, Shopping and telecom.

Projects

ACL Digital Projects

Project-01: Amazon Go JWO (Just Walk Out)

Project title: Q-Manage

An enhanced portal designed specifically for the Amazon Go support team to streamline their operations and improve efficiency. This portal provides real-time insights into the number of live stores and their performance metrics, allowing the support team to effectively monitor and analyze the performance of each store. This portal offers a user-friendly interface for managing and updating software components, ensuring smooth operation and timely updates.

- Developed a page allowing users to view current and historical associate status.
- Was part of migration team from angular to react-js.
- Had direct communication with the business team to fix high-priority tickets.
- Responsible for developing features after discussions with the design team and program manager.
- Used Asana for agile development.
- **Tech Stack used:**

Front End: React, typescript, jest and Amazon internal tools.

Backend : Java, AWS Lambda, MongoDB, Elastic search.

Project-02: Amazon Go JWO (Just Walk Out)

Project title: Q-Train

The enhanced portal for Amazon Go associates offers a seamless and efficient solution for handling live inquiries and managing training requirements. Associates can access the portal to address customer inquiries in real-time, ensuring exceptional customer service. Additionally, the platform serves as a comprehensive training hub, providing trainers and trainees with a wealth of resources and interactive modules to understand the fundamentals of Just Walk Out (JWO) technology and store operations.

- Worked on giving access to buttons based on a specific role for editing the ground truth
- Responsible for developing features after discussions with the design team and program manager.
- Used Asana for agile development.

- **Tech Stack used:**

Front End : React, typescript , jest and Amazon internal tool.

Backend: Java, AWS Lambda, MongoDB, Elastic search.

Project-03: Ericsson

Project title: OMC_GUI

A Platform to monitor the assured service data and on-board different data source. OMC Web application pages are provided with a consolidated summary status of sites and each data source onboarded. Separate OMC Web pages for viewing logs, fault and performance metrics.

With various filter options are also available for user.

- Responsible for developing features and enchantment as assigned in JIRA.
- Worked on handling the legend formats for metrics graph.
- Worked on handling the size of page to priest when the route changes.
- Responsible for writing a document for the feature worked on and get it reviewed.
- **Tech Stack used:**

Front End : Angular-14, typescript , jasmine, keycloak.js

Backend : Python, elastic search, Kubernetes.

Sakha Global Projects

Project-01: One Dine

Project title: One Dine (Portal)

OneDine serve's the guests better through technology. Restaurant management web application which allows the user to scan to order and scan to pay features. Customers can enjoy a contactless dining experience without the need for physical interaction. Ondine Portal is web application for admin in-order to configure and manage the various food menus data and store information. It also a feature to generate the historic report.

- Wireframed / designed the UI for the initial set of pages for client approval.
- Developed the responsive UI by using Bootstrap 4 & CSS media queries.
- Created a few reusable React components for forms and tables.
- Developed custom skeleton screens for the application for a delightful user experience.
- **Tech Stack used:**

Front End : React, javascript, formik(handling the forms), es-lint and husky.

Backend : DotNet, mysql.

Project-02: Knowledge Podium

Project title: Knowledge Podium

A Project that blends engineering and manufacturing knowledge to develop self-directed, digitally interactive products, simulating real life experiences. This is an e-learning application built with React on the UI and Java on the backend.

- Implement JWT token and modified the existing framework by reducing the number of calls from backend to react front end.
- Developed the responsive UI by using Bootstrap 4 & CSS media queries.
- Involved in production deployment.
- Worked as git maintainer involving merging of release branches to hotfix branch.
- **Tech Stack used:**

Front End : React, JavaScript, formik(handling the forms), es-lint and husky.

Backend: Java, Spring boot, My SQL, Mongo DB and elastic search.

Project-03: Reverse Logistics

Project title: BizLog

BizLog is a product versatile reverse logistics organization. Handle any and all kinds of products across a wide range such as medical equipment, apparels, electronic appliances, technology products, electrical, electronics, apparels, footwear, waste management & much more for which we can handle many services. Starting from DOA management to product audits to value added services & returns management depending on the Product or Industry.

- Developed more than 10+ business flows for the client BizLog.
- Created a common model in activity BPMN Tool.
- Giving a demo to the client and creating documentation for future reference.
- Gathering client requirements, translating them into technical specifications, and delivering quality products and services.

- **Tech Stack used:**

Front End : BPMN Activi Tool, Angular. JavaScript.

Backend : Java, iBatis, My SQL.

Education

Bachelor of Engineering in Computer Science

Declaration

I hereby declare that the information furnished above is true to the best of my knowledge.
