

PROFESSIONAL EXPERIENCE

Senior Software Engineer

Jan '23 - Present

ArmorCode Inc.

Unify application security and vulnerability management

- Integrated over 10 **security tools**, including AWS Inspector, Spectral, and Lacework, among others which unifies vulnerabilities into one platform and seamlessly routes security issues into developer workflows.
- Managed the **migration** from Armorcode to **Zendesk**, our support and documentation portal. This involved creating all Armorcode users within Zendesk and providing them with the appropriate access.
- Developed several Armorcode **V2 APIs** from scratch to enable data retrieval across various business units of an organization.
- Responsible for maintaining and monitoring vulnerabilities **deduplication algorithms**.
- Owner of ArmorCode's **Risk-Based Vulnerability Management (RBVM)** Module, enabling the unification and normalization of vulnerabilities from hundreds of application, infrastructure, and cloud security scanners.
- Leading **AI-driven development** adoption using tools like Claude Code, Windsurf and Rovo CLI; creating tutorials to enable company-wide usage.

Software Engineer

Aug '22 - Nov '22

Ocrolus Inc.

Ocrolus helps lenders manage risk and avoid fraud by automating document analysis.

- Worked on building scalable app **Dropper** using **master worker architecture**. This app allows its users to validate documents present on S3 and then upload them to internal apps for processing (OCR + HITL) and then manages analytics on these documents.
- Dropper app **eliminated 1 week of manual effort** required per job execution. It can process thousands of documents simultaneously
- Developed **Slack bot** to notify stakeholders about important changes in configuration for a client
- Worked on app for managing on-boarding of new clients and manage configurations. It removed dependency on on-call team and **reduced** time to change config for clients from **hours to minutes**
- Created grafana dashboards for monitoring APIs usage and performance metrics

Software Engineer

Sep '20 - Aug '22

Nagarro

- Worked on Backend APIs for Maruti Suzuki subscribe which is car subscription platform from Maruti Suzuki
- Developed various **REST API** endpoints end to end using Java, Spring boot and wrote unit tests using JUnit
- Worked on Login functionality for back-office portal used by leasing partners and car dealers using AWS Cognito
- Developed asynchronous Email and SMS notification feature using Message broker RabbitMq
- Implemented customer login functionality using AWS Cognito with custom AWS lambda authorizer.
- Worked on various **POCs**(Proof of concept) to demonstrate its feasibility inside project

KEY SKILLS

Programming Languages: **Java** (Proficient), python(limited experience)

Frameworks or Technologies : **Spring boot**, JPA, Hibernate, Maven, JUnit, Docker, Object-oriented programming, Design patterns, Data structures and Algorithms, RESTful Web Services, Microservices, Distributed Systems

Databases: **PostgreSQL, MySQL, Elasticsearch** Version Control : **git**

Cloud : **AWS**

EDUCATION

Bachelor of Technology, Information and Communication Technology

Jul '16 - May '20

Dhirubhai Ambani Institute of Information and
CommunicationTechnology

Gandhinagar, Gujarat
