Mobile No: +91-7837013043

bansalvidhi3@gmail.com

To become a Developer and work on challenging project where I can learn and explore new skills to contribute for the growth of company and to have a good learning curve.

SKILLS

DATABASES: SQL SERVER, MY SQL, DB2

LANGUAGES: CORE JAVA

J2EE TECHNOLOGIES: HIBERNATE

FRAMEWORKS: SPRING, SPRING BOOT, HYSTRIX

WEB SERVER: TOMCAT

WEB LANGUAGES: HTML5, CSS, JAVASCRIPT

SERVER SIDE SCRIPTING: PHP

DATABASE TOOLS: SQLSERVER MANAGEMENT STUDIO (SSMS), IBM DATA STUDIO,

MONGO COMPASS

IDE: ECLIPSE

ADDITIONAL SKILLS

- TIME MANAGEMENT AND TIME BOXING TO COMPLETE THE ENHANCEMENTS IN TIME
- GOOD COMMUNICATION SKILLS, AS I CLOSELY WORK WITH BUSINESS TEAM AND STAKEHOLDERS LOCATED GLOBALLY.
- HAVE GOOD SKILL IN PRIORITIZING AND DELIVERING WORK TO SATISFY CUSTOMER REQUIREMENTS.

EDUCATION

BACHELOR OF TECHNOLOGY IN COMPUTER SCIENCE AT LOVELY PROFESSIONAL UNIVERSITY, PHAGWARA WITH AN OVERALL CGPA OF 8.2

EXPERIENCE

FEBRUARY 17TH 2017 – 22ND April 2021

ASSOCIATE DB/JAVA DEVELOPER, COGNIZANT

TECHNOLOGY SOLUTION

Project: Underwriting Portal

Summary: Insurance Portal to help underwriters to book a policy. The portal is interfaced with third-party cross platform systems with 6 technology streams involved. The users around the globe and requirement of them were challenging to integrate into a single platform. Also, insurance being a wide domain, several Line

Edit with WPS Office

Of Business were being developed and maintained efficiently.

UI: User enters the policy details which flow to File Component known as Case Manager that contains flow of application.

Reference Database: The values fetched from Reference DB are displayed in UI portal.

Database2: The value selected by user in drop down will be stored in DB2 which further will be used by Java Service Layer to interact with other Layers.

Java Service: The layer which contains core Business Logic and interacts with database to build request and pass it to the next mentioned layer.

BizTalk: It is Enterprise Service Bus that transforms the JSON request based on downstream systems.

DocGen: All the details will be flowed to this layer and JSON parameters will be extracted and passed to Expression Layer where templates are being stored.

Expression: The layer which holds the template of documents that needs to generate for end users. Further this interacts with other downstream layers and store all the user related information successfully.

Roles and Responsibilities:

- Requirement discussions on new Change Request.
- Implementing DB changes as well as Java for change requests and business requirement.
- Fixing and testing of SIT and UAT defects.
- Providing Release Notes with details of artifacts to promote in upstream environments.
- Working on Change Requests or enhancements.
- Data loading and mapping for integration of downstream systems with portal application.
- Have good expertise in Views, Functions, Stored Procedures, triggers, MQT and Temporary Tables
- Backup and restoring DB.
- Development and modification of PL/SQL code.
- Configuring user access in Master Data Service.
- Close interaction with stakeholders to resolve Warranty incidents.
- Providing fixes in existing Code.
- Working on Jira task for new enhancements

• May 03TH 2021 – Feb 22 2022

• **IT Analyst | JAVA DEVELOPER**, TCS

• **Project**: AEM Migration

• **Summary**: Migrating from one service to other which will be having extra features of in-MemorCache, GemFire changes.

• **Responsibilities**:

1. Working on microservices, spring boot
2. Taking care of deployment activities for DEV and UAT environments
3. Working on BitBucket version tool
4. Taking care of JIRA defects.

- Feb 22 TH 2022-Present
- **Sr. Software Engineer|JAVA DEVELOPER,Wipro**
- Project: A\$M
- **Summary:** Worked on restful Api's, migrating java application for jdk 8 to jdk17, defect fixes, deployment activities for DEV and UAT environments.

ACHIEVEMENT

- Recognized as Orbit Shifter – Quick learning fresher, who is ready to work in project without any training. They have a very fast learning curve and career growth.

Adhoc Project:

Created a project for Order and Transaction Management of goods. Two Micro services were created, registered in Eureka Server through which one service dynamically discovering the network location (IP address and port) of another service to

communicate with it. The Services that register in Eureka Server to obtain information about each other are called Eureka Clients. An API Gateway was used i.e. Zuul server which handles all the requests and performs the dynamic routing of micro service applications. Order micro service is trying to communicate with the Payment microservices through Rest Template. A library was used named as Hystrix that controls the interaction between microservices to provide latency and fault tolerance. Additionally, it let the user know that something might not have worked as expected or would take more time.

EXTERNAL CERTIFICATION

- PROFESSIONAL EXCELLENCE IN RDBMS USING PL/SQL – NICE INSTITUTE WITH 90%
- PHP CERTIFICATION FROM C-TAC INSTITUTE WITH 80%
- M001 COURSE: MONGO DB CERTIFICATION FROM MONGODB UNIVERSITY
- Completed the course in Udemy for SpringBoot Fundamentals which include Spring 5 Core, AOP, Spring MVC, Spring Security, Spring REST, Spring Boot 2, Thymeleaf, JPA & Hibernate
