

Summary — Software Developer with **6+ years of hands-on experience** as an **Individual Contributor**, building robust and scalable solutions across multiple domains. Proficient in **backend and full stack development** . Experienced in driving end-to-end contributions with a proven record of improving performance, **scalability, and reliability** of systems .

Skills

Programming Java 8 , Scala , C#	Version Control Github ,GitLab SVN
Cloud AWS ,AWS Lambda , EC2	Database DynamoDB , Postgres
DevOps Maven , Jenkins , Docker , Kubernetes	Cache Redis
Frameworks Spring , SpringBoot , Hibernate	Message Queue Kafka

Experience

Microsoft

June 2024 – Present

Software Engineer 2 (L62)

- Currently working with ODSP team which handles and Automates **Reliability** and **Scalability** of GridManager .
- Implemented high-availability **database failover strategy**, improving system resilience and reducing downtime by redirecting **read/write traffic across primary and replica nodes**, resulting in 25% improvement of Latency across api .
- Proposed and drafted design documents of various functionality migration and executed them .
- Automated **SEV-2 and SEV-3 bug analysis workflows**, cutting investigation time and improving incident response.

Amazon (Role ended due to org-wide restructuring)

Aug 2022 – Feb 2023

Software Development Engineer 2 (L5)

- Worked with Amazon Payments Team for the Payout of payments which enables payment to the merchant also done integrations with different merchants microservices which interact with bank API to process the Payment .
- **Improved P 99 latency and API response time by 5%** reducing extra network calls .
- Rectified **production level bugs** and provided production support for **on call** .
- Drafted **high level Low Level design documentation** and actively participated in **design and code reviews**.
- **Mentored** and managed a team of 3 junior SDE's.

PayPal

Sep 2021 - July 2022

Software Engineer 2

- Contributed to Paypal's Credit risk merchant lending Platform team for loan approvability service which approves loan applications of customers .
- Gained exposure in end-to-end development of including high level low level design , from requirement to analysis to designing of code and testing.
- As SME for the Approvability Service, a **RESTful API** assessing loan approval likelihood for merchants, **reduced processing time from 4 hours to 2 hours**.
- Optimized the Risk Credit Merchant Decision (RCMD) service, automating over **500,000 merchant loan requests** annually through KYC/KYB checks and service integrations .

Amdocs

April 2020 – Sept 2021

Software Engineer

- Developed and designed various features of Java backend applications like integration with bank connector and Topup systems based product in financial services domain.
- Applied various **design patterns and object oriented design** for writing robust code .
- Implemented **concurrent and thread-safe** functionalities using **multithreading** techniques
- Wrote **Unit test cases** ensuring better code coverage and monitored application parameters using **kibana** .

Infosys Limited

May 2018 – March 2020

Systems Engineer

- Handled **Java application development** including design debugging of code.
- Managed **CI/CD tools** for backend application deployments.
- Worked with Unix /Linux environments .

Education

SKIT , Jaipur (2018)

Bachelor of Technology in Electronics and Communication Engineering
