INTRODUCTION

I have been working in the engineering space for over 8+ years, with strong expertise in distributed systems, backend development, and solutions architecture/infrastructure, all the way to native mobile development.

With a keen eye for design and a strong MVP-first mindset, I maintain a strong interest in building successful products with the consumer-first approach. I am a firm believer in design-thinking and testing hypotheses to confirm product-market fit. I am pragmatic in my approach with a quick turnaround on feedback, striving to strike a good balance between speed and quality.

SKILLS

- **Backend:** Golang, Java, Redis, Microservices, Kafka, AWS, Sql, NoSQL.
- **Database:** Mysql, Dynamodb, Cassandra, PostgreSQL, Oracle
- **DevOps:** Docker, Kubernetes, Helm, Terraform, Gitlab CI
- **DataStructures :** Have solid skills in data structure. Achieved the [AlgoExpert](#) certification.

EXPERIENCE

Grab, India— *Backend Engineer*

AUG 2019 - Present

1. Endpoint Protector

- Developed a backend system to help prevent abuse on grab endpoints. This service protects endpoints from bot/script attacks.
- Service provides preventions from endpoint abuse from scripted calls, replay of bulk create and store, sudo realtime retry, emulated mobile environment, modified apps etc. and helps in rate limiting the requests.
- At Present it is helping in saving around average \$41k per month.

2. Ronan

- Developed a backend system which provides fraud and risk-related signals about an IP address, which is getting used for effective risk management.

3. Fake GPS detection

- Developed a backend system which is responsible for real time Fake GPS detection.
- This automated system creates models by combining real time flow of data from mobile apps of all the users. Created separate service which uses these models for real time Fake GPS detection.
- This system had brought down the location related frauds to a huge extent and at present it's helping in saving around average \$70k per month.

4. Anti-Abuse

- Developed a system (contains multiple products and tools) to fight against and protect active abuse and fraud in Grab Platform and partners.
- System ensures the validity and sanity of the App and device.
- Provides protection from wrongfully changing/spoofing GPS coordinates to get an unfair advantage in business.
- Identify devices uniquely even if a device is formatted or being spoofed to act as a different device. Helps us in avoiding multiple device related fraud.

5. GDDash

- Developed a system which helps us in creating Datadog Dashboard and Monitors as a code using terraform.
- This system leads to a systematic and centralized way of creating monitors with an approval process in place which leads to an increase in the quality of our monitoring system to a huge extent and reduces the efforts needed for creating monitors for a new client by 99%.

6. API-Warden

- Developed an Automation security project to automatically detect missing authentication, authorization, critical endpoints dealing with PII/HBI data and other misconfigurations(Cors , AccessLog, Rate Limiting etc..) into all publicly exposed API endpoints across Grab.
- Automatic alerting for the detected Endpoints via slack, jira, email and provided user interface that enables security partner to work with their service team to review the endpoints and take actions accordingly.

7. Vajra

- Vajra is designed as an internal tool to facilitate the automated Rest API Penetration testing and produce findings that can be stored and consumed by external services.
- Was the owner of the system and worked on it from early stages including planning, designing, and development

ThoughtWorks, India — Backend Developer

DEC 2016 - AUG 2019

Passionate about writing clean code to solve complex technical challenges along with the best practices in terms of quality, performance, and scalability.

1. [GOJEK](#) (Southeast Asian on-demand multi-service platform and digital payment technology group)

- **PayLater :**
 - Lead a Team of 5 to develop a credit line payment service.
 - Created and Integrated SDK to provide PayLater as a checkout option in multiple products ex: Go-Food, Go-Ride etc..
 - Worked very closely with Product Manager to plan gradual staged rollouts to users, discussions on UI design, planning and managing stories.
 - Converted 37% cash transactions to cashless transactions.
- **Mercury :**
 - Developed a system which offers a variety of services at home. Customers use this platform to book services such as beauty treatments, haircuts, cleaning etc..

2. [CreditSuisse](#) (Global investment bank and financial services firm)

- **Gifts and Entertainment :**
 - Converted a manual reimbursement process into a website. This Website allows a user to file expenses online. Worked as backend developer using SpringBoot and oracle as a Database

3. [Delta Airlines](#) (One of the major airlines in united states)

- **FSPM :**
 - Developed a feature to highlight and compare the benefits of various cabins and book a seat within the same
 - This Increased the with in higher order cabin by ~20%

IndiaReads, India — Application Developer

JULY 2015 - Nov 2016

1. Iread

- Developed an online book rental platform that enables users to buy and rent books online. Integrated third party payment gateway like paytm and PayUmoney

EDUCATION

GraphicEraUniversity, Dehradun, India — *B.Tech* (2011 - 2015)
