

# Vevin Moza

Phone: +919541472150- Email: vevin.moza99@gmail.com

## PROFESSIONAL SUMMARY

- ❖ Strong background in Java/ Java 8 Programming
- ❖ Good knowledge of OOPS/ SOLID/ GoF Design Patterns and Clean Code concepts
- ❖ Experience developing automation frameworks for UI Automation using tools like Selenium-Web driver , TestNG, Junit, Maven, Git and other open source automation tools
- ❖ Sound familiarity with DevOps tools like docker, vagrant, consul, Kibana, ELK-stack, Ansible, Terraform, Kubernetes
- ❖ High proficiency in creating and executing automated test scripts in Agile based team-structures.
- ❖ Strong background in gray box testing with applications having micro-services based application architectures
- ❖ Experience with distributed testing using Selenium Grid and using docker-selenium to scale automation tests.
- ❖ Experience with API automation testing in micro-services based fault tolerant and distributed architecture
- ❖ Strong knowledge about REST and SOAP based Web-services
- ❖ Exposure to building REST web-services using Spring Boot/ Hibernate (for data setup)
- ❖ Experience building mock-services for independent testing of micro-services
- ❖ Good Experience building frameworks for API testing using tools like Rest Assured, TestNG, Cucumber and Maven
- ❖ Setup Elastic Search and Logstash for Logs management
- ❖ Good Experience with writing performance tests using Gatling and using web debugging tools like Fiddler and Charles proxy
- ❖ Sound knowledge of SQL and NoSQL databases and experience with setting test data and data validation in databases like Oracle, MongoDB
- ❖ Experience with Continuous Integration tools using Jenkins, TeamCity and Go for scheduling Performance, Automation and API tests
- ❖ Basic knowledge of Unix/Linux administration
- ❖ Experience creating Ansible Tasks, Setting dockerized ELK stack, dockerized Nexus Repository
- ❖ Setup Server monitoring from scratch using Telegraf/ InfluxDB and Grafana.
- ❖ Setting up Real time monitoring of test-case execution using Grafana/InfluxDB
- ❖ Creating Jenkinsfile for Job Creation and Management
- ❖ Creating API's for Automation Tasks managements like upload test results to Generate Templates and Running Ansible tasks on linux server
- ❖ Hands on experience working on Linux based Operating Systems and bash scripting
- ❖ Understanding of networking TCP/IP protocols like IP/ TCP/ ARP/ UDP/ SSL/ HTTP/ HTTPS

---

## SKILLS

- ❖ **Programming Languages :** (Java / Java 8, Java-script, HTML5, CSS3)
- ❖ **Data-interchange formats:** JSON ,XML

---

Phone: 213.308.0258 ♦ Email: vevin.moza99@gmail.com

- ❖ **Automation Testing Tools :** (Selenium Web Driver , Selenium Grid, Cucumber JVM, Rest Assured-API) , SOAP UI, POSTMAN, BrowserMobProxy, Appium
- ❖ **Testing Frameworks:** TestNG, JUnit, Scala-test
- ❖ **Cloud Platforms:** AWS
- ❖ **Database/Database Tools :** (Oracle, MySQL, InfluxDB, SQL Developer)
- ❖ **API Testing :**(Rest Assured-API),Curl, HTTP client
- ❖ **Operating Systems :** (Linux –Red-Hat, Ubuntu, Mac OS X, Windows, Windows Server 2022)
- ❖ **DevOps Tools :** Docker, Vagrant, Consul, ELK stack, Ansible, Kubernetes, Terraform, docker swarm
- ❖ **Scripting Languages:** Bash
- ❖ **Mocking micro-services :** Mountebank, WireMock
- ❖ **Version Control Management :** (GitHub/Git, SVN)
- ❖ **Testing Tools:** qTest, VersionOne, JIRA, Quality Center,ADO
- ❖ **Web debugging:** Fiddler, Chrome Developer Tools
- ❖ **Continuous Integration & Build Tools :** ( Jenkins, Go, Apache Tomcat, Ant, Maven, SBT, Gradle)
- ❖ **Performance Testing:** (Gatling, Jmeter), New Relic, Graphana for Data visualization
- ❖ **Test & Defect Management :** (Version One, Jira, HP Quality Center)
- ❖ **Network Tools:** Wireshark
- ❖ **Microservices testing:** Pact
- ❖ **Development IDE :** (Intelij, Eclipse)

---

## ***PROFESSIONAL EXPERIENCE***

### ***UL, Bangalore, India (Princeton)***

**Senior Software Developer in Test, April 2022 to Current**

#### **Responsibilities & Accomplishments:**

- ❖ Setting up Automaton framework for UI tests using cypress and API Tests using Axios and Jest testing framework.
- ❖ Refactored the framework test-scripts and architecture to improve maintainability using SOLID design principles and Design patterns.
- ❖ Migrated the test scripts from Selenium 3 to Selenium 4 and set it up in fully distributed mode up to 75 parallel capacity
- ❖ Set up Docker-ElasticSearch / Logstash and Kibana for management of Automation framework and Jenkins logs.
- ❖ Setup Monitoring solution for automation servers and application/web/sql servers using Telegraf/InfluxDB and Grafana.
- ❖ Set up a reverse proxy server to hide URLs in Apache for Automation Tools.
- ❖ Used Ansible with Kerberos Authentication to manage automation remote machines. Created ansible tasks for configuration of those machines, including changing grid thread count, setting up Jenkins agents, killing Grid, restarting Grid, restarting machines, killing browser processes, automated installation of packages on windows boxes like git/chrome/firefox and getting system specs.
- ❖ Built a Spring boot Rest API with Authentication to allow automation users to control ansible tasks running on a Linux web server with MongoDB.
- ❖ Setup sonarqube for static code analysis in Jenkins

