WORK EXPERIENCE

Software Development Engineer - 2

Jellybean.Life

08/2023 - Present

Bangalore

Established in 2021, Jellybean is a trailblazing startup, redefining employee benefits and wellness platforms. Dedicated to transforming how organizations prioritize well-being, Jellybean provides a comprehensive, user-friendly solution for both employers and employees, revolutionizing the workplace experience.

Achievements/Tasks

- **Mobile App:** As an Engineer at Jellybean, I lead our **React Native Expo** project. I take on the responsibility of managing the team developing the app, providing guidance and support as they navigate the intricacies of mobile app development within the Jellybean environment. This project was a requirement for one of the main client in the company and this helped us in getting more clients, since accessibility was very important for such a product. The Mobile app solved that problem
- **Web Application:** We built a web application project using **Next.js**, where I focused on building various modules. Utilizing **React Query** for efficient data management and **Tailwind CSS** for a clean and customizable UI, we integrated **GraphQL** for specific functionalities. **Authentication** was implemented through **Next-Auth**, prioritizing security and user access control

Software Development Engineer 1

Synaptic

03/2021 - 07/2023

Gurgaon

Synaptic is a product based company, Which integrates various datasources like glassdoor, Similarweb (website traffic) into one platform and sells this product to Venture Capitals for them to do market analysis

Achievements/Tasks

- **Mobile App:** Worked on **design system** for **Android** and **IOS** platform, Created several components and many user flows. Added **event tracking** in almost all the screens and all the features. Collaborating with Design, Backend, Product teams to finish the entire application within four months. This product was used at a **Venture Capitals** event in Berlin which was the main focus of the company during that time, This product brought us four more clients during that period
- **Event Tracking:** Worked closely with the product team and analytics team to Implement event tracking on several modules in the **web application**. We were using concepts like **Context Wrapping and Higher Order Components** to wrap parameters needed for specific events. Captured data was sent to **SEGMENT**. This project helped the analytics team analyse the patterns of the user through the entire product and this was used by the product team and design team to make it more accessible
- **Chrome Extension :** Built a chrome extension, where users can browse any website and with the click of a button. They would be able to get **KPIs** of the company that owns the domain. Worked on interesting concepts like **Shadow DOM, Message passing, Background scripts and Content scripts**. This project opened a new domain in how a client interacts with the product
- **Web Platform :** Onboarded several datasources (Glassdoor, Website Engagement) to the web platform. Used **Echarts** library to build several types of graphs like **Line Chart, Bar Chart and Mixed Charts**.
