SUMMARY

Dynamic and detail-oriented software engineer with extensive experience in service development and a strong background in optimizing systems and infrastructure components. Passionate about leveraging cutting-edge technologies, including configuration and maintenance of applications, and mentoring others. I am eager to take on challenges that allow me to apply both my technical and interpersonal skills effectively, particularly in documentation and fleet management.

EXPERIENCE

Oracle Cloud Infrastructure

Oct '21 — Present

Member Of Technical Staff

- **As a devops engineerled end-to-end service development & integration**, from requirements gathering to deployment, enhancing functionality with 5+ major features, while ensuring robust documentation.
- **Spearheaded efforts to achieve 99.99% service availability**, reducing downtime by 40% through robust object oriented design, implementation, and operational best practices, utilizing configuration management.
- **Integrated service health and API observability metrics into monitoring systems**(Grafana), improving troubleshooting speed by 25% and operational efficiency across the team, focusing on infrastructure components.
- **Designed, optimized, and automated alarms for KPIs and service-critical metrics**, enabling proactive issue detection and reducing incident response times by 30%.
- **Developed comprehensive runbooks and conducted 10+ intra-team sessions**, leading to a 50% improvement in on-call monitoring efficiency.
- **Automated legacy workflows**, cutting on-call issue resolution time by 10+ hours per week, significantly improving team productivity and maintenance efficiency.
- **Mentored new joiners**, providing structured guidance and hands-on support to help them achieve full productivity within 3 months, improving team capacity.
- **Created proof-of-concepts (POCs) around Kubernetes** to explore reducing service startup time by 50%, showcasing potential for enhanced service agility and performance.

PayPal

Jul '20 — Oct '21

Software Engineer 2

Bangalore

- **Successfully migrated 100+ rules built on the ODM rule engine to a more efficient system**, reducing processing time by 20%.
- **Conducted extensive load and performance testing with a 99.63% success rate**, ensuring high system reliability and readiness for production environments, focusing on storage systems.
- **Implemented the Java RuleBook framework leveraging lambda expressions**, simplifying rule-based logic and improving maintainability by 30%.
- **Designed and implemented a decisive planning framework**, enhancing system decision-making accuracy and scalability for 5+ critical use cases.
- **Onboarded the application onto a system capable of handling 10% of live traffic for N+1 version testing**, ensuring stability and performance before going live, with a focus on fleet management.
- **Developed a meticulous functional test framework that achieved 85%+ line coverage**, significantly improving test reliability and defect detection.

JP Morgan Chase & Co.

Jul '18 — Jul '20

Software Engineer

Mumbai

- **Developed a batch job processor to handle millions of pending payments**, reducing processing time to less than an hour, ensuring seamless infrastructure operations.
- **Designed and implemented in-house security protocols based on OAuth**, mitigating significant security risks and ensuring compliance, with a focus on system components.
- **Leveraged Kafka to streamline inter-module communication**, improving system performance and reliability, while maintaining robust system documentation.
- **Enhanced deployment efficiency** by 50% through involvement in deployment activities using an in-house Jenkins wrapper, focusing on maintenance protocols.
- **Monitored performance with Grafana**, processing 10K+ protobuffs weekly, ensuring optimal system functionality, leveraging storage systems for efficiency.
- **Achieved 90%+ test coverage by implementing JUnit**, ensuring robust and reliable code quality, with a focus on Computer Science principles.

SKILLS

Relevant Skills Documentation, Configuration, C++

Programming Languages Java, JavaScript, Ember.js, JSON, HTML

Databases MySQL, RDBMS, NoSQL

Frameworks & Tools Dropwizard, Grafana, Spring Boot

Cloud and DevOps Kubernetes, Terraform, KAFKA, Docker

Misc RESTful API, Cloud-Native Infrastructure, Object Oriented Design, OOPS, Design Patterns, Automation Tools