- ❖ Migrated Jenkins Jobs to Jenkinsfile for easier management of CI Pipelines
- ❖ Building powershell scripts for automated re-execution of automation test-scripts
- ❖ Setup InfluxDB and Grafana for real time test case execution status
- ❖ Integrated framework with Browserstack for parallel execution on browserstack infrastructure.
- ❖ Setup Docker-Sonatype-Nexus Repository for local management of maven dependencies

## ***UL, Princeton, New Jersey***

**Software Developer in Test**, July 2017 to March 2022

### **Responsibilities & Accomplishments:**

- ❖ Assumed responsibility of building multithreaded robust Java based framework with Selenium Web driver using Page Object Model and utilizing maven as a build automation tool, TestNG as the testing framework and setup Selenium Grid in the private cloud environment to scale the tests with Video Recording.
- ❖ Setting up Jenkins in master slave configuration with 6 agents / 3 executors and creating jobs for the UI and API automation tests and integrating them in DevOps CI/CD flow
- ❖ Build API Automation framework from scratch using Rest assured/ Cucumber/ Lombok and integrated in Jenkins pipelines
- ❖ Building web-service using Spring boot framework for automating the data setup of the automation test-suite and dynamically setting data in real time.
- ❖ Worked with SQL profilers to capture stored procedures and writing SQL queries for data setup.
- ❖ Build and hosted performance monitoring solution using Grafana/ Influxdb / Telegraf
- ❖ Writing and executing end to end performance tests using JMeter for learning management solutions and gathering results in real time on performance dashboard
- ❖ Used Bash/Python scripts for job configuration on Jenkins
- ❖ Writing SQL queries and running stored procedures for reports data-validation
- ❖ Debugging front-end applications using Chrome-developer tools

**Environment:** Restful Micro-services, ReactJS, JavaScript, NodeJS, Java, C#, Jmeter, Docker, Kubernetes, Ansible, NET Terraform, Vagrant, Consul, AWS, Grafana, Telegraf, Chronograf, InfluxDB, MongoDB, Jenkins, Oracle, GitHub, ELK Stack, Cypress

## ***HBC Digital, New York***

**Software Developer in Test**, August 2013 to June 2017

### **Responsibilities & Accomplishments:**

- ❖ Well versed in writing and maintaining automated test scripts suite
- ❖ Built a Front End Test-Suite using Selenium, TestNG and Maven for E-commerce applications
- ❖ Developed framework for testing micro-service APIs using Rest Assured and JUnit
- ❖ Gray box testing of micro-services and monitoring service logs inside docker containers and ELK-stack.
- ❖ Built mock services for mocking out external dependency on Order Management

- System using Mountebank and hosting in Docker containers
- ❖ Setup up Jenkins, build and run jobs for running automation and performance tests
  - ❖ Contributed to the building Distributed Performance Testing Framework using Gatling, Scala, InfluxDB, Graphana and writing end to end front-end performance tests.
  - ❖ Wrote performance tests for micro-services and used New Relic for performance monitoring.
  - ❖ Wrote SQL queries for data setup and data validation across different databases like MongoDB and Oracle and running ETL's for data sync
  - ❖ Used Appium to build tests for android ecommerce application
  - ❖ Used SOAP-UI for testing and mocking soap calls for back-end SOAP Services

**Environment:** Selenium Web Driver, jQuery, Play, Restful Micro-services, ReactJS, Gatling, Docker, Vagrant, Appium, Consul, AWS, IBM Sterling Order Management, New Relic, InfluxDB, MongoDB, ETL, Go, Jenkins Oracle, GitHub, Sauce Lab, SOAP UI, Mountebank, Pact, ELK Stack, J2EE, weblogic

## *Infosys Technologies Ltd*

**QA Automation Engineer**, January 2007 to November 2011

### **Responsibilities & Accomplishments:**

- ❖ Performed Automated GUI Testing, Test methodologies, preparation of test data, preparation and execution of regression test scripts, preparation of weekly status report
- ❖ Used detailed knowledge of application features and functions to assess scope and impact of business needs throughout analysis and completion of all enhancement specifications.
- ❖ Created automated test framework using Descriptive Programming for reusable, easy to use and maintain test scripts.
- ❖ Used Quality Center as the test repository for executing test cases and scripts for logging and generating various reports and graphs for further analysis
- ❖ Wrote SQL queries to test data integrity and performed database testing for the application

**Environment:** RFT (Rational Functional Tester), Quality Center, HTML, Oracle, SVN

---

## **EDUCATION**

### **Master's in Electrical Engg.**

San Jose State University, San Jose ,CA  
December 2013

### **Bachelor's in Electrical Engg.**

BMS of College of Engg., Bangalore, IN  
June 2007
